

Is rapid7.com legit? TrustSniffer's high-trust assessment: 100/100

rapid7.com

Verdict

100

OUT OF 100

HIGH TRUST

rapid7.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-17 by automated analysis. Classification confidence 55%.

What this site appears to be

Corporate homepage / marketing pages for a well-known cybersecurity company describing products, managed services, research, resources, customer stories, and contact/demo options. Standard cookie consent present; no sensitive-data collection forms visible on the sampled page.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Rapid7.com is a corporate cybersecurity marketing website presenting enterprise products and services for managed detection and response, exposure and vulnerability management, SIEM, application security, threat intelligence, incident response, research, and related customer resources. Its apparent business model is the sale of software subscriptions, managed services, professional services, and support contracts to organizational customers.

Scam/Impersonation Risk

No scam, phishing, impersonation, or identity contradictions were observed. The homepage presents a coherent enterprise cybersecurity offering, including Managed Detection and Response, Attack Surface Management, Vulnerability Management, Next-Gen SIEM, Cloud-Native Application Protection, Threat Intelligence, and Incident Response Services; the content is consistent with a corporate software-and-services business rather than a deceptive investment or credential-harvesting scheme. Technical observation identified four suspicious inline scripts and two non-whitelisted external posts, but these signals did not produce a phishing pattern: no login form, hidden form, password-external form, wallet activity, clipboard manipulation, cloaking, or malicious external reputation finding was detected. The available evidence therefore supports a low scam/impersonation concern while preserving the distinction between site legitimacy and independently proven operator identity.

EVIDENCE

- Homepage: Corporate title, detailed product taxonomy, customer-story and research content, and enterprise service descriptions are present; no red-flag content was identified.
- Homepage behavior: No login form, hidden sensitive form, wallet activity, clipboard hijack, or cloaking was detected; the only visible form function was cookie consent.
- External reputation telemetry: Malicious and suspicious detections were both 0, and no blacklist or phishing finding was recorded.
- Homepage traffic telemetry: The site is ranked 986 globally and is within the top 1,000,000 sites.

Regulatory Verification Notes

The sampled corporate pages provide substantial descriptions of Rapid7-branded products, managed services, research, customer stories, and contact or demonstration routes. No financial, investment, or other regulated-service proposition was identified, and no license number or regulatory registration disclosure was present in the supplied page evidence; this is a transparency item for ordinary corporate due diligence, not evidence of a scam. The available evidence is consistent with an established website, while the real-world operator identity remains likely rather than independently verified. A separate broker-reputation dataset returned no match, which is contextual reputational information and not a licensing determination.

EVIDENCE

- Domain registration telemetry: Registered 2000-05-25T19:00:54Z, approximately 26.24 years old, with MarkMonitor Inc. as registrar and an expiration date of 2027-05-25T19:00:54Z.
- Hosting telemetry: Served through AS16509, Amazon.com, Inc. (AMAZON-02), US.
- Transport-security telemetry: TLS uses a DV certificate issued by Amazon RSA 2048 M04, valid through 2026-10-29T23:59:59+00:00.
- Corporate homepage and service pages: The supplied content identifies a mature enterprise cybersecurity business model but does not show a license or regulatory registration number.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm the legal entity behind the engagement, review the applicable service and return or cancellation terms, and confirm that any proposed commercial arrangement is covered by suitable payment protections. Licensing confirmation is relevant only if a particular offering or transaction falls within a regulated activity. Contact, demonstration, and support requests should be initiated through the site's established navigation and cross-checked against an independent corporate source.

EVIDENCE

- Homepage navigation: Direct paths are provided for contact, request-demo, careers, products, and support.
- Commercial-flow review: The sampled page exposes a free-trial and expert-contact pathway but no sensitive-data collection form beyond cookie consent.
- Independent-check scope: The supplied evidence identifies enterprise software and managed services, making legal-entity, contract-term, and payment-protection review the appropriate next-step controls.

Summary Verdict

Available evidence supports a **high-trust, low-risk posture** consistent with an established, apparently legitimate website. No contradictory risk signals were found, although the assessment does not independently prove the real-world operator identity.

Infrastructure Integrity

The site is protected by Amazon CloudFront CDN/WAF infrastructure, with observed Amazon edge addresses and a potential origin candidate. This architecture provides a meaningful mitigating control against direct exposure and common delivery-layer abuse, but protective hosting infrastructure is not, by itself, proof of organizational legitimacy.

Closing Assessment

Normal business research and ordinary site interaction are proportionate to the assessed posture; credential or payment activity should follow routine independent checks of merchant identity, applicable terms, and payment protection.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	80/100
Identity verification confidence	80%

- Trusted social count=4

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of rapid7.com.

- The request stayed on rapid7.com. It was not redirected to another domain. [CLEAR](#)
- Registration is published under MarkMonitor Inc.. [CLEAR](#)

- DNS for this domain is served by awsdns-45.org, across 4 name servers. NOTED
- The registration is paid up to 2027-05-25. NOTED
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about rapid7.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
