

Is plala.or.jp legit? TrustSniffer's high-trust assessment: 100/100

plala.or.jp

Verdict

100

OUT OF 100

HIGH TRUST

plala.or.jp appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-17 by automated analysis. Classification confidence 55%.

What this site appears to be

Japanese ISP support page with navigation for webmail, account management (マイページ), maintenance and outage notices, and regional area selections. No signs of phishing or financial solicitation.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is a Japanese-language internet service provider support and customer-management portal presenting webmail, account administration, service information, maintenance notices, outage updates, security settings, and regional support options. Its apparent business model is subscription-based connectivity and related ISP services rather than financial solicitation or high-risk investment activity.

Scam/Impersonation Risk

No contradictions were observed. The reviewed homepage presents coherent ISP-support content, including customer notices, maintenance information, service management, webmail, and regional support, with no phishing indicators, financial solicitation, suspected brand impersonation, or malicious behavioral activity identified. External reputation checks returned no malicious or suspicious detections, and the domain has long registration continuity. The available evidence therefore supports an apparently legitimate, established website, while the real-world operator identity remains independently unverified.

EVIDENCE

- The homepage is categorized as an ISP support/customer portal and contains no observed phishing indicators or sensitive-form submission.
- The homepage presents service-specific content including webmail, customer account management, maintenance notices, outage information, and regional support selections.
- The domain was registered on 1996-07-24 and is 30.08 years old.
- External checks recorded 0 malicious detections, 0 suspicious detections, and 0 abuse reports.

Regulatory Verification Notes

The site's content is consistent with an ISP support operation, but the reviewed page does not visibly provide a license number, regulator, or other specific regulatory authorization. This is a verification and disclosure gap rather than evidence of deception; the available material does not establish whether a particular regulated authorization is applicable to the service. The operator's real-world identity is not independently verified, so on-site service presentation should not be treated as conclusive proof of corporate identity.

EVIDENCE

- The reviewed support page contains no visible license number or named regulator.
- The site uses a valid OV TLS certificate issued by DigiCert Global G2 TLS RSA SHA256 2020 CA1, with validity through 2027-03-12.
- The page presents a corporate ISP-support model with subscription and service-fee revenue rather than a financial-investment offering.

What to Verify Next

Before credential or payment interactions, an independent corporate source should be used to confirm that the site is the official service portal and that the relevant account or billing destination is authorized. The applicable service terms, cancellation or service-ending provisions, customer-support channels, and payment-protection arrangements should also be checked through independently sourced information. Where the service is subject to sector-specific oversight, authorization should be confirmed with the relevant official registry.

EVIDENCE

- The support page includes account-management and billing-related functions, making independent confirmation of the official portal appropriate before sensitive actions.
- The page states that new applications for certain connectivity services have ended, so current service availability and customer status should be confirmed through an independently sourced channel.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website with a high-trust, low-risk posture. Longstanding domain continuity, clean external reputation, coherent ISP content, and sound transport security converge in support of that assessment. The operator's identity is not independently verified, so legitimacy is supported by the evidence but not proven as a real-world corporate attribution.

Infrastructure Integrity

Confirmed technical evidence places the site on AS4713, operated by OCN - NTT DOCOMO BUSINESS, Inc. in Japan, with a resolved direct hosting posture and no CDN or WAF identified. The directly attributable hosting environment is a useful infrastructure consistency signal, although hosting arrangements alone do not prove legitimacy.

EVIDENCE

- Served from AS4713, OCN - NTT DOCOMO BUSINESS, Inc., Japan.
- The infrastructure resolved to one IP address, with 1 unique IP and 0 edge IPs identified.
- No CDN was detected.

Closing Assessment

Normal browsing and ordinary service use are proportionate to the available risk assessment; before submitting credentials or making payments, independent confirmation of operator identity, service terms, and payment protections remains appropriate.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of plala.or.jp.

- The request stayed on plala.or.jp. It was not redirected to another domain. CLEAR
- DNS for this domain is served by or.jp, across 3 name servers. NOTED
- It is hosted on OCN, from a server in JP. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about plala.or.jp at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
