

Is postbank.de legit? TrustSniffer's high-trust assessment: 75/100

postbank.de

Verdict

75

OUT OF 100

HIGH TRUST

postbank.de appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Homepage/marketing and service hub for Postbank offering retail banking products (accounts, loans, savings), branch/ATM lookup, customer support, notices and promotions. Not a login-only page; contains links to online banking and service actions.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1996.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is Postbank's retail-banking and financial-services hub, presenting current accounts, cards, loans, savings and investment products, payment services, branch and ATM location tools, online banking access, customer support, security assistance, and promotional information. Its apparent business model is conventional banking, generating revenue through interest spreads, banking fees, product charges, and related financial-services activity.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there were no phishing, impersonation, malicious-content, or confirmed threat-list indicators. The site's long and continuous historical presence, substantial public traffic footprint, and coherent banking content support the assessment that it is an established, apparently legitimate website. The presence of a login path is consistent with the stated banking function, and no hidden forms, wallet-drainer behavior, or untrusted sensitive-form destinations were identified. The operator's real-world identity is nevertheless not independently verified, so the site's apparent legitimacy should not be treated as proof of the operator's identity.

EVIDENCE

- The domain is 29.63 years old, with registration continuity dating from 1996.
- Web archives contain 4,433 snapshots spanning 1996–2026, with 31 years tracked.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no phishing or blacklist indicators; the site held traffic rank 28613 and was in the top 1 million.
- The homepage identifies a corporate banking service, provides customer-service and branch/ATM functions, and records no content red flags.

Regulatory Verification Notes

The homepage and navigation expose banking, legal, privacy, support, and security-related service areas, and the content is consistent with a mature retail-bank operating model. The supplied site material does not present a license number or regulator attribution, leaving a regulatory-disclosure gap rather than establishing wrongdoing. A third-party broker dataset matched the domain to Postbank and reported "No Regulation" with no license found; this is a soft reputational signal and is not a legal or regulatory determination, particularly because the dataset is not itself evidence of the bank's authorization status. The available evidence supports an established-site assessment, but not independent verification of the real-world operator.

EVIDENCE

- The homepage offers accounts, credit, savings and investment services, payment products, online banking, customer support, and branch/ATM lookup.
- The site is served through AS8373, identified as DEUBA-NET – Deutsche Bank AG, DE.
- The transport certificate is EV, issued by DigiCert EV RSA CA G2 to DEUTSCHE BANK AG, valid through 2027-02-28T23:59:59+00:00.
- The third-party broker dataset matched the domain exactly to Postbank and recorded “No Regulation” and “no” license found.

What to Verify Next

Before credential or payment interactions, an institution should independently confirm that the domain is the official banking channel using a known bank statement, established customer-service number, official mobile application, or an independently sourced institutional reference. The relevant financial-services registry should be checked for the applicable Postbank legal entity and authorization status, and the bank’s terms, privacy documentation, complaint route, and payment-protection arrangements should be reviewed through independently confirmed channels. Login activity should be limited to the expected official authentication flow, with multifactor authentication and transaction alerts enabled where available.

EVIDENCE

- The homepage includes both login and customer-service pathways, making independent confirmation of the official access route a relevant control.
- The site navigation includes legal, privacy, security, and customer-support areas suitable for checking contractual and protection information.
- The available evidence leaves the operator-to-entity connection independently unverified, so external confirmation remains appropriate for sensitive banking actions.

Summary Verdict

Available evidence supports a **high-trust, low-risk posture** and is consistent with an established, apparently legitimate website. No scam or impersonation contradiction was identified, although the evidence does not independently prove the real-world operator identity.

Infrastructure Integrity

The site is protected by Akamai CDN/WAF infrastructure, with observed edge servers and potential origin candidates. This provides a meaningful layer of traffic filtering and exposure reduction, but protective infrastructure is a mitigating security control rather than proof of ownership or legitimacy.

EVIDENCE

- Akamai CDN/WAF protection was observed during infrastructure resolution.
- Three edge IPs were observed: 172.236.100.28, 172.239.193.10, and 172.239.194.119, all associated with AS63949.

Closing Assessment

Normal browsing and routine service evaluation are proportionate to the available risk posture; credential or payment activity should follow the independent official-channel, authorization, and consumer-protection checks described above.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of postbank.de.

- The request stayed on postbank.de. It was not redirected to another domain. CLEAR
- DNS for this domain is served by db-dns.de, across 9 name servers. NOTED
- The earliest public archive of this site is from 1996-12-24. CLEAR
- It is hosted on DEUBA-NET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about postbank.de at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
