

Is pappcorn.com a scam? TrustSniffer's high-risk assessment: 0/100

pappcorn.com

Verdict

0

OUT OF 100

CRITICAL RISK

pappcorn.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

PappCorn is a LATAM-focused startup studio and product+technology partner offering staged engagements from idea validation to scale. The site describes process, principles, track record, programs and provides a contact email for inquiries.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

Malware engines	5 flagged it VirusTotal	RISK

The page as captured

<https://pappcorn.com/>

What pappcorn.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2013.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Fortinet, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

PappCorn is a LATAM-focused startup studio and product-technology partner that presents staged support for founders from idea validation through MVP development, traction, and scale. The homepage describes an integrated product-partner model rather than a conventional agency, supported by applied AI, consulting, and technology delivery, and displays claims of more than 14 years of activity, over 700 projects, and 95% recurring engagement.

Scam/Impersonation Risk

The site's presentation is coherent and corporate, and the supplied page analysis found no login form, credential-harvesting mechanism, aggressive payment flow, or direct brand-impersonation indicator. However, those benign page-level characteristics are outweighed by confirmed external threat detections and a confirmed blacklist status. Five malicious detections and one suspicious detection were recorded, including findings from Fortinet and Sophos. The abuse reporting relates to the served IP and is attributed to shared infrastructure rather than specifically to the website, but it remains a material adverse signal. No separate identity

contradiction or direct phishing finding was identified in the supplied page content; nevertheless, the confirmed blacklist and malicious detections require a clearly restrictive posture for sensitive interaction.

EVIDENCE

- Domain registration record: Registered 2012-02-28 (~14.48 years old), with GoDaddy.com, LLC identified as registrar.
- Historical coverage is sparse but spans 2013-06-14 through 2026-06-11, representing 14 years tracked; no suspicious repurposing or semantic category change was identified.
- External assessment recorded 5 malicious detections and 1 suspicious detection, with blacklist status confirmed and Fortinet and Sophos among the flagged vendors.
- The homepage was classified as corporate/consulting, with no login form, hidden form, password-external form, wallet connection, or credential-harvesting behavior observed.

Regulatory Verification Notes

The available site content describes a paid consultancy and startup-studio business, but it does not present a license authority or registration number. That is a regulatory-disclosure gap requiring verification rather than, by itself, evidence of fraud. The operator's real-world identity is not independently verified by the supplied evidence, so the business claims should remain treated as on-site representations. The external broker-reputation dataset returned no name match, which provides no additional corroboration and is not a licensing determination.

EVIDENCE

- Homepage business copy identifies staged product and technology engagements but does not state a licensing authority or license number.
- Transport encryption uses a DV certificate issued by WE1, valid to 2026-11-15.
- The site is served through AS13335, CLOUDFLARENET - Cloudflare, Inc., US.
- GoDaddy.com, LLC is identified as the domain registrar; no independently verified legal-entity linkage is established in the supplied evidence.

What to Verify Next

Before any sensitive engagement, an independent party should confirm the operator's legal name, physical business presence, contracting entity, and payment beneficiary through records outside the website. Any licensing or registration requirement applicable to the proposed service should be checked directly with the relevant jurisdictional registry. Contact channels should be confirmed through an independent route, and any proposed contract should specify deliverables, ownership of work product, refund or termination terms, and dispute resolution before funds or confidential information are provided.

EVIDENCE

- The homepage provides service descriptions and engagement claims but does not independently verify the contracting entity.
- The contact page is presented as an inquiry route rather than as independent proof of corporate identity.
- The available content does not state a license authority or registration number.
- The site analysis found no sensitive submission form, so proposed payment or document-sharing workflows would need separate validation.

Summary Verdict

The overall posture is **critical**, with the site unsuitable for sensitive interaction on the evidence available. Its polished corporate presentation and technically functional web experience do not overcome the confirmed external reputation contradictions, while operator identity remains unverified.

Infrastructure Integrity

Cloudflare CDN/WAF protection is present, and all observed addresses were CDN edge servers; no origin candidate was observable in the analysis. This provides a mitigating layer against direct origin exposure but is not evidence that the underlying operator or content is legitimate.

Closing Assessment

Prospective users should restrict activity to passive review and refrain from login, credential submission, financial transfers, or disclosure of confidential information unless independent identity, contractual, and regulatory checks materially resolve the identified concerns.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Signals weighed against the site

- AbuseIPDB: 49 reports on hosting IP 185.158.133.1 (Internet Utilities Europe and Asia Limited, Content Delivery Network), 45% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of pappcorn.com.

- The request stayed on pappcorn.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by dns-parking.com, across 2 name servers. NOTED
- The registration is paid up to 2027-02-28. NOTED
- The earliest public archive of this site is from 2013-06-14. CLEAR
- It is hosted on CLOUDFLARENET, from a server in AE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about pappcorn.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
