

# Is radium-client.org safe? TrustSniffer's low-trust assessment: 25/100

radium-client.org

## Verdict

25

OUT OF 100

LOW TRUST

radium-client.org is low-trust and potentially risky.

Several risk patterns were present. Do not send money or personal details until you have verified this business another way.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-09-18 by automated analysis. Classification confidence 55%.

What this site appears to be

Cloudflare-served malware warning interstitial telling visitors the site was reported for distributing malware and offering an option to ignore and proceed; contains Ray ID and IP info.

## Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

## The page as captured

https://radium-client.org/

 **Warning**

# Suspected Malware

What radium-client.org served when TrustSniffer captured it on 2026-09-18. The page may look different now.

### Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

### Full analysis

#### Security Alert

Fortinet flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

The website currently presents a Cloudflare security interstitial rather than a functioning commercial or service interface. Visitors are shown a “Suspected Malware” warning stating that the site was reported for potentially distributing malware, with an option to ignore the warning and proceed; the observed page does not identify a business purpose, operator, or legitimate service offering.

#### Scam/Impersonation Risk

**Confirmed contradiction signals are present.** The landing page itself warns that the website was reported for potentially distributing malware and offers an “Ignore & Proceed” path, creating a material risk for visitors who bypass the control. External security intelligence also records a confirmed blacklist hit and additional malicious or suspicious detections. The real-world operator remains unverified, and the available evidence does not establish a legitimate connection between the domain and an identifiable organization. No separate brand-impersonation or conflicting legal-entity finding was established, but the malware warning and blacklist signal are sufficient to support a clearly cautionary posture.

#### EVIDENCE

- The homepage is a Cloudflare “Suspected Malware” interstitial stating that the website was reported for potentially distributing malware and providing an “Ignore & Proceed” option.
- External security assessment recorded a confirmed blacklist hit, with one malicious and three suspicious detections among the evaluated results.
- The domain was registered in 2026 and is approximately 0.4 years old; the registrar is Web Commerce Communications Limited dba WebNic.cc.

#### Regulatory Verification Notes

The only observed page is a security warning rather than an identity, legal, or service page. It provides no identifiable operating entity, licensing information, registration number, terms, or regulated-service disclosure from which authorization could be assessed. This is a substantial transparency gap, particularly because the site does not currently present a verifiable business model. The absence of a matching third-party broker record is only contextual and does not establish authorization or legitimacy.

#### EVIDENCE

- The observed homepage is an access-warning page with no company name, legal identity, license, registration number, or service terms.
- The page title is “Suspected Malware | Cloudflare,” and the visible content is limited to the malware warning, cookie requirement, and Cloudflare diagnostic information.
- The site’s transport encryption uses a DV certificate issued by WE1, valid until 2026-11-22; this confirms encrypted transport but does not verify the operator’s identity or regulatory status.

#### What to Verify Next

Any prospective engagement should first confirm the operator through an independently obtained corporate identity and confirm any claimed authorization directly with the relevant regulator or registry. The official contact and support channels should be confirmed through an independent, offline route rather than relying solely on the website. No content, software, or instructions should be accessed by bypassing the malware warning.

#### EVIDENCE

- The homepage does not provide the corporate or licensing information needed for an independent authorization check.
- The homepage explicitly presents an option to bypass the malware warning, making independent confirmation of the site’s legitimacy a prerequisite to further interaction.
- The site’s observed content does not expose a functioning service interface or documented business process that could otherwise be validated.

#### Summary Verdict

The website has a **low-trust posture with elevated risk for sensitive interaction**. Available evidence is inconsistent with treating the site as an established or independently verified online service, and the identified security contradiction materially outweighs the limited evidence of technically valid web hosting and encryption.

Infrastructure Integrity

The website is served through Cloudflare’s CDN/WAF infrastructure on AS13335, with observed addresses belonging to Cloudflare edge servers and no origin candidate exposed in the analysis. This infrastructure can reduce direct origin exposure, but it is only a protective delivery layer and does not establish that the underlying website or operator is legitimate.

EVIDENCE

- Served on AS13335, operated by CLOUDFLARENET - Cloudflare, Inc., US.
- Four observed addresses were CDN edge addresses, including 172.67.167.152; no likely origin IP was identified.
- TLS validation is DV, issued by WE1, with validity ending 2026-11-22.

Closing Assessment

The appropriate posture is to avoid login, credential submission, downloads, financial activity, and any attempt to bypass the security warning; any necessary investigation should remain limited to independently validated, non-interactive information gathering.

Written analysis generated 2026-09-18 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine.

01 Governance Risk

- The public registration record for this domain is incomplete.

Registration and ownership rule:KF\_WHOIS\_INCOMPLETE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.

Analysis engine signal:direct\_threat

Identity verification

|                                  |            |
|----------------------------------|------------|
| Status                           | UNVERIFIED |
| Identity score                   | 30/100     |
| Identity verification confidence | 50%        |

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of radium-client.org.

- The request stayed on radium-client.org. It was not redirected to another domain. CLEAR
- Registration is published under Web Commerce Communications Limited dba WebNic.cc. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-04-26. NOTED
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about radium-client.org at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
