## Key findings

---

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.

## Full analysis

---

### Overview

This Finnish-language corporate payment website presents PaysafeCard prepaid codes, PaysafeWallet account services, online payment support, fees, limits, and app access, with the apparent purpose of enabling consumers to purchase prepaid value and conduct online payments, transfers, and related card transactions.

### Scam/Impersonation Risk

No contradictions were observed. The site's content is consistent with a coherent Paysafe payment-service identity: it explains prepaid-code purchasing, wallet functionality, balance checking, support, fees, and payment limits without detected phishing, impersonation, or other page-level red flags. External reputation checks identified no malicious or suspicious detections, while the domain has a top-tier global traffic footprint, supporting the conclusion that this is an established service rather than an opportunistic imitation.

#### EVIDENCE

- The Finnish homepage identifies PaysafeCard and describes prepaid-code purchases, PaysafeWallet, balance checking, support, fees, and limits; no page-level red flags were detected.
- The login and registration flows are presented as part of the same payment-service site, with no untrusted form destination, hidden form, wallet-drainer behavior, or brand-impersonation indicator observed.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no blacklist or phishing result; the measured traffic rank was 7147 and the domain was within the top 1 million.

### Regulatory Verification Notes

The identity presentation is internally consistent with a corporate payment provider. The site references the Central Bank of Ireland and Mastercard, and its business model is clearly described around prepaid codes, wallet services, associated fees, and a debit Mastercard. No license number or independently verified authorization is supplied in the available evidence, so regulatory status should be treated as a verification item rather than inferred solely from those references. The domain's long registration history, reputable corporate registrar, valid transport encryption, established traffic footprint, and coherent product disclosures provide strong legitimacy support. The site was registered through MarkMonitor Inc., a recognized corporate registrar.

#### EVIDENCE

- The homepage and support content describe PaysafeCard prepaid codes, PaysafeWallet, app access, fees, limits, and payment assistance in a consistent corporate context.
- The legal or regulatory references include the Central Bank of Ireland and Mastercard; no license number is stated in the available page evidence.
- The domain was registered on 2000-03-12 and is 26.43 years old; registration is recorded through MarkMonitor Inc.
- The site is served on AS16509, AMAZON-02 - Amazon.com, Inc.; its TLS certificate is Amazon RSA 2048 M04, DV validation, valid through 2027-02-09.

#### What to Verify Next

The applicable Central Bank of Ireland authorization and the relevant Mastercard program relationship should be confirmed through the institutions' official public channels where regulatory assurance is required. Before material transactions, the applicable fees, limits, account terms, and consumer-support procedures should be reviewed on the site's support and terms pages. Official support and contact channels should also be confirmed through an independent Paysafe corporate route.

#### EVIDENCE

- The homepage provides dedicated support, frequently asked questions, fees, and limits sections.
- The site links to Mastercard and the Central Bank of Ireland as external institutional references.
- The site provides separate registration, login, balance-checking, and support paths for the payment services described.

#### Summary Verdict

This is a legitimate, established, and trustworthy corporate payment website with a high-confidence normal-use posture. Its consistent identity, mature service presentation, clean reputation, and convergent technical signals support ordinary interaction, including account login and standard account or payment actions.

#### Infrastructure Integrity

The website is protected by AWS CloudFront CDN/WAF infrastructure, with observed traffic handled through Amazon edge services. This provides a meaningful mitigating control for availability and perimeter exposure, although protective hosting is appropriately treated as supporting infrastructure rather than standalone proof of legitimacy.

#### Closing Assessment

Engagement may proceed through the site's standard workflows, with routine review of transaction details, fees, and applicable account terms before completing material payments.

Written analysis generated 2026-08-10 by the TrustSniffer Analysis Engine from the evidence in this report.

#### What the analysis found

No rule findings contributed to this verdict.

## Identity verification

|                                  |        |
|----------------------------------|--------|
| Status                           | LIKELY |
| Identity score                   | 76/100 |
| Identity verification confidence | 76%    |

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

## What TrustSniffer observed

First-party facts recorded during the assessment of paysafecard.com.

- The request stayed on paysafecard.com. It was not redirected to another domain. CLEAR
- Registration is published under MarkMonitor Inc.. CLEAR
- DNS for this domain is served by awsdns-24.org, across 4 name servers. NOTED
- The registration is paid up to 2027-03-12. NOTED
- It is hosted on AMAZON-02, from a server in US. NOTED

## About this assessment

A trust score summarises the evidence TrustSniffer could collect about paysafecard.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
