

Is piponi.com a scam? TrustSniffer's high-risk assessment: 0/100

piponi.com

Verdict

0

OUT OF 100

CRITICAL RISK

piponi.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Assessed 2026-08-22 by automated analysis. Classification confidence 55%.

What this site appears to be

A small personal site (piponi.com) presenting tools, recipes, and books. Mostly private content with a few public items to share. No forms, monetization, or contact details visible.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

A small, personal set of tools — cooking, books, and a few things I like to keep to hand. Mostly private; a

What piponi.com served when TrustSniffer captured it on 2026-08-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2002.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Security Alert

Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

piponi.com is a small personal website presenting cooking recipes, books, reading notes, and a few privately maintained tools, with an apparently non-commercial purpose and no visible request for payment or sensitive information.

Scam/Impersonation Risk

The site's visible presentation is consistent with a personal blog or portfolio: the homepage describes personal tools, cooking, and books, and automated inspection found no login form, payment mechanism, deceptive redirect, wallet interaction, or obvious impersonation content. However, this benign page-level appearance is outweighed by a material external security contradiction: the domain has been recorded by multiple external sources as blacklisted, with multiple malicious detections. The long registration history and absence of suspicious historical repurposing do not neutralize that finding. No separate conflicting legal identities or direct brand-impersonation indicators were observed. Evidence:

- The homepage presents “tools, recipes, and books” and states that the site is mostly private, with selected items made public.
- The homepage contained no forms, login elements, sensitive-input fields, external submissions, wallet activity, or suspicious script behavior during the observed interaction.
- External reputation assessment recorded 11 malicious detections and a confirmed blacklist hit.
- Domain registration: 2006-07-31T22:12:14Z; age 20.07 years; registrar Name SRS AB. Archive coverage recorded 41 snapshots spanning 2002–2025, with 24 years tracked.

Regulatory Verification Notes

The site presents as a personal website rather than a regulated financial, brokerage, or payment service. Its navigation exposes Home, Recipes, and About content, but the supplied page evidence does not independently verify the real-world operator behind the domain. No licensing claim, license number, or regulated-service disclosure is presented; for this apparent business model, that is a transparency limitation rather than evidence of fraud. The absence of visible contact details and the sparse homepage content also limit the ability to establish accountability from the site itself. Evidence:

- The homepage identifies the site as piponi.com and describes personal tools, cooking, books, and notes.
- The page analysis classified the site as a personal or portfolio website with no visible monetization or sensitive-input request.
- The homepage contained approximately 223 characters of visible text and no visible contact details, forms, or licensing information.
- Page metadata consisted primarily of the title “piponi.com,” without a supplied meta description or structured identity markup.

What to Verify Next

Before any interaction beyond passive viewing, an independent security control should confirm that the domain is not being blocked or redirected in the intended environment. Any proposed login, credential submission, download, payment, or other sensitive action should be deferred unless the domain’s current security status and the operator’s identity can be confirmed through an independent, offline channel. Evidence:

- The authoritative assessment identifies sensitive interaction risk despite the site’s non-commercial presentation.
- The site’s transport layer is valid, but certificate validity alone does not establish operator identity or content safety.
- The site has no visible login or payment workflow on the observed homepage, so any later request for such information would represent a materially different interaction surface.

Summary Verdict

The available evidence supports a **critical trust posture** for sensitive interaction. The site appears benign in its visible content and mechanics, but confirmed external malicious detections and blacklist status create a decisive security concern that prevents the website from being treated as trustworthy for credentials, financial activity, or other sensitive use.

Infrastructure Integrity

The website is protected by a CDN/WAF layer, and resolution includes CDN edge servers as well as potential origin candidates. The hosting infrastructure is served through CYBERCON, while the protective edge layer

provides some exposure mitigation; neither infrastructure control is proof of legitimate ownership or safe content.

EVIDENCE

- Hosted on AS7393 (CYBERCON - CYBERCON, INC., US), with the observed infrastructure registered in the Netherlands.
- The site uses a CDN/WAF layer with 5 observed edge IPs and 3 potential origin candidates across 8 unique IPs.
- TLS certificate issued by YR2 with DV validation, valid to 2026-11-02T19:43:10+00:00.

Closing Assessment

Prospective users should limit activity to passive viewing and should not provide credentials, financial information, or other sensitive data unless the domain’s security status and operator can first be independently confirmed.

Written analysis generated 2026-08-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

1 finding contributed to this verdict, raised by analysis engine, external reputation.

01 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of piponi.com.

- The request stayed on piponi.com. It was not redirected to another domain. CLEAR
- Registration is published under Name SRS AB. CLEAR
- DNS for this domain is served by hostek.com, across 2 name servers. NOTED
- The registration is paid up to 2027-07-31. NOTED

- The earliest public archive of this site is from 2002-07-19. CLEAR
- It is hosted on CYBERCON, from a server in NL. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about piponi.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
