

Is rocketboost.de legit? TrustSniffer's high-trust assessment: 100/100

rocketboost.de

Verdict

100

OUT OF 100

HIGH TRUST

rocketboost.de appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-21 by automated analysis. Classification confidence 50%.

What this site appears to be

Commercial landing page for RocketBoost, a service offering quick website creation with a free preview, fixed-price packages starting at €499, optional monthly hosting plans, testimonials, FAQs, and contact emails. Appears to be a legitimate agency offering B2B services.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

What rocketboost.de served when TrustSniffer captured it on 2026-08-21. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2020.
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.

Full analysis

Overview

RocketBoost is a commercial web agency website offering rapidly produced business websites, a free preview, fixed-price packages starting at €499, and optional hosting and maintenance services. Its apparent business model is to generate revenue from one-time website projects and recurring service plans for small and medium-sized businesses.

Scam/Impersonation Risk

No contradictions were observed: the site does not present apparent brand-impersonation, phishing, malicious-content, or credential-harvesting indicators. The homepage presents a coherent agency service model, while observed browser behavior showed no cloaking, hidden forms, wallet-drainer activity, clipboard manipulation, or suspicious external form destinations. A reputational signal exists for the shared delivery address 185.158.133.1, but the reports apply to shared infrastructure rather than being specifically attributed to RocketBoost; this materially limits their relevance to the website itself.

EVIDENCE

- The homepage is categorized as a corporate web-agency landing page and contains no identified red-flag content or brand-impersonation pattern.
- Behavioral testing recorded two successful runs with no cloaking, hidden forms, external password submissions, wallet activity, or clipboard manipulation.
- 51 abuse reports were recorded against 185.158.133.1 with a confidence score of 46; the attribution identifies shared CDN infrastructure rather than the website operator.

Regulatory Verification Notes

The available content is consistent with a small commercial service provider rather than a financial or otherwise visibly regulated business. The site presents service information, pricing, testimonials, FAQs, contact pathways, and a login function, but the supplied content does not show a corporate registration reference or license number. For this business model, that is a transparency item for ordinary merchant due diligence rather than evidence of deception. The real-world operator remains unverified, so the apparent legitimacy of the website should not be treated as independent proof of the legal entity behind it.

EVIDENCE

- Domain continuity is dated to 2020, with an age of approximately 6.39 years.
- Five web-archive snapshots are recorded across 2020–2024, with the historical record spanning 2020-03-30 to 2026-02-26 and 7 years tracked.
- The site is served through AS13335, Cloudflare, Inc.; its infrastructure country is recorded as AE.
- The transport certificate uses WE1 as issuer, provides DV validation, and is valid to 2026-10-07T23:27:38+00:00.

What to Verify Next

Before credential or payment interactions, an intending customer should independently confirm the agency's legal trading identity, contractual terms, cancellation and refund provisions, and the payment provider's buyer-protection arrangements. Where the service is purchased for a business, the contracting entity and invoice details should match the entity named in the agreement. Official contact channels should also be confirmed through an independent route before sensitive account or payment matters are discussed.

EVIDENCE

- The homepage provides FAQs, pricing information, testimonials, contact pathways, and a login function that can be used to compare the site's operational claims with its contractual documentation.
- The site's detected interaction surface includes contact-request, checkout/payment, newsletter, and login form types.
- No untrusted form destination or sensitive-form anomaly was identified during behavioral inspection.

Summary Verdict

The overall posture is **high trust and low risk**, and the available evidence is consistent with an established, apparently legitimate website. This conclusion concerns the website's observed risk posture; it does not

independently verify the real-world operator identity.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a meaningful layer of resilience and exposure reduction, with observed traffic terminating on the Cloudflare edge rather than a directly exposed origin address. This is a mitigating infrastructure characteristic, not proof of the operator’s legitimacy.

Closing Assessment

Normal business engagement is proportionate to the assessed posture, provided ordinary independent checks of the contracting party, commercial terms, and payment protections are completed before credentials or funds are submitted.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Signals weighed against the site

- AbuseIPDB: 51 reports on hosting IP 185.158.133.1 (Internet Utilities Europe and Asia Limited, Content Delivery Network), 46% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of rocketboost.de.

- The request stayed on rocketboost.de. It was not redirected to another domain. CLEAR
- DNS for this domain is served by udag.de, across 3 name servers. NOTED
- The earliest public archive of this site is from 2020-03-30. CLEAR
- It is hosted on CLOUDFLARENET, from a server in AE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about rocketboost.de at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
