

Is re-store.ru legit? TrustSniffer's high-trust assessment: 90/100

re-store.ru

Verdict

90

OUT OF 100

HIGH TRUST

re-store.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-17 by automated analysis. Classification confidence 55%.

What this site appears to be

restore: appears to be a Russian retail chain and online store specializing in Apple products and other consumer electronics. The page contains product listings, prices, store information, customer service contacts, and newsletter signup. No investment, credential-harvesting, or crypto-related activity detected.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What re-store.ru served when TrustSniffer captured it on 2026-08-17. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

re-store.ru presents itself as a Russian online and brick-and-mortar retailer of Apple products, accessories, and other consumer electronics, with product sales, delivery, service, financing or instalment options, store locations, and customer support forming the apparent business model.

Scam/Impersonation Risk

No contradictions were observed: there was no phishing, impersonation, confirmed blacklist, malicious-reputation, or identity-inconsistency signal. The homepage describes ordinary retail activity, including Apple iPhones, MacBooks, AirPods, Samsung devices, Dyson products, and other electronics sold at stated prices, rather than investment, cryptocurrency, credential-harvesting, or unrealistic-return schemes. Automated interaction testing did identify suspicious inline scripts, substantial page mutation, and externally posted or requested traffic; however, the same testing found no hidden forms, external password forms, wallet activity, clipboard hijacking, or cloaking. These are technical implementation anomalies, not evidence of a scam or impersonation operation in the available evidence.

EVIDENCE

- The homepage is classified as retail/e-commerce and contains product listings, prices, cart controls, store information, service information, and customer-contact functions.
- The homepage contains no detected login form, hidden form, password submission to an external destination, wallet connection, or cryptocurrency feature.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no blacklist hit for the domain.
- Domain registration telemetry: registered 2006-02-06 through RU-CENTER-RU; age 20.54 years; expiry 2027-02-06.

Regulatory Verification Notes

The available evidence is consistent with an established consumer-electronics retailer, but the real-world operator identity is not independently verified. The site presents an “Apple Premium Reseller” and “official representative” positioning, together with store, delivery, payment, warranty, and service information; those on-site claims should be treated as business representations rather than independent proof of authorization or corporate identity. No regulated financial-service activity is indicated, and no licensing or registration number is identified in the supplied site content. That is a transparency and verification point for any financing or instalment arrangement, not evidence of scam activity. A mid-level page-authority signal and the absence of an adverse broker-reputation match provide contextual support without constituting legal or regulatory confirmation.

EVIDENCE

- Hosting telemetry: served from AS57724, DDOS-GUARD - DDOS-GUARD LTD, RU.
- Transport telemetry: GlobalSign GCC R3 EV TLS CA 2025, EV validation, subject organisation reStore LLC, valid to 2026-10-31T07:06:01+00:00.
- The homepage identifies the business as a network of Apple-focused stores and provides navigation for stores, delivery and payment, service centres, business purchasing, and customer support.

What to Verify Next

Before credential or payment interactions, an interested party should independently confirm the merchant’s legal identity, the applicable return and warranty terms, and the payment-protection arrangements associated with checkout or instalment purchases. Any claimed Apple reseller status or financing-related representation should be confirmed through an independent corporate or manufacturer channel rather than relying solely on the website. Contact channels should also be confirmed through an independent route, and high-value orders should use payment methods offering dispute or chargeback protection.

EVIDENCE

- The homepage provides store locations, customer-service contacts, delivery and payment navigation, and a checkout/cart function for review before purchase.
- The site includes warranty and service-centre content, creating identifiable pages against which return, warranty, and after-sales commitments can be checked.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate, low-risk retail website. Its content, technical posture, external reputation, and long operating history converge on a high-trust assessment, while the operator’s real-world identity remains independently unverified.

Infrastructure Integrity

The site resolves directly to two likely origin addresses and has no detected mainstream CDN or WAF edge layer. Its hosting is provided through DDOS-GUARD in Russia, and the deployment presents a valid EV certificate from GlobalSign; this hosting and encryption posture provide useful operational protection but are mitigating infrastructure signals, not proof of legitimacy.

Closing Assessment

Normal browsing is proportionate to the assessed posture, while independent merchant-identity, policy, and payment-protection checks should be completed before credentials or funds are committed.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of re-store.ru.

- The request stayed on re-store.ru. It was not redirected to another domain. CLEAR
- Registration is published under RU-CENTER-RU. CLEAR
- DNS for this domain is served by ru., across 4 name servers. NOTED
- The registration is paid up to 2027-02-06. NOTED
- It is hosted on DDOS-GUARD, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about re-store.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
