

Is premiumevents.ge safe? TrustSniffer's moderate-trust assessment: 65/100

premiumevents.ge

Verdict

65

OUT OF 100

MODERATE TRUST

premiumevents.ge is moderately trusted.

Most signals looked ordinary, and some evidence was missing. Read the checks below before you pay or hand over personal details.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 70%.

What this site appears to be

A Facebook-style login and cookie/privacy information page. Contains login form fields and links to account-related services and privacy/cookie explanations. No financial solicitations detected.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

The page as captured

<https://www.facebook.com/login/>

What [premiumevents.ge](https://www.premiumevents.ge) served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2017.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website at [premiumevents.ge](https://www.premiumevents.ge) presents a Facebook-style account login experience, including email-or-mobile-number and password fields, account recovery and registration options, cookie and privacy explanations, and links associated with Facebook, Instagram, Threads, and other Meta products. Its apparent purpose is to provide access to a social-networking account service, although the relationship between the displayed service and the website's domain is not independently established.

Scam/Impersonation Risk

No confirmed blacklist, phishing, malware, or legal-identity contradiction was observed. The principal concern is the page-level identity mismatch: the login page is branded "Facebook," uses Facebook and Meta product references, and requests credentials, while the assessed domain is [premiumevents.ge](https://www.premiumevents.ge). This creates a material sensitive-interaction concern even though the available evidence does not establish a confirmed impersonation finding. Dynamic behavior included extensive external activity and post-interaction page changes, but the observed session showed no hidden forms, external password destinations, cloaking, wallet activity, clipboard manipulation, or other account-draining behavior; those signals are therefore treated as nonspecific characteristics of a dynamic login and cookie interface rather than proof of fraud.

EVIDENCE

- The login page displays the title “Facebook,” a password form, “Forgot password?” and “Create new account” functions, and links to Meta-associated services.
- The page links to the social domains facebook.com, instagram.com, and threads.net, while the assessed domain is premierevents.ge.
- Registration records show creation on 2016-01-14, an age of 10.61 years, expiry on 2027-01-15, and registrar domenebi.ge.
- The archive records contain 246 snapshots from 2017-05-25 through 2026-03-10, covering 10 tracked years.

Regulatory Verification Notes

The available content is oriented toward account access, privacy, cookies, and platform services rather than a regulated financial offering. No licence claim, registration number, or clearly identified operating legal entity is presented in the supplied page content, leaving a disclosure gap for independent verification rather than constituting evidence of a scam. Available reputation observations found no malicious listing, no reported abuse associated with the observed CDN usage, and no matching broker profile; coverage was partial, so these are supporting signals rather than a regulatory or legal determination. The long registration history, sustained archive presence, valid transport encryption, and stable identified hosting infrastructure are consistent with an established web presence, but they do not independently verify the operator of this particular domain.

EVIDENCE

- The page provides privacy, cookie, terms, help, and contact-navigation elements but does not state a licensing authority or registration number.
- The observed hosting network is AS16509, Amazon.com, Inc., United States.
- The TLS certificate was issued by YR1 at DV validation level and is valid through 2026-09-22 04:06:13 UTC.
- External reputation observations recorded zero malicious and zero suspicious detections where evaluated, with partial provider coverage.

What to Verify Next

Before any credential submission, the intended service should be reached through an independently sourced official Facebook route and the displayed domain should be compared against the official service’s documented login domains. The intended operator and support channels should also be confirmed through a separately published or offline source, and any material transaction or account-recovery action should be deferred until that relationship is established.

EVIDENCE

- Independent comparison step: validate the login destination against the official Facebook service reached without following links from the assessed page.
- Independent identity step: confirm the intended operator and support route using a separately sourced corporate or service reference.
- Transaction-control step: require an independently verified service relationship before authorizing high-value or irreversible activity.

Summary Verdict

The website carries a **moderate trust posture**: its technical continuity, established registration history, and page content are consistent with a functioning, mature web presence, while the real-world operator and the displayed brand relationship remain only likely rather than verified. No confirmed scam or impersonation contradiction was identified, but sensitive interaction risk remains material because the site presents a branded credential-collection experience.

Infrastructure Integrity

The site is protected by Vercel CDN/WAF infrastructure, with observed edge addresses on AS16509 operated by Amazon.com, Inc.; no origin candidate was identified in the observed resolution. This edge-based architecture is a mitigating security-control signal because it reduces direct exposure of the underlying service, but it does not by itself prove ownership or legitimacy.

Closing Assessment

Prospective users should independently confirm the intended service and operator before entering credentials or committing to high-value actions, using a separately sourced official channel rather than relying solely on the assessed page.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by page content, registration and ownership, analysis engine, behaviour in a sandbox.

01 Governance Risk

- The page presents a sign-in form, and the operator behind it could not be independently verified.

Page content rule:PAGE_TYPE_LOGIN_UNVERIFIED

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- Most of what the page loaded came from other domains rather than from this one.
Behaviour in a sandbox rule:BEHAV_EXTERNAL_RATIO_HIGH
- The page asks visitors for sensitive information.
Page content rule:PAGE_FORM_SENSITIVE
- A sign-in path on this site handles sensitive information.
Page content rule:PAGE_LOGIN_PATH_SENSITIVE
- The page presents itself as a brand TrustSniffer confirmed it does not belong to.
Page content rule:PAGE_BRAND_IMPERSONATION_CONFIRMED

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	76%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of premieevents.ge.

- The request for premieevents.ge ended on www.facebook.com, a different domain. WATCH
- Registration is published under domenebi.ge. CLEAR
- DNS for this domain is served by vercel-dns.com, across 2 name servers. NOTED
- The registration is paid up to 2027-01-15. NOTED
- The earliest public archive of this site is from 2017-05-25. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about premiuevents.ge at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
