

Is quickweightlossfit.com a scam? TrustSniffer's high-risk assessment: 5/100

quickweightlossfit.com

Verdict

5

OUT OF 100

CRITICAL RISK

quickweightlossfit.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 55%.

What this site appears to be

A WordPress-powered lifestyle blog homepage with navigation (About, Contact), trending article headlines, and a sign-in/password-recovery form. Appears to use a Newspaper/TagDiv theme; no payment or investment functionality visible in provided content.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

https://quickweightlossfit.com/

What quickweightlossfit.com served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2017.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

The website quickweightlossfit.com presents a WordPress-based lifestyle and personal-content blog covering beauty, food, travel, fitness, culture, and sport news. Its homepage uses generic “My blog | Just another WordPress site” branding, displays trending articles and social-follower counters, and includes account sign-in and password-recovery functionality; the apparent business model is advertising-supported publishing rather than direct financial commerce.

Scam/Impersonation Risk

Confirmed external reputation contradictions are present. The domain is reported as blacklisted by two external sources, including seven malicious detections and one suspicious detection in the evaluated reputation results. This is materially inconsistent with the benign appearance of the captured WordPress homepage and warrants a security-forward posture for sensitive interactions. The page itself showed no detected brand impersonation, phishing-specific content, or overt malicious behavior, but its login and password-recovery forms create a credential-submission surface that should not be treated as safe merely because the visible content is ordinary.

EVIDENCE

- The homepage contains a “Sign in” form with username and password fields and a separate password-recovery function.
- External reputation results recorded `vt\_malicious: 7`, `vt\_suspicious: 1`, and `external\_blacklist: true`; Google Safe Browsing was recorded as not malicious.
- Domain registration evidence records creation on 2017-02-19, with an age of approximately 9.5 years.

Regulatory Verification Notes

The available homepage identifies a general blog presentation and provides About and Contact navigation, but the supplied content does not establish a legal operating entity, regulated business activity, or licensing basis. Because no payment, investment, brokerage, or other regulated product functionality was visible, licensing is not independently implicated by the observed business model; nevertheless, the operator’s real-world identity remains unverified. The absence of a broker-dataset match is contextual only and is not a licensing or regulatory determination.

EVIDENCE

- The homepage is titled “My blog | Just another WordPress site” and presents beauty, lifestyle, food, travel, fitness, culture, and sport-news categories.
- The supplied homepage content includes About and Contact navigation but no stated corporate identity or license information.
- The site’s hosting resolved to AS13335, CLOUDFLARENET - Cloudflare, Inc., US.
- The transport certificate is DV-validated, issued by WE1, and valid through 2026-09-25.

What to Verify Next

Before any sensitive interaction, an organization should independently establish the responsible operator through a verifiable corporate or publisher record and confirm that official support channels correspond to that operator. Security teams should also obtain a current reputation assessment from their own defensive controls and block or isolate credential use until the external detections have been resolved and the site’s account functionality has been validated. Any business engagement should remain limited to documented, independently confirmed purposes.

EVIDENCE

- The homepage exposes a credential login and password-recovery workflow despite presenting itself as a general blog.
- The supplied analysis recorded successful page retrieval and no external XHR or wallet activity during two observed runs.
- The page contains no visible payment or investment functionality in the captured content.

Summary Verdict

The website has a **critical trust posture** because confirmed external threat detections and blacklist records outweigh its otherwise ordinary blog presentation and stable technical delivery. Its legitimacy and operator

identity are not independently established, so sensitive interaction should be treated as unsuitable pending resolution of the reputation contradictions.

Infrastructure Integrity

The site is delivered through Cloudflare's CDN/WAF infrastructure, with observed addresses limited to Cloudflare edge servers and no origin candidate visible in the analysis. This provides a meaningful exposure-mitigation layer, but it is only an infrastructure control and does not offset the domain-level reputation findings.

EVIDENCE

- The site is protected by Cloudflare CDN/WAF infrastructure.
- Four observed IP addresses were identified as CDN edge addresses; zero likely origin IPs were identified.
- The observed IPv4 edge address included 104.21.21.228.

Closing Assessment

The proportionate course is to restrict use to non-sensitive observation while treating account access, credential submission, and any consequential engagement as inappropriate until independent security and operator-validation checks are completed.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.

Registration and ownership rule:KF_WHOIS_PRIVATE
- The registration record withholds contact details for the operator.

Registration and ownership rule:KF_WHOIS_HIDDEN

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.

External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100

Identity verification confidence	25%
----------------------------------	-----

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of quickweightlossfit.com.

- The request stayed on quickweightlossfit.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-02-19. NOTED
- The earliest public archive of this site is from 2017-05-08. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about quickweightlossfit.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
