

Is radar.tur.br legit? TrustSniffer's high-trust assessment: 75/100

radar.tur.br

Verdict

75

OUT OF 100

HIGH TRUST

radar.tur.br appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 70%.

What this site appears to be

The page displays PHP/WordPress error and include warnings (failed to open plugin file, headers already sent). No forms, links, social or monetization signals detected. Likely a misconfigured or partially broken WordPress site exposing debug output.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2007.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a small WordPress-hosted informational site that currently presents PHP and WordPress configuration warnings rather than substantive visitor content. Its apparent purpose is personal, blogging, or local-business publishing, with no visible monetization, account, or transactional workflow.

Scam/Impersonation Risk

No scam, phishing, blacklist, or impersonation contradictions were observed. The site's long registration history, sustained archival presence, clean available reputation checks, and absence of suspicious browser behavior support an established-site interpretation. The exposed WordPress debugging output is a material security-hygiene and availability weakness, but it is not, by itself, evidence of deceptive intent. A weak page-level resemblance signal referencing t.me was not corroborated by the observed content or behavior, and no login form, hidden form, external submission, wallet activity, or suspicious script was detected.

EVIDENCE

- The domain registration record shows creation on 2015-10-06, with an age of 10.88 years.
- Web archives contain 590 snapshots spanning 2007-10-23 through 2026-04-12, covering 20 tracked years.
- The homepage exposes WordPress plugin-inclusion and PHP header warnings, while behavioral inspection recorded 0 external XHR/fetch requests, 0 suspicious inline scripts, and 0 wallet-provider or wallet-drainer runs.
- Available external reputation checks recorded 0 malicious and 0 suspicious detections, with no blacklist hit identified.

Regulatory Verification Notes

Available evidence is consistent with an established, apparently legitimate website, but the real-world operator identity is not independently verified. The site does not visibly claim a financial, investment, or other regulated service, and no licensing or registration number is presented in the available page evidence; this is a disclosure gap rather than evidence of a scam. The registration record associates the domain with “A M INALBIS,” but that association alone does not establish the operator’s legal identity. A third-party broker-reputation check returned no match and should be treated only as contextual reputation information, not as a licensing or regulatory determination.

EVIDENCE

- The site is hosted on AS53243 — Brasil Site Informatica LTDA, BR.
- The transport certificate is issued by YR1, uses Domain Validation (DV), and is valid to 2026-10-30.
- The available homepage capture contains no licensing statement, registration number, or regulated-service disclosure.
- The available third-party broker-reputation comparison returned no match.

What to Verify Next

Before credential or payment interactions, independently confirm the operating entity associated with the site and check any applicable corporate or professional registry. If the site later introduces paid services, confirm the relevant licensing position, review the published terms and return or cancellation arrangements, and use payment methods with established dispute protection. Official contact channels should also be confirmed through an independent route rather than relying solely on information presented on the page.

EVIDENCE

- The domain record identifies “A M INALBIS,” while independent operator identity verification remains outstanding.
- The current page is an error/debug presentation, so it does not provide a reliable basis for assessing future commercial, contractual, or regulated-service claims.
- The available page evidence contains no terms, licensing materials, or payment-protection information.

Summary Verdict

The overall posture is **high trust and low risk**, with evidence consistent with an established website and no observed scam or impersonation contradiction. The principal qualification is that apparent legitimacy should not be treated as independently proven operator identity.

Infrastructure Integrity

The site resolves through AS53243 — Brasil Site Informatica LTDA, BR, without a detected CDN or WAF layer and without a separate edge-origin architecture identified. This is a straightforward hosting posture that offers limited additional exposure reduction, but it is not itself a legitimacy contradiction.

Closing Assessment

Ordinary browsing is proportionate to the assessed posture; credential or payment use should follow the independent entity, contractual, and payment-protection checks described above.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of radar.tur.br.

- The request stayed on radar.tur.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by com.br, across 2 name servers. NOTED
- The registration is paid up to 2027-10-06. CLEAR
- The earliest public archive of this site is from 2007-10-23. CLEAR
- It is hosted on AS53243, from a server in BR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about radar.tur.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
