The page as captured

<https://reservphotoinstay.one/>

What reservphotoinstay.one served when TrustSniffer captured it on 2026-09-22. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Security Alert

Fortinet, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

This website appears intended to operate as a travel-and-hospitality booking or marketplace service for in-stay photography, potentially arranging reservations between visitors and photography providers. The available homepage capture contains no usable site text or service detail, so that business purpose remains an inference rather than a confirmed presentation by the operator.

Scam/Impersonation Risk

The site presents a **critical interaction risk** because independent threat-intelligence checks identified a confirmed blacklist condition, including 21 malicious detections and two suspicious detections. This is a direct reputation contradiction that outweighs the otherwise neutral inferred business model and the absence of observed login, payment, wallet, or hidden-form behavior. The homepage also returned a 404 response with no rendered content, preventing meaningful validation of the service, operator, or customer journey. No conflicting legal-entity names or specific brand-impersonation finding were identified, but the available evidence does not support treating the domain as a safe counterparty.

EVIDENCE

- Domain registration records show creation on 2026-06-24, with an age of approximately 0.25 years.
- External reputation checks recorded 21 malicious and 2 suspicious detections for the domain, with blacklist status confirmed by multiple sources.
- The homepage capture returned HTTP 404 and contained no DOM text, title, links, forms, or substantive service description.

Regulatory Verification Notes

The operator's real-world identity remains unverified. No licensing claim, registration number, or identifiable legal-entity disclosure was found in the available site material; because the homepage did not provide usable content, this is a material verification gap rather than evidence of a particular regulatory breach. The site's transport security is technically valid, but a domain-validated certificate and mainstream hosting arrangement establish encrypted transport only and do not validate the operator, service, or regulatory status.

EVIDENCE

- The available homepage material contains no identified legal entity, licence claim, licence number, or regulatory disclosure.
- The site uses a DV TLS certificate issued by WE1, valid through 2026-11-20.
- Registration records identify Gname.com Pte. Ltd. as the registrar.

What to Verify Next

Sensitive interaction should not proceed unless the operator is independently confirmed through a relevant corporate or regulatory registry and the service is reachable through a verified official channel. Credentials, payment details, and other financial information should not be submitted; any business engagement should remain suspended until the domain's blacklist status and the operator's authority to provide the advertised service are resolved. Any purported support or booking channel should be confirmed through independently sourced contact information rather than relying solely on the site.

EVIDENCE

- Independent registry confirmation is required because the available site material does not identify a verifiable legal operator or licence.
- The homepage's 404 response means service availability and booking mechanics require confirmation through an independent route.
- External security detections require resolution before sensitive interaction is considered.

Summary Verdict

The overall posture is critical and unsuitable for sensitive interaction. Available evidence does not support treating the website as a legitimate, verified counterparty, and the confirmed external threat detections create a substantial basis for non-engagement pending independent resolution.

Infrastructure Integrity

The site is fronted by Cloudflare CDN/WAF infrastructure, and all observed addresses were CDN edge addresses rather than a directly exposed origin. This reduces direct origin exposure but is only a protective infrastructure characteristic; it does not offset the site’s external reputation findings or establish legitimacy.

EVIDENCE

- Served through AS13335, CLOUDFLARENET—Cloudflare, Inc., US.
- Four observed addresses were identified as Cloudflare edge infrastructure, with zero likely origin addresses.
- The observed IPv4 edge address was 104.21.41.171.

Closing Assessment

Enterprise users should suspend credentials, payment, and other sensitive activity on this domain until independent operator, service, and threat-status checks produce a documented resolution.

Written analysis generated 2026-09-22 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

01 Governance Risk

- The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- The public registration record for this domain is incomplete.
Registration and ownership rule:KF_WHOIS_INCOMPLETE
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	25%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of reservphotoinstay.one.

- The request stayed on reservphotoinstay.one. It was not redirected to another domain. CLEAR
- Registration is published under Gname.com Pte. Ltd.. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-06-24. NOTED
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about reservphotoinstay.one at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
