

Is risha.com a scam? TrustSniffer's high-risk assessment: 5/100

risha.com

Verdict

5

OUT OF 100

CRITICAL RISK

risha.com shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-08-20 by automated analysis. Classification confidence 75%.

What this site appears to be

Corporate website for Risha Engineering Group, Inc. presenting company overview, services, completed projects, news, and contact/career information.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

https://risha.com/

What risha.com served when TrustSniffer captured it on 2026-08-20. The page may look different now.

Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2001.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

Full analysis

Overview

Risha Engineering is presented as a corporate engineering firm serving the Western United States, with services spanning commercial, civic, education, healthcare, entertainment, industrial, residential, and other market sectors; its apparent business model is consultancy and project delivery funded through client contracts and project fees.

Scam/Impersonation Risk

The site's presentation is coherent with a conventional engineering-company website: the homepage and company pages provide service descriptions, completed projects, careers, news, and links to social platforms, while observed behavior showed no login form, wallet connection, hidden form, cloaking, or other high-risk interaction pattern. However, these benign page-level characteristics are outweighed by confirmed external reputation contradictions: the domain is blacklisted by multiple sources, including two independent blacklist indications, and four evaluated detections classified it as malicious with one additional suspicious detection. No conflicting legal-entity names, direct brand-impersonation indicators, or phishing forms were observed on the captured pages, but the confirmed blacklist status makes sensitive interaction inappropriate pending resolution and independent validation.

EVIDENCE

- The homepage and company pages identify “Risha Engineering” and present engineering services, market sectors, completed projects, news, careers, and contact information.
- The behavioral capture recorded no login form, hidden form, wallet-provider activity, clipboard manipulation, cloaking, or suspicious inline scripts.
- The domain was registered in 1998 and is 27.65 years old.
- The archive contains 242 snapshots spanning 2001–2026, covering 26 tracked years.

Regulatory Verification Notes

The site presents a professional engineering-company identity and appears to describe a conventional contract-services business rather than a regulated financial product. The available material does not state a licensing authority or license number, so any professional registration or sector-specific authorization remains a verification matter rather than an established fact. The apparent operator identity is not independently verified by the supplied evidence, and the external blacklist findings materially reduce confidence despite the site’s coherent corporate content. No matching broker-reputation record was identified in the supplied third-party context.

EVIDENCE

- The company, services, market-sectors, completed-projects, careers, and contact pages describe engineering and consulting activity but do not provide a licensing authority or license number.
- The site’s transport encryption uses a DV certificate issued by YR2, valid through 2026-10-19.
- The site is hosted on AS22611, operated by INMOTION – InMotion Hosting, Inc., in the United States.

What to Verify Next

Before any credential submission, payment, contractual commitment, or exchange of sensitive business information, the organization should independently confirm the company’s legal identity and any applicable professional registration through the relevant government or professional registry. Contact channels should be cross-checked using an independently sourced business record or an offline route, and the external reputation findings should be validated with the relevant security or domain-reputation providers before the site is permitted for business use. Any engagement should remain limited to passive review until those checks produce a consistent result.

EVIDENCE

- The supplied identity assessment connects the site to a real-world entity only as “likely,” not as independently verified.
- The captured site exposes company, contact, careers, and social-presence pages that can be compared against independently sourced records.
- The site’s technical capture completed successfully with an HTTP 200 response and no sensitive interaction surface detected.

Summary Verdict

The overall posture is **critical trust risk**. A credible corporate presentation and long operating history do not offset the confirmed external reputation contradictions, and the available evidence does not support permitting sensitive interaction with the site.

Infrastructure Integrity

The website is protected by Fastly CDN/WAF infrastructure, with observed CDN edge servers and additional potential origin candidates. This provides a mitigating layer against routine exposure and abuse, but infrastructure protection is not evidence that the underlying website or operator is trustworthy.

Closing Assessment

The appropriate enterprise disposition is to defer sensitive interaction and restrict the site to passive review until independent identity, authorization, contact-channel, and reputation checks are completed and the confirmed external detections are resolved.

Written analysis generated 2026-08-20 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

- 01 Governance Risk

 - Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.
Registration and ownership rule:KF_WHOIS_PRIVATE
 - The registration record withholds contact details for the operator.
Registration and ownership rule:KF_WHOIS_HIDDEN
- 02 Sensitive Interaction Risk

 - The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.
Analysis engine signal:direct_threat
 - An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.
External reputation rule:EXT_BLACKLIST_CRITICAL

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	39%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of risha.com.

- The request stayed on risha.com. It was not redirected to another domain. CLEAR
- Registration is published under TUCOWS.COM, CO.. CLEAR
- DNS for this domain is served by inmotionhosting.com, across 2 name servers. NOTED
- The registration is paid up to 2026-12-30. NOTED
- The earliest public archive of this site is from 2001-04-28. CLEAR
- It is hosted on INMOTION, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about risha.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
