

Is permajacktulsa.com legit? TrustSniffer's high-trust assessment: 90/100

permajacktulsa.com

Verdict

90

OUT OF 100

HIGH TRUST

permajacktulsa.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 50%.

What this site appears to be

Commercial website for Perma Jack Systems of Tulsa offering foundation repair solutions (steel piers, foam injection, slab repairs). Provides phone numbers, physical address, service area, warranty and insurance information, and a blog. Appears to be a local, established contractor.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What permajacktulsa.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2010.
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.

Full analysis

Overview

Perma Jack Systems of Tulsa is a commercial local-service website for a foundation-repair contractor serving homeowners in the Tulsa-area market, presenting repair services, service locations, estimates, warranties, customer reviews, and educational content.

Scam/Impersonation Risk

No contradictions were observed: the available evidence shows no phishing, impersonation, confirmed blacklist, malicious-content, or credential-harvesting indicators. The site's stated business model is conventional home-repair contracting, with steel piers, foam injection, interior slab repair, and related concrete and foundation services rather than a high-risk financial or cryptocurrency offering. Marketing claims such as "over 50 years" of service, repairs for "thousands" of foundations, and the "best foundation repair system available" are promotional assertions rather than independent proof of corporate identity, but they do not create an identity contradiction. A small number of abuse reports were associated with shared Amazon delivery infrastructure; the attribution confidence was zero and the signal was discounted because it applied to shared provider infrastructure, so it is not treated as evidence of site-level abuse.

EVIDENCE

- The homepage and service pages describe foundation repair, steel piers, foam injection, slab repair, foundation cracks, sunken driveways, and uneven sidewalks, with no detected phishing or impersonation indicators.
- The contact and booking areas present a business telephone number, physical address, service locations, estimates, warranty information, and customer-review content; no sensitive login or password form was detected.
- Historical domain evidence records 16 years tracked, from 2010-09-04 to 2025-07-13, with no detected repurposing or semantic drift.
- External reputation evidence records 2 abuse reports against shared Amazon infrastructure, attributed to the provider IP rather than specifically to the website, with a confidence score of 0.

Regulatory Verification Notes

The website appears consistent with an established local contractor, but the real-world operator identity is not independently verified by the available evidence. Its pages describe local ownership, insurance-related information, transferable warranties, service areas, and customer-facing contact details; these support commercial transparency but do not independently establish the legal entity. No contractor license or registration number is claimed in the supplied site content, leaving a licensing-disclosure gap for ordinary regulatory verification rather than a scam finding. The available broker-reputation context contains no matching record, and the site's page content contains no identified red flags.

EVIDENCE

- The homepage, About, Contact, FAQ, and service content identify "Perma Jack Systems of Tulsa," describe local ownership and Oklahoma service history, and provide contractor-facing warranty and insurance information.
- The domain was registered on 2005-07-14 and is approximately 21.12 years old; registration is through GoDaddy.com, LLC, with expiration recorded as 2032-07-14.
- The site is served from AS16509, Amazon.com, Inc.; its TLS certificate is issued by YR1 at DV validation level and is valid to 2026-08-31 15:34:17 UTC.
- No matching entry was returned in the supplied broker-reputation context.

What to Verify Next

Before credential or payment interactions, an organization considering engagement should independently confirm the contractor's legal business identity and any applicable Oklahoma or local contractor licensing through the relevant public registry. The physical business details and contact channels should be confirmed through an independent source, and the written estimate should be reviewed for warranty scope, insurance responsibilities, cancellation terms, dispute handling, and payment protections.

EVIDENCE

- The site's Contact and About pages provide the identity and location details that should be matched against an independent business or government registry.
- The service and warranty content supplies the contractual subjects—repair scope, transferable warranty, estimates, and insurance-related claims—for review before authorizing work.
- The absence of a claimed license number in the supplied content identifies the specific item requiring external regulatory confirmation.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for its stated local-service purpose. The conclusion is strong at the website-risk level, while the operator's real-world identity remains an unverified qualification rather than a proven fact.

Infrastructure Integrity

The site benefits from CDN/WAF protection, with observed edge infrastructure on AS14618 operated by Amazon.com, Inc. All observed addresses were CDN edge servers and no origin candidate was identified; this reduces direct origin exposure and is a mitigating infrastructure characteristic, not proof of legitimacy.

Closing Assessment

Ordinary engagement is proportionate, provided independent business-identity, contractual, and payment-protection checks are completed before credentials or payment details are supplied.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Signals weighed against the site

- AbuseIPDB: 2 reports on hosting IP 13.248.175.166 (Amazon Technologies Inc., Content Delivery Network), 0% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of permajacktulsa.com.

- The request stayed on permajacktulsa.com. It was not redirected to another domain. [CLEAR](#)

- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by domaincontrol.com, across 2 name servers. NOTED
- The registration is paid up to 2032-07-14. CLEAR
- The earliest public archive of this site is from 2010-09-04. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about permajacktulsa.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
