

Is samba.tv legit? TrustSniffer's high-trust assessment: 90/100

samba.tv

Verdict

90

OUT OF 100

HIGH TRUST

samba.tv appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Corporate Samba TV page describing privacy choices, cookie settings, business solutions and help resources. Contains multilingual selector and cookie consent UI; focused on transparency and user privacy rather than financial or credential requests.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

At a glance

The checks that decide most of this verdict.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2013.
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.

Full analysis

Overview

Samba TV is a corporate website for television audience measurement, advertising, and business solutions. It presents privacy controls, cookie preferences, help resources, and information for business visitors, with an apparent model based on analytics services and advertising partnerships rather than direct financial services.

Scam/Impersonation Risk

No contradictions were observed between the site's stated corporate purpose, its page content, its historical continuity, and the available external reputation signals. The homepage presents a coherent Samba TV brand, links to privacy and help resources, and does not request credentials or financial information through a login or sensitive form. Interactive testing did identify hidden forms, but page inspection found no password-external forms, wallet activity, cloaking, or brand-impersonation indicators. A limited abuse-report signal was attributed to a shared provider IP associated with Framer B.V.; it is therefore an infrastructure-reputation signal rather than evidence that Samba TV itself is malicious. The available evidence supports an apparently legitimate, low-risk corporate site, while the real-world operator identity remains not independently verified.

EVIDENCE

- Domain registration records: Registered 2010-03-23 (~16.39 years old).
- Web-archive continuity: 1,323 snapshots from 2013-10-01 through 2026-07-13, spanning 14 years tracked.
- Homepage behavior: no login form, no sensitive form, no wallet-connect activity, and no detected brand impersonation.
- External reputation checks: 0 malicious detections, 0 suspicious detections, and no blacklist hit; the recorded abuse signal concerned shared infrastructure.

Regulatory Verification Notes

The site's legal and privacy material is appropriate to its stated corporate model: the homepage exposes a Privacy Center, Privacy Policy, Terms of Service, Cookie Policy, cookie controls, and a CCPA opt-out tool. No financial-services license claim or license number is presented, which is a disclosure point to resolve only if a proposed engagement involves regulated services beyond the analytics and advertising activities described. The site's Samba TV branding and linked social presence are consistent with an established corporate

presentation, but they do not independently prove the legal identity of the operator. A separate broker-reputation dataset returned no match and should be treated only as contextual support, not as a licensing determination.

EVIDENCE

- Registration infrastructure: registrar ENOM, INC.; creation date 2010-03-23T21:48:03Z; expiration date 2027-03-23T21:48:03Z.
- Hosting telemetry: served from AS16509, AMAZON-02 - Amazon.com, Inc.; observed country NL.
- Transport security: TLS certificate issued by YE1, validation level DV, valid to 2026-09-19T21:27:11+00:00.
- Homepage legal content: Privacy Center, Privacy Policy, Terms of Service, Cookie Policy, CCPA opt-out, and cookie-settings controls are present.

What to Verify Next

Before credential or payment interactions, an enterprise or consumer counterparty should independently confirm the legal entity operating the service through an appropriate corporate registry and compare that result with the contractual and privacy documents. The applicable data-protection obligations and opt-out mechanisms should be checked against the proposed use of the service. Official contact channels should also be confirmed through an independent route, and any commercial transaction should use payment protections and remedies appropriate to the engagement.

EVIDENCE

- Homepage: identifies the Samba TV brand and directs business visitors to business solutions.
- Privacy Center and privacy materials: provide the stated data-use, consent, deletion, and opt-out framework.
- Terms of Service and Cookie Policy: provide the contractual and tracking-policy documents for independent review.

Summary Verdict

The overall posture is **high trust and low risk**, with the available evidence consistent with an established, apparently legitimate corporate website. No scam, phishing, impersonation, or identity-conflict indicators were observed, although the operator's real-world identity is not independently verified.

Infrastructure Integrity

The site is protected by Cloudflare CDN/WAF infrastructure, with observed addresses belonging to Cloudflare edge servers and no origin candidate exposed during the analysis. This materially reduces direct origin exposure and supports infrastructure resilience, but remains a mitigating technical control rather than proof of corporate legitimacy.

Closing Assessment

Ordinary independent checks of operator identity, applicable policies, and payment protections should be completed before credentials or payment details are exchanged.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Signals weighed against the site

- AbuseIPDB: 4 reports on hosting IP 31.43.161.6 (Framer B.V., Content Delivery Network), 13% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	LIKELY
Identity score	79/100
Identity verification confidence	39%

- Trusted social count=3

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of samba.tv.

- The request stayed on samba.tv. It was not redirected to another domain. CLEAR
- Registration is published under ENOM, INC.. CLEAR
- DNS for this domain is served by awsdns-08.org, across 4 name servers. NOTED
- The registration is paid up to 2027-03-23. NOTED
- The earliest public archive of this site is from 2013-10-01. CLEAR
- It is hosted on AMAZON-02, from a server in NL. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about samba.tv at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
