

Is postimages.org legit? TrustSniffer's high-trust assessment: 90/100

postimages.org

Verdict

90

OUT OF 100

HIGH TRUST

postimages.org appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Postimages: a multilingual, freemium image hosting service offering free and premium plans, upload tools, and API access. Visible pricing, terms, and account actions; no indicators of phishing or crypto/financial solicitations.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2010.
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.

Full analysis

Overview

Postimages is a multilingual freemium image-hosting and file-upload service that allows visitors to upload, resize, retain, and share images through permanent links, with optional premium subscriptions and API access. Its apparent business model combines ad-supported free hosting with paid plans providing higher upload limits, original-resolution hotlinks, an ad-free experience, and expanded API capacity.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or conflicting-identity signals were observed. The site's homepage presents a coherent image-hosting service with upload, account, and Terms of Use functions; the login form is consistent with that stated service rather than an unrelated credential-collection theme. One abuse report is associated with the observed hosting IP, but it concerns shared data-centre infrastructure, carries zero confidence, and is expressly discounted because it does not attribute the activity to this website. Available evidence is therefore consistent with an established, apparently legitimate site, while the real-world operator identity remains independently unverified.

EVIDENCE

- The homepage identifies the service as "Postimages — free image hosting / image upload" and presents upload, account, and image-link functions without phishing indicators.
- External reputation checks recorded zero malicious and zero suspicious detections for the evaluated domain, with no confirmed blacklist or phishing finding.
- Domain registration records show registration in 2010, approximately 15.63 years ago.
- Web-archive records show 5,000 snapshots from 2010 through 2024, covering 15 tracked years with continuous historical activity.

Regulatory Verification Notes

The service presents a conventional SaaS hosting model rather than a financial, investment, brokerage, or regulated-payment offering. The homepage visibly provides pricing, Free and Premium account options, API quotas, upload limits, and a Terms of Use link, which supports a comparatively clear commercial proposition. No regulated financial solicitation or license claim is identified in the supplied page evidence; the principal verification point is consequently the legal identity of the operator and the contractual terms applicable to paid

subscriptions, data handling, content removal, and refunds. The absence of an independently verified operator identity should be treated as a routine due-diligence consideration, not as evidence of deception.

EVIDENCE

- The homepage describes free ad-supported hosting and Premium subscriptions, including upload limits of 32 MB for free accounts and 96 MB for Premium accounts.
- The pricing presentation states that Premium includes original-resolution hotlinks, an ad-free experience, and API access of 10,000 units per month versus 1,000 units for free accounts.
- The site's transport encryption uses a valid Domain Validation certificate issued by YE2, with validity through 2026-09-19.
- The website is served through AS63023, identified as AS-GLOBALTELEHOST - GTHost, US.

What to Verify Next

Before credential or payment interactions, an enterprise or consumer should independently confirm the operator's legal name, billing entity, subscription cancellation process, refund provisions, and applicable privacy and content-removal terms. Payment should use a method offering appropriate dispute and buyer protection, and official support channels should be confirmed through an independent route rather than relying solely on contact details presented on the site. For organisational use, review whether uploaded content, API access, retention settings, and account controls meet internal data-governance requirements.

EVIDENCE

- The homepage links image uploads to the Terms of Use, making that document the appropriate source for confirming contractual obligations.
- The homepage provides both account actions and paid-plan descriptions, so subscription and account-recovery terms warrant review before commercial use.
- The service offers upload-duration choices ranging from one hour to one year and a "No expiration" option, making retention and removal controls relevant to organisational review.

Summary Verdict

Postimages presents a **high-trust, low-risk posture** supported by a long operating history, sustained public presence, coherent service content, clean evaluated reputation, and benign observed behaviour. The evidence is consistent with an established, apparently legitimate website, but it does not independently prove the real-world operator's identity.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a mitigating layer against direct exposure and common web-delivery abuse, while the observed infrastructure resolved to a CDN edge rather than a confirmed origin. The protective layer supports normal service delivery but is not, by itself, proof of legitimacy.

EVIDENCE

- Infrastructure analysis identified Cloudflare as the CDN/WAF provider and recorded one observed edge address, with no origin candidate identified.
- The observed edge infrastructure is associated with AS63023 and the US hosting environment described above.

Closing Assessment

Normal browsing and ordinary service evaluation are proportionate to the available evidence; credential or payment use should follow independent checks of the operator, subscription terms, and payment protections.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Signals weighed against the site

- AbuseIPDB: 1 report on hosting IP 185.221.219.49 (Global Managed Hosting Inc., Data Center/Web Hosting/Transit), 0% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of postimages.org.

- The request stayed on postimages.org. It was not redirected to another domain. CLEAR
- Registration is published under NAMECHEAP INC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-12-27. NOTED
- The earliest public archive of this site is from 2010-09-04. CLEAR
- It is hosted on AS-GLOBALTELEHOST, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about postimages.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
