

Is plus.rtl.de legit? TrustSniffer's high-trust assessment: 100/100

plus.rtl.de

Verdict

100

OUT OF 100

HIGH TRUST

plus.rtl.de appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 70%.

What this site appears to be

Official RTL+ German streaming landing page describing content catalog (series, films, live TV, sports), subscription packages, pricing, privacy policy and cookie consent options. Offers paid tiers and HBO Max bundle.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2022.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

RTL+ is an apparently established German streaming service offering series, films, live television, sports, podcasts and audiobooks through subscription tiers, advertising-supported access and bundles that include HBO Max.

Scam/Impersonation Risk

No contradictions were observed: the available evidence contains no phishing, impersonation, malicious-reputation or confirmed blacklist indicators. The homepage presents a coherent streaming-service proposition, and the behavioral review found no hidden forms, password-exfiltration forms, wallet activity, clipboard manipulation or cloaking. Some browser and network observations were non-specific, including extensive external activity and page changes after interaction; in context, these are consistent with consent management, advertising and streaming-service functionality rather than a confirmed abuse pattern. The operator's real-world identity remains likely rather than independently verified, so the legitimacy conclusion is evidence-consistent rather than proof of ownership.

EVIDENCE

- External reputation checks recorded zero malicious and zero suspicious detections, with no phishing or blacklist result for the site.
- The homepage was classified as a streaming/media subscription page with no content red flags and no sensitive form.
- The site's transport and historical artifacts show a domain registered in 2022 (~3.98 years old).
- Web-archive records contain 5,000 snapshots from 2022-08-18T09:48:19Z through 2024-03-25T07:19:07Z, covering 3 years.

Regulatory Verification Notes

The site provides links to an impressum, privacy information, help and account access, and presents cookie-consent choices describing advertising, profiling, partner processing and possible processing outside the EEA. The supplied evidence does not confirm a regulatory license or registration number; for a consumer streaming subscription, this is principally a merchant-identity and disclosure matter rather than evidence of a scam. The available page structure and connected social presence are consistent with an established branded service, but the legal operator should not be treated as independently verified solely from the site presentation. A high page-authority signal and clean external reputation provide supportive context, not a regulatory determination.

EVIDENCE

- The homepage links internally to “Impressum,” “Datenschutz,” “Hilfe,” “Anmelden” and subscription-offer pages.
- The privacy and consent interface states that 169 partners may process identifiers and browser data for advertising, measurement, profiling and service improvement.
- The site is served on AS16509 by AMAZON-02 - Amazon.com, Inc., US; its TLS certificate is issued by Amazon RSA 2048 M01, uses DV validation, and is valid to 2026-10-13T23:59:59+00:00.

What to Verify Next

Before credential or payment interactions, an independent check should confirm the legal merchant named in the impressum, the applicable cancellation and refund terms, and the payment-protection options offered at checkout. The official support and contact channels should also be confirmed through an independently obtained route rather than relying solely on contact details encountered during browsing. Where a regulated service is expected for a particular transaction, the relevant registry should be checked separately.

EVIDENCE

- The homepage exposes subscription offers and account-access pathways alongside privacy and cookie-consent controls.
- The site provides a dedicated help section and an impressum link for independent review of service and merchant information.
- The analysis recorded no external destination for a sensitive form and no hidden password form.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture. No scam or impersonation contradiction was identified, although the real-world operator identity remains likely rather than independently verified.

Infrastructure Integrity

The website is protected by AWS CDN/WAF infrastructure, and the observed addresses were CDN edge servers rather than an exposed origin. This provides a meaningful exposure-mitigation benefit but is an infrastructure control, not independent proof of legitimacy.

EVIDENCE

- Hosting infrastructure resolved to AS16509, AMAZON-02 - Amazon.com, Inc., with the service identified in the United States.
- Four observed edge IPs were recorded: 213.186.33.5, 3.125.219.198, 63.182.107.48 and 63.186.154.109.
- The infrastructure assessment identified AWS CDN/WAF protection and 0 origin candidates.

Closing Assessment

Normal browsing is proportionate to the evidence; account or payment use should proceed after the ordinary independent merchant-identity, cancellation, and payment-protection checks described above.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	78%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of plus.rtl.de.

- The request stayed on plus.rtl.de. It was not redirected to another domain. CLEAR
- DNS for this domain is served by eurodns.com, across 4 name servers. NOTED
- The earliest public archive of this site is from 2022-08-18. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about plus.rtl.de at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
