Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

The website is the public-service information portal of Sveriges Riksbank, Sweden's central bank, presenting monetary-policy material, financial statistics, payment-system guidance, research, publications, and institutional resources for public and professional use.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, deceptive forms, or other fraud signals were observed. The homepage consistently presents a central-bank information service rather than a commercial investment proposition: its coverage of stablecoins and the e-krona forms part of public-policy content, not a token sale or cryptocurrency solicitation. The long-established domain, substantial public traffic footprint, clean external reputation, and absence of suspicious browser behaviour strongly support the authenticity of the site.

- The homepage identifies itself as "Sveriges Riksbank" and provides extensive central-bank subject matter without sales, investment, or deposit-solicitation mechanics.
- The domain was registered in 1994 and is approximately 32.56 years old; the registrar is CSC Corp Domains.
- External reputation checks recorded zero malicious and zero suspicious detections, no malicious safe-browsing finding, no abuse reports, and no signature matches.
- The domain holds global traffic rank 61,305, placing it within the top one million domains.

Regulatory Verification Notes

The assessed homepage clearly describes an institutional public-service function, but the supplied page evidence does not establish a specific licensing claim, license number, or registry entry. That is not an adverse indicator for a central-bank information portal and does not create a scam inference. No conflicting legal-entity names were identified, and the available third-party broker context produced no matching broker record; this is neutral contextual information rather than a licensing determination.

- The homepage classifies the site's function through content on monetary policy, financial stability, payments, cash, market statistics, research, and central-bank operations.
- The homepage presents policy information, statistics, publications, and APIs rather than regulated brokerage or retail investment services.
- The assessed broker-intelligence context returned no matching broker profile.

- The domain registration record identifies an owner reference and shows expiration on 31 December 2026, with no assessed governance or ownership-opacity condition.

What to Verify Next

For formal institutional onboarding, the domain should be matched against Sveriges Riksbank’s independently obtained official communications, and the legal authority for any particular service should be checked in the governing statutory or regulatory source applicable to that service. Any API integration should additionally validate endpoint documentation and certificate details through the institution’s published technical materials.

- The homepage provides dedicated navigation for interest-rate and exchange-rate APIs, including methodology, series definitions, and publication processes.
- The site separates operational subjects such as the RIX payment system, Swestr administration, banknotes and coins, and financial-market reporting, enabling service-specific due diligence.

Summary Verdict

The website is a legitimate, established, and trustworthy institutional portal. Its coherent public-service identity, mature provenance, authoritative subject matter, strong usage footprint, and clean security reputation converge without contradiction. Normal interaction, including account login and standard use where offered, is appropriate.

Infrastructure Integrity

The site resolves directly to infrastructure operated by Optimizely AB in Sweden, without a detected CDN or WAF layer. The visible hosting topology is not an adverse finding: the infrastructure resolved normally, received a trusted assessment, and uses valid transport encryption; these controls mitigate connection risk but are not, by themselves, proof of institutional legitimacy.

- The site is served from AS30811, operated by EPISERVER_AS – Optimizely AB, SE; the observed server address is located in Sweden.
- The site’s TLS certificate was issued by WE1 with domain validation and is valid until 8 September 2026.

Closing Assessment

Prospective users and institutional counterparties may engage with the site through normal operational controls appropriate to an established public institution.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of riksbank.se.

- The request stayed on riksbank.se. It was not redirected to another domain. CLEAR
- Registration is published under CSC Corp Domains. CLEAR
- DNS for this domain is served by swip.net, across 4 name servers. NOTED
- The registration is paid up to 2026-12-31. NOTED
- It is hosted on EPISERVER_AS, from a server in SE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about riksbank.se at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
