

Is possap.gov.ng legit? TrustSniffer's high-trust assessment: 100/100

possap.gov.ng

Verdict

100

OUT OF 100

HIGH TRUST

possap.gov.ng appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-04 by automated analysis. Classification confidence 75%.

What this site appears to be

POSSAP is an online public-service portal for requesting, tracking, and paying for Nigerian police specialized services. The page explains its request-approval-fulfilment process and provides login and account-registration interfaces.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2022.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a Nigerian government public-service portal that enables individuals and organizations to request, track, validate, and pay for specialized police services, including extracts, permits, certificates, escorts, and protection services through an account-based workflow.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or confirmed malicious reputation signals were observed. The domain's established history, sustained archival presence, government namespace, and meaningful traffic footprint converge with the homepage's coherent public-service purpose. The login and registration forms are consistent with that purpose, and no sensitive form was found to submit data to an untrusted destination.

- Domain-registration records show that the domain was registered in 2021 and is approximately 5.56 years old.
- The web archive contains 551 snapshots spanning 2022–2026, representing 5 years of tracked history without detected repurposing or semantic drift.
- External reputation telemetry recorded 0 malicious and 0 suspicious detections, no safe-browsing malicious classification, no abuse reports, and a traffic rank of 145,869.
- The homepage contains two visible login and registration forms; neither hidden forms nor password submissions to external destinations were detected.

Regulatory Verification Notes

The portal presents itself as the Police Specialized Services Automation Project and operates within Nigeria's restricted government domain namespace. Its stated function is the administration of public-service requests and fees rather than regulated investment, brokerage, or deposit-taking activity; consequently, no financial-services licensing claim is expected from the described business model. The supplied homepage references policy material but does not provide enough detail to assess the complete legal notices or administrative terms, which is a minor disclosure limitation rather than a legitimacy concern.

- The domain uses the verified sovereign government suffix `gov.ng`, while the homepage identifies the service as a government/public-service portal.
- The homepage describes a structured request, approval, and fulfilment process and provides policy links for users of the service.
- The site is served from AS16509 (AMAZON-02 — Amazon.com, Inc., US).
- The site's transport encryption uses a DV TLS certificate issued by Amazon RSA 2048 M04, valid to 2027-03-11.

What to Verify Next

Before completing a payment, the generated invoice should be reconciled with the requested service, amount, and approved payment route. Issued permits, extracts, and certificates should be checked through the portal's document-validation function, while account access should be protected with a unique password and routine transaction-history review.

- The homepage states that payments may be made against an invoice through bank branches, mobile banking, POS terminals, or supported debit cards.
- The navigation includes a dedicated document-validation function for checking issued material.
- The account area provides consolidated request and payment-history records.
- The homepage offers a help route for questions or complaints concerning the request process.

Summary Verdict

The website is a legitimate, established, and trustworthy government service portal. Its institutional identity, operationally coherent content, historical continuity, clean external reputation, and secure account workflow support normal interaction, including login and standard service transactions.

Infrastructure Integrity

The site is protected by CDN/WAF infrastructure, with the observed address operating as an Amazon edge server rather than an exposed origin. This architecture mitigates direct origin exposure and provides a conventional protective layer, although infrastructure protection alone is not evidence of institutional legitimacy.

Closing Assessment

Prospective users may use the portal normally for account access, service requests, document validation, and standard payments, subject to ordinary account-security and transaction-confirmation practices.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	60%

- Identity verified on page

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of possap.gov.ng.

- The request stayed on possap.gov.ng. It was not redirected to another domain. CLEAR
- Registration is published under Nitda Hostmaster. CLEAR

- DNS for this domain is served by galaxybackbone.com, across 2 name servers. NOTED
- The registration is paid up to 2022-01-11. NOTED
- The earliest public archive of this site is from 2022-06-27. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about possap.gov.ng at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
