Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2004.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Paystack.com is a corporate payments and financial-technology website presenting online and offline payment processing, developer services, documentation, pricing, business resources, and regional support for African businesses. Its apparent business model is transaction-based payment infrastructure and related enterprise services.

Scam/Impersonation Risk

No contradictions were observed across the available evidence: there were no phishing, impersonation, malicious-content, or conflicting-identity indicators. The homepage presents a coherent corporate payments proposition, with product navigation, developer documentation, customer resources, pricing, locations, compliance content, support, and account-access functions. The site also has a long-running historical presence and a clean external reputation profile, which converge with the page content to support an apparently legitimate, established website. The real-world operator identity remains independently unverified, so the legitimacy assessment is evidence-consistent rather than identity-proven.

EVIDENCE

- The homepage is classified as a corporate payments site and describes card, bank-transfer, USSD, mobile-money, POS, and developer-API services with no page-level red flags.
- Historical records show 2,007 archive snapshots spanning 2004–2026, covering 23 years.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, no malicious search-safety result, and no abuse reports; the domain is ranked 53,816 globally and is within the top 1 million.
- The homepage's login and signup forms have no hidden forms, no external password destination, and no wallet or clipboard-hijacking behavior.

Regulatory Verification Notes

The site provides dedicated About, Compliance, Contact, Pricing, and developer-documentation areas, indicating a substantial operational disclosure framework. Its stated service is payment processing for businesses, including the collection and movement of funds through several payment rails, so the relevant licensing and registration position depends on the jurisdictions and services involved. No license authority or license number is disclosed in the supplied site analysis; this is a verification gap rather than evidence of deception. The homepage also states that more than 200,000 businesses trust Paystack and promotes rapid

business registration and access to a corporate bank account; these are on-site commercial claims and should not be treated as independently verified regulatory or customer evidence.

EVIDENCE

- The homepage title identifies the service as “Paystack - Modern online and offline payments for Africa,” with navigation to About Us, Compliance, Contact Us, Pricing, and developer documentation.
- Domain registration records show registration on 2011-07-28 through Amazon Registrar, Inc., with an age of 15.05 years and expiry on 2027-07-28.
- Hosting telemetry records service from AS13335, CLOUDFLARENET - Cloudflare, Inc., US.
- The site's transport encryption uses a WE1-issued DV TLS certificate valid to 2026-10-04T16:51:31+00:00.

What to Verify Next

Before credential or payment interactions, an enterprise user should independently confirm the legal entity operating the relevant service, determine which regulatory permissions apply to the intended jurisdiction and product, and check the applicable customer terms, dispute process, and payment-protection arrangements. Contact channels should also be confirmed through an independently sourced corporate channel rather than relying solely on information encountered during an initial visit.

EVIDENCE

- The site exposes Login, Create free account, Contact Us, Support, Pricing, and Compliance paths from the homepage.
- The homepage identifies multiple operating markets, including Côte d'Ivoire, Egypt, Ghana, Kenya, Rwanda, and South Africa, making jurisdiction-specific verification relevant.
- The site provides developer documentation, integrations, status information, and customer-support content suitable for comparing operational details against independently obtained business information.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture. No scam or impersonation contradictions were observed. The classification remains subject to the stated limitation that the real-world operator identity has not been independently verified.

Infrastructure Integrity

Cloudflare CDN and WAF protection materially reduce direct exposure of the service infrastructure and provide a conventional defensive edge layer. All observed addresses were CDN edge addresses, and no origin server address was identified in the analysis; this is a mitigating infrastructure characteristic, not proof of legitimacy.

EVIDENCE

- The site is protected by Cloudflare CDN/WAF infrastructure with 5 observed edge IP addresses and 0 likely origin IP addresses.
- The observed edge addresses include 104.18.8.49, 104.18.9.49, 216.198.79.1, and 2606:4700::6812:831.
- The infrastructure is recorded as trusted CDN service with resolution status “resolved.”

Closing Assessment

Normal business evaluation may proceed, provided ordinary independent checks of legal identity, applicable permissions, customer terms, and payment protections are completed before credentials or funds are committed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of paystack.com.

- The request stayed on paystack.com. It was not redirected to another domain. CLEAR
- Registration is published under Amazon Registrar, Inc.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-07-28. NOTED
- The earliest public archive of this site is from 2004-11-29. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about paystack.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
