

Is postman.com legit? TrustSniffer's high-trust assessment: 100/100

postman.com

Verdict

100

OUT OF 100

HIGH TRUST

postman.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Corporate marketing and product landing page for Postman, describing API platform features, enterprise offerings, downloads, docs, and AI enhancements. Standard informational site for a SaaS vendor.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1996.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

postman.com is the corporate product website for Postman, presenting an API development and management platform for individual developers, teams, and enterprise customers through product information, documentation, downloads, support resources, and subscription-oriented offerings.

Scam/Impersonation Risk

No contradictions were observed. The available evidence is consistent with an established, apparently legitimate corporate website: the homepage has a coherent Postman-branded SaaS presentation, no phishing or brand-impersonation indicators were identified, and external reputation checks found no malicious, suspicious, or blacklist detections. The real-world operator identity is not independently verified, so the strong site-level assessment should not be treated as proof of the legal entity behind the domain.

EVIDENCE

- The homepage is identified as a corporate product landing page for Postman and contains substantial, coherent API-platform content; no red flags were recorded.
- The domain was registered in 1995 and is approximately 31.44 years old, according to registration data.
- The web archive records 2,582 snapshots spanning 1996–2026, covering 31 tracked years.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no blacklist hit.

Regulatory Verification Notes

The site's business model is a SaaS API platform offering free individual access alongside paid team and enterprise services. The homepage describes API design, testing, monitoring, collaboration, documentation, integrations, and AI-related capabilities, including Postman API Network, MCP Server Catalog, AI Engineer, Agent Mode, and enterprise API governance solutions. The supplied content does not present a license claim or license number; for a software provider this is a disclosure and applicability matter rather than evidence of impersonation or fraud. The site content is detailed and commercially coherent, but the operator's legal identity remains independently unverified.

EVIDENCE

- The homepage identifies Postman as an API platform and presents product areas including API Client, Collection Runner, Monitors, Workspaces, Mock Servers, SDK Generator, and Postman CLI.
- The homepage presents pricing, enterprise, support, documentation, security, and customer-oriented resources consistent with a mature SaaS business model.
- No license authority or license number is presented in the supplied page content.
- The domain registrar is Amazon Registrar, Inc.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm the operating legal entity, review applicable subscription, cancellation, refund, and privacy terms, and confirm that the payment route provides appropriate protection. Where a regulated service or jurisdiction-specific obligation is relevant to the intended use, the applicable registry or corporate record should be checked independently. Official support and contact channels should also be confirmed through a separate trusted source.

EVIDENCE

- The homepage provides sign-up, pricing, enterprise, and support pathways, making merchant-identity and commercial-term checks relevant before enrollment or payment.
- The independent identity-verification status is unverified, so on-site branding alone should not be treated as conclusive proof of the operator.
- The transport and hosting artifacts support ordinary site access but do not independently establish the legal entity responsible for commercial services.

Summary Verdict

The overall posture is **high trust and low risk**, with strong convergence across the site's substantive corporate content, long-term domain continuity, clean external reputation, and stable technical operation. Available evidence is consistent with an established, apparently legitimate website, while the independently unverified operator identity remains a bounded qualification rather than a detected contradiction.

Infrastructure Integrity

The site is protected by Cloudflare CDN/WAF infrastructure, with observed traffic served through Cloudflare edge systems rather than a directly exposed origin candidate. This provides a meaningful defensive and availability benefit, but remains a mitigating infrastructure signal rather than proof of legitimacy.

EVIDENCE

- Served from AS13335 (Cloudflare, Inc.; CLOUDFLARENET), US.
- TLS certificate issued by WE1, validation level DV, valid to 2026-10-21T08:53:28+00:00.
- Six observed IP addresses were CDN edge addresses; likely origin IP count was 0.
- Cloudflare was identified as the trusted CDN/WAF provider.

Closing Assessment

Ordinary browsing and standard service evaluation are proportionate to the assessed posture; credential or payment use should follow the independent merchant-identity, terms, and payment-protection checks described above.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of postman.com.

- The request stayed on postman.com. It was not redirected to another domain. CLEAR
- Registration is published under Amazon Registrar, Inc.. CLEAR
- DNS for this domain is served by awsdns-59.org, across 4 name servers. NOTED
- The registration is paid up to 2027-03-14. NOTED
- The earliest public archive of this site is from 1996-12-19. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about postman.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
