- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2024.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a Portuguese-language corporate platform through which SAT TV markets bundled television content, cloud-camera monitoring, residential protection, and 4G/5G mobile connectivity to Brazilian internet providers, with a business model based on commercial partnerships and recurring service subscriptions.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing behavior, or adverse threat-reputation indicators were observed. The site presents coherent, sector-specific content supported by named contacts, telephone channels, a physical address, testimonials, and implementation information. Its stable behavioral profile—without hidden forms, credential capture, suspicious scripts, cloaking, or unauthorized external requests—further supports the conclusion that it is a legitimate corporate website rather than a deceptive acquisition channel.

- The homepage identifies SAT TV consistently and presents detailed service, contact, testimonial, event, and implementation content without impersonation indicators.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no reported abuse, and inclusion within the top one million domains at traffic rank 156,604.
- The domain was registered in 2021 and is approximately 5.25 years old; the registration names William Antonio Knob and runs through 2027-05-06.
- The web archive contains 19 snapshots spanning 2024-05-06 to 2026-04-19, covering 3 tracked years with no detected repurposing or semantic drift.

Regulatory Verification Notes

The assessed pages do not make a specific licensing claim or provide a regulator, authorization number, or corporate-registration identifier. This is a limited disclosure issue rather than evidence of misconduct, particularly because the site presents itself as a B2B telecommunications and value-added-services supplier rather than as a financial or investment provider. No matching broker-reputation entry was identified, which has no material bearing on this non-financial business model.

- The homepage describes commercial services for internet providers but does not present a license number, named licensing authority, or regulatory-status claim.
- The site supplies direct business-contact details and a physical address, providing identifiable channels for commercial due diligence.
- The site's transport encryption uses a valid DV certificate issued by YE1, valid to 2026-09-08.

- The homepage contains no cryptocurrency, investment, brokerage, yield, or financial-return propositions.

What to Verify Next

Before entering a material commercial relationship, prospective counterparties should confirm the contracting legal entity and registration details through the applicable Brazilian corporate registry, reconcile the published address and telephone channels through an independent business source, and review the service agreement for content rights, data-protection responsibilities, service levels, termination provisions, and subcontractor dependencies.

- The homepage invites internet providers to speak with a specialist and describes technical and commercial implementation support, making contracting-entity confirmation relevant to onboarding.
- The site advertises a national service reach, supporting verification of operational coverage and fulfilment arrangements for the intended region.
- Testimonials and industry-event references provide potential independent reference points for commercial validation.
- The cloud-monitoring and residential-protection offerings imply processing and operational responsibilities that should be allocated expressly in contractual documentation.

Summary Verdict

The website has a high-trust, established corporate posture supported by convergent identity, content, historical, behavioral, and reputation evidence. It is assessed as legitimate and trustworthy, with no observed contradictions; normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The site resolves directly to a likely origin server rather than operating behind a detected CDN or WAF. Its stable Hostinger-hosted configuration and valid encrypted transport provide sound baseline infrastructure integrity, although hosting architecture alone is not proof of organizational legitimacy.

- The hosting infrastructure is served from AS47583 (AS-HOSTINGER — Hostinger International Limited, CY) at a single resolved IP geolocated to Lithuania.
- Infrastructure analysis identified one likely origin IP, no CDN edge addresses, and no unresolved routing condition.

Closing Assessment

Normal engagement is appropriate, while standard supplier onboarding and contractual due diligence should be completed before establishing a material business dependency.

Written analysis generated 2026-08-04 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	73/100

Identity verification confidence	74%
----------------------------------	-----

- Trusted social count=1

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of sattvgo.com.br.

- The request stayed on sattvgo.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by co.uk, across 4 name servers. NOTED
- The registration is paid up to 2027-05-06. NOTED
- The earliest public archive of this site is from 2024-05-06. CLEAR
- It is hosted on AS-HOSTINGER, from a server in LT. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about sattvgo.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
