

Is postgrespro.ru legit? TrustSniffer's high-trust assessment: 100/100

postgrespro.ru

Verdict

100

OUT OF 100

HIGH TRUST

postgrespro.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 55%.

What this site appears to be

Official Russian-language site for Postgres Professional presenting enterprise database products (Postgres Pro Enterprise, Standard, Certified), services (migration, support), case studies, events and contact information (email, phone, legal address).

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

This Russian-language corporate website presents Postgres Professional as an enterprise database software provider, offering Postgres Pro products, migration and support services, consulting, technical resources, case studies, events, and business contact channels for organizations operating demanding data systems.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there are no phishing, impersonation, confirmed blacklist, or malicious-content indicators. The homepage presents a coherent corporate B2B model rather than a high-pressure consumer or investment scheme, and the site's claims, product structure, case studies, and support offering are internally consistent with an established software vendor. The organization's real-world operator identity is not independently verified, so the legitimacy assessment remains evidence-consistent and apparent rather than proven.

EVIDENCE

- The homepage is classified as a corporate/product site and contains no detected red flags, login form, hidden form, wallet functionality, or sensitive-data collection.
- External reputation checks recorded zero malicious and zero suspicious detections, with no phishing or blacklist finding.
- The domain was registered on 2015-01-20 and is approximately 11.57 years old; the registrar is RU-CENTER-RU.

Regulatory Verification Notes

The site describes a conventional enterprise software business monetized through commercial database editions, subscriptions, paid support, migration, consulting, and partner services. It presents Postgres Pro Enterprise, Standard, and Certified offerings, including Postgres Pro Enterprise 18, and describes capabilities such as high-load operation, reliability, scalability, and enterprise support. The homepage also makes substantial self-reported claims, including being a leading Russian database developer, having more than 400 specialists, serving more than 2,500 public- and private-sector companies, and maintaining eight products; these claims support commercial maturity but are not independent proof of corporate identity or market position. No licensing authority or registration number is disclosed in the supplied page content, which is a regulatory and procurement transparency point to resolve according to the customer's jurisdiction and transaction type.

EVIDENCE

- The company, products, cases, and contact pages describe Postgres Pro Enterprise, Standard, and Certified products, migration, support, consulting, and enterprise use cases.
- The site's transport certificate is OV-validated, issued by GlobalSign RSA OV SSL CA 2018 for Postgres Professional, and valid through 2026-12-05.
- The site is served from AS47478, operated by MSTN-AS - MSTN CJSC, RU.

What to Verify Next

Before a credentialed or payment-related engagement, an enterprise procurement function should independently reconcile the legal entity presented on the company and contact pages with the applicable corporate registry. Any required software, services, or sector-specific authorization should be checked with the relevant regulator or licensing register, and commercial documentation should be reviewed for support scope, renewal, cancellation, refund, and payment-protection terms. Contact channels should be confirmed through an independently sourced route rather than relying solely on the website.

EVIDENCE

- The site provides company and contact sections intended to support corporate-identity and procurement review.
- The stated business model involves software licensing, subscriptions, support, and consulting, making contract and payment terms relevant to due diligence.
- The available evidence does not independently verify the operator's connection to the presented organization.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate corporate website and supports a high-trust, low-risk posture for ordinary business interaction. No scam or impersonation contradiction was identified, while the operator's real-world identity remains independently unverified.

Infrastructure Integrity

The site resolves directly to two likely origin addresses, with no CDN or WAF detected. This provides less edge-layer shielding than a mainstream CDN deployment, but the infrastructure observation is not, by itself, evidence of malicious activity and does not outweigh the site's broader positive assessment.

Closing Assessment

Normal business engagement may proceed on a proportionate basis, subject to independent checks of merchant identity, applicable authorization, commercial terms, and payment protections before credentials or payment are submitted.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	60%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of postgrespro.ru.

- The request stayed on postgrespro.ru. It was not redirected to another domain. [CLEAR](#)
- Registration is published under RU-CENTER-RU. [CLEAR](#)
- DNS for this domain is served by ru., across 4 name servers. [NOTED](#)
- The registration is paid up to 2027-01-20. [NOTED](#)
- It is hosted on MSTN-AS, from a server in RU. [NOTED](#)

About this assessment

A trust score summarises the evidence TrustSniffer could collect about postgrespro.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
