

pub-1614932a526c40d79fe5bf23e71e3ff7.r2.dev: TrustSniffer assessment: 50/100

pub-1614932a526c40d79fe5bf23e71e3ff7.r2.dev

Verdict

50

OUT OF 100

MODERATE TRUST

pub-1614932a526c40d79fe5bf23e71e3ff7.r2.dev is moderately trusted.

Most signals looked ordinary, and some evidence was missing. Read the checks below before you pay or hand over personal details.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-09-22 by automated analysis. Classification confidence 55%.

What this site appears to be

A standard 404/Object not found page indicating the requested storage object is not public or does not exist. No forms, links, or commercial content present.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

<https://pub-1614932a526c40d79fe5bf23e71e3ff7.r2.dev/>

What pub-1614932a526c40d79fe5bf23e71e3ff7.r2.dev served when TrustSniffer captured it on 2026-09-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website presents only a storage-host error page stating “Not Found” and “Object not found,” with no visible commercial service, operator identity, or engagement mechanism; its apparent purpose cannot be established from the available page.

Scam/Impersonation Risk

No identity contradiction or brand impersonation was observed in the rendered content, and the page contains no login form, payment request, or credential solicitation. However, the domain is subject to confirmed blacklist status and multiple external malicious detections, creating a material risk for sensitive interaction despite the absence of overtly malicious page content. The security reports should be treated as a significant site-level warning; separate abuse reports associated with shared CDN infrastructure are not independently attributable to this website and therefore provide limited additional weight.

EVIDENCE

- The observed homepage returns a 404 “Object not found” response and contains no forms, links, commercial content, or brand-impersonation indicators.
- External reputation assessment recorded 5 malicious detections from 10 effective detections and a confirmed blacklist status.
- Two abuse reports concern a shared Cloudflare CDN address, with a zero confidence score and whitelisted shared-infrastructure attribution; this signal is discounted as an IP-level finding rather than a confirmed site-specific abuse finding.

Regulatory Verification Notes

The available page does not provide an operator name, legal entity, licensing statement, registration number, or business description. This is a substantive disclosure gap because the page is not an operating legal or commercial presentation, while the operator identity remains independently unverified. No broker-reputation match was identified in the supplied third-party context, but that absence does not establish licensing, authorization, or legitimacy. The absence of a visible business model also prevents meaningful assessment of which regulatory regime, if any, would apply.

EVIDENCE

- The rendered page contains only error text and no legal, about, terms, privacy, licensing, or contact disclosure.
- No license authority or license number is presented in the available site content.
- The supplied third-party broker comparison produced no match; this is contextual only and is not a regulatory determination.

What to Verify Next

Before any sensitive interaction, an independent source should establish the intended operator, the service being offered, and the applicable licensing or registration status. Any claimed corporate identity should be matched against the relevant official registry, and official contact channels should be confirmed through an independently obtained source rather than through the observed page. If the intended destination is supplied by another party, its domain and purpose should be validated separately before credentials, payment details, or financial assets are involved.

EVIDENCE

- The available page provides no operator, service, or regulatory information from which those checks can be completed.
- The page has no login, payment, or other sensitive-action interface, so the current capture does not demonstrate a legitimate interaction path.
- External malicious detections and blacklist status make independent validation necessary before expanding beyond non-sensitive inspection.

Summary Verdict

The site warrants a **moderate-trust classification with elevated risk for sensitive interaction**. Its legitimacy and real-world operator remain unverified, while the confirmed external threat signals prevent a positive trust conclusion. The evidence supports a clearly cautionary posture rather than an endorsement of account, credential, payment, or financial use.

Infrastructure Integrity

The site is protected by Cloudflare CDN/WAF infrastructure, and all four observed addresses are CDN edge addresses rather than identifiable origin servers. This reduces direct exposure of the origin and can mitigate some infrastructure risks, but it is only a protective hosting characteristic and does not validate the site operator or content.

EVIDENCE

- Served on AS13335, CLOUDFLARENET — Cloudflare, Inc., US; four observed addresses were identified as CDN edge infrastructure.
- TLS certificate issued by YE1 with DV validation, valid to 2026-12-06.
- The observed transport endpoint was 104.18.54.45 in the United States; no origin candidate was identified.

Closing Assessment

Sensitive use should be deferred until the intended operator, service purpose, and applicable authorization can be independently established; any subsequent engagement should begin with non-sensitive inspection and use independently confirmed channels.

Written analysis generated 2026-09-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, behaviour in a sandbox.

01 Governance Risk

- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- The structure of the page changed sharply while it was loading.
Behaviour in a sandbox rule:BEHAV_DOM_DENSITY_SPIKE

Signals weighed against the site

- AbuseIPDB: 2 reports on hosting IP 2606:4700:311b::6812:362d (Cloudflare, Inc., Content Delivery Network), 0% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of pub-1614932a526c40d79fe5bf23e71e3ff7.r2.dev.

- The request stayed on pub-1614932a526c40d79fe5bf23e71e3ff7.r2.dev. It was not redirected to another domain. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about pub-1614932a526c40d79fe5bf23e71e3ff7.r2.dev at assessment time. It is a starting point for your own judgement,

not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
