

Is recombee.com legit? TrustSniffer's high-trust assessment: 98/100

recombee.com

Verdict

98

OUT OF 100

HIGH TRUST

recombee.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 55%.

What this site appears to be

Recombee markets an AI-powered recommendation, personalized-search, and analytics platform for websites and applications. The page describes supported industries, product capabilities, scalability, integration methods, developer resources, a free trial, customer evidence, contact channels, partnerships, and company policies.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Recombee is an established B2B software-as-a-service website offering AI-driven recommendations, personalized search, and behavioral analytics for websites and applications, delivered through APIs, SDKs, widgets, and an administration interface with subscription-oriented trial and sales pathways.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or deceptive financial mechanics were observed. The homepage consistently presents a technically coherent software business, with developer documentation, product explanations, customer-oriented resources, and professional social channels reinforcing the same identity. The long-established domain, substantial global traffic footprint, and clean external reputation provide convergent evidence that this is the legitimate Recombee website rather than an imitation or opportunistic storefront.

- The domain registration record shows registration through GoDaddy.com, LLC on 4 November 2015: Registered 2015 (~10.75 years old), with expiry on 4 November 2026.
- The homepage contains no hidden or sensitive forms, suspicious inline scripts, cloaking, wallet-provider activity, clipboard hijacking, or detected brand impersonation.
- External reputation checks recorded 0 malicious and 0 suspicious classifications, no malicious safe-browsing finding, no external blacklist finding, and no abuse reports for the observed hosting address.
- The domain holds a global traffic rank of 11,611, indicating a strong, established usage footprint.

Regulatory Verification Notes

Recombee presents a commercial SaaS platform rather than a financial, brokerage, investment, or cryptocurrency service; the available content therefore does not indicate an activity that inherently requires financial-services authorization. The website provides links to company policies and identifies business contact, support, invoicing, partnership, and employment functions, although the supplied page evidence does not establish the precise contracting legal entity or reproduce its corporate registration particulars. That limited disclosure boundary is a minor due-diligence consideration for enterprise procurement, not evidence of misrepresentation. No relevant broker-profile match was found, but that third-party result has no bearing on the company's legal status.

- The homepage describes recommendation, personalized-search, and analytics capabilities for video, e-commerce, media, music, sports, real estate, travel, employment, and marketplace operators.
- The homepage provides policy links and dedicated paths for company information, research, jobs, partnerships, contact, support, and invoicing.

- The site is served from AS16276 (OVH - OVH SAS, FR), with the observed server located in the United States.
- The site's transport encryption uses a DV certificate issued by Go Daddy Secure Certificate Authority - G2, valid to 1 February 2027.

What to Verify Next

Enterprise customers should confirm the legal name and jurisdiction of the contracting party in the order form or master services agreement. Procurement review should also establish applicable data-processing terms, security commitments, service levels, subprocessors, retention arrangements, and the commercial basis for transition from the advertised free trial. Integration teams should validate API credentials and SDK packages against the official developer materials, while business contacts should be confirmed through independently sourced corporate channels when initiating a material engagement.

- The developer area advertises API references, ReQL, SDK libraries, platform integrations, and implementation documentation, providing concrete materials against which integration artifacts can be checked.
- The homepage advertises a free 30-day trial and sales-assisted demonstration pathway, making contractual conversion terms relevant to procurement review.
- The administration interface is described as providing real-time analytics, behavioral insights, and configuration controls, indicating that customer-data handling should be covered by technical and contractual diligence.
- The site links to LinkedIn, YouTube, and GitHub presences that can support independent confirmation of corporate and developer communications.

Summary Verdict

The website is legitimate, established, and trustworthy. Its consistent commercial identity, mature product presentation, long operating footprint, clean reputation, and benign observed behavior provide strong, mutually reinforcing support for a high-trust posture, with no contradictory risk signals identified.

Infrastructure Integrity

The website uses Cloudflare CDN/WAF protection, and the single observed address was an edge endpoint rather than a confirmed origin server. This arrangement reduces direct exposure of the underlying service and is a positive defensive control, while remaining a security mitigation rather than independent proof of legitimacy.

Closing Assessment

Normal interaction with the website, including account login, trial initiation, and standard use, is appropriate; institutional adoption should proceed through ordinary vendor, contractual, privacy, and integration-security review.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	38%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of recombee.com.

- The request stayed on recombee.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2026-11-04. NOTED
- It is hosted on OVH, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about recombee.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
