Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1999.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an official-looking Greek retail and corporate banking portal presenting Piraeus Bank-branded services, digital banking access, customer support, financial products, and corporate responsibility information; its apparent business model is conventional banking through deposits, lending, cards, fees, insurance, and investment services.

Scam/Impersonation Risk

No scam, phishing, blacklist, impersonation, or conflicting-identity indicators were observed. The site presents coherent banking content across its retail, support, e-banking, and corporate-responsibility areas, with no sensitive form, hidden form, wallet activity, cloaking, or credential redirection detected during technical interaction. Automated inspection did observe external requests and posts, including some destinations not classified as trusted, but this behavior was not accompanied by an abuse pattern and the site remained technically stable. External reputation checks were clean, and the established traffic footprint further supports an apparently legitimate site rather than a fraudulent operation.

EVIDENCE

- The homepage and retail-banking pages describe deposits, mortgage and consumer loans, cards, insurance, investments, e-banking, and customer support without identified fraud indicators.
- The site's transport and interaction behavior showed no login form, hidden sensitive form, wallet connection, clipboard manipulation, or cloaking.
- Domain registration continuity indicates a domain registered in 1999, approximately 26.70 years old; historical coverage comprises 657 archive snapshots spanning 1999–2025 across 27 tracked years.
- External reputation checks recorded no malicious or suspicious detections and no blacklist or phishing hit; the site is within the global top one million by traffic, with a recorded rank of 19717.

Regulatory Verification Notes

The available pages are consistent with a mature banking institution, but the real-world operator identity is not independently verified by this assessment. The reviewed site content does not present a licensing authority or license number, leaving regulatory authorization unclear as a disclosure matter rather than evidence of a scam. A third-party broker dataset matched the domain exactly to "PIRAEUS BANK" in Greece and recorded "No Regulation" with no license found; this is a reputational and verification signal only, not a legal or regulatory determination. The broader convergence remains favorable: the site has a long-established domain history,

substantial archival continuity, a strong traffic footprint, clean external reputation, and an organization-validated TLS certificate.

EVIDENCE

- The site's retail, business, group, support, and corporate-responsibility pages consistently present Piraeus Bank-branded banking services and institutional information.
- The site's hosting infrastructure is served from AS19551, operated by INCAPSULA - Incapsula Inc, US.
- The TLS certificate is issued by DigiCert Global G2 TLS RSA SHA256 2020 CA1, uses OV validation, identifies Piraeus Bank SA as the subject organization, and is valid to 2026-10-11T23:59:59+00:00.
- The independent broker-context record matched piraeusbank.gr by exact domain and reported "No Regulation" and no license found; the record expressly treats this as contextual rather than a legal or financial verdict.

What to Verify Next

Before credential or payment interactions, an independent party should confirm that the domain is the institution's official digital channel using contact details or published communications obtained through an offline or separately trusted route. The applicable banking authorization and the legal entity responsible for any specific service should be checked against the relevant official registry, while account holders should use the institution's established support and incident-reporting procedures for any suspected account activity. Standard payment-protection, dispute, and transaction-monitoring arrangements should also be confirmed before material financial activity.

EVIDENCE

- The support pages provide assistance and guidance for lost cards or suspected account activity.
- The e-banking and digital-solutions pages identify the account-access functions that should be reached through independently confirmed official channels.
- The site's product and institutional pages provide the basis for checking the responsible legal entity and applicable authorization for a particular service.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a low-risk trust posture. The assessment does not independently verify the real-world operator identity, so legitimacy should be understood as evidence-consistent rather than proven.

Infrastructure Integrity

The website is protected by Incapsula's CDN/WAF infrastructure. The observed addresses were CDN edge servers, and no origin-server candidate was identified; this reduces direct exposure of the underlying hosting environment but is a mitigating control, not proof of legitimacy.

Closing Assessment

Ordinary use is proportionate to the assessment, subject to independent identity, transaction-protection, and service-specific checks before credentials or payments are submitted.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of [piraeusbank.gr](#).

- The request stayed on [piraeusbank.gr](#). It was not redirected to another domain. [CLEAR](#)
- The earliest public archive of this site is from 1999-11-28. [CLEAR](#)
- It is hosted on INCAPSULA, from a server in US. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about [piraeusbank.gr](#) at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
