

Is scloud.sg legit? TrustSniffer's high-trust assessment: 100/100

scloud.sg

Verdict

100

OUT OF 100

HIGH TRUST

scloud.sg appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 70%.

What this site appears to be

Corporate site for SCloud, a cloud service provider offering a broad portfolio of products (compute, storage, databases, CDN, security, managed big data, Kubernetes, VPN, etc.), regional data center footprint, contact info, and calls-to-action to register or contact sales.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2015.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

SCloud is a corporate cloud-service website presenting enterprise infrastructure and platform services, including public, private, and hybrid cloud, compute, storage, databases, networking, security, managed services, Kubernetes, VPN, and AI deployment. Its apparent business model is to sell cloud subscriptions, dedicated hosting, managed services, support, and consulting, with calls to register, use the console, or contact sales.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there were no phishing, impersonation, blacklist, or malicious-reputation indicators, and no conflicting legal identities were identified. The site's corporate cloud-provider presentation is consistent with its stated commercial purpose, while behavioral testing found no cloaking, hidden forms, wallet activity, clipboard manipulation, or password-exfiltration form. The available evidence therefore supports an apparently legitimate, low-risk website, although the real-world operator identity remains independently unverified.

EVIDENCE

- The homepage presents a coherent corporate cloud-provider proposition with product navigation, customer calls-to-action, and business contact pathways.
- External reputation telemetry recorded no malicious or suspicious detections and no blacklist hit for the website.
- The domain was registered on 2020-03-27 and is approximately 6.38 years old through the recorded registration period; registrar: Key-Systems GmbH.
- Web-archive coverage records 68 snapshots spanning 2015–2026, with 12 years tracked and no suspicious repurposing identified.

Regulatory Verification Notes

The website appears to operate as a commercial cloud-services provider rather than presenting itself as a financial or investment service. No licensing authority or license number is claimed in the supplied site evidence, so any service-specific corporate, telecommunications, data-protection, or contractual requirements remain matters for independent confirmation rather than evidence of deception. The site does provide contact and office-location information, but the evidence does not independently connect those claims to a verified legal operator. The clean external reputation, established registration history, professional product content, and

mainstream certificate issuance are consistent with an established site, while the absence of independently verified operator identity limits the strength of that conclusion.

EVIDENCE

- The homepage identifies SCloud as a cloud service provider and describes enterprise infrastructure, managed services, regional coverage, and AI-related deployment services.
- The supplied site content contains no claimed licensing authority or license number.
- The site's hosting infrastructure resolves through AS135377, UCLOUD-HK-AS-AP / UCLOUD INFORMATION TECHNOLOGY (HK) LIMITED, HK.
- The site uses a DV TLS certificate issued by Go Daddy Secure Certificate Authority - G2, valid to 2026-09-30.

What to Verify Next

Before credential or payment activity, an enterprise counterparty should independently confirm the legal entity operating SCloud, ensure that the contracting entity matches the entity named on quotations and service agreements, and review applicable service terms, renewal provisions, data-processing commitments, and refund or payment-protection arrangements. Any required sector-specific registration should be checked against the relevant official registry. Official support and sales channels should also be confirmed through an independently sourced route before sensitive account or billing discussions.

EVIDENCE

- The homepage provides registration, console-login, and contact-sales calls-to-action, making identity and access-channel confirmation relevant before account use.
- The site includes About, Contact, Documentation, FAQ, and service-navigation areas that can be compared with contractual and billing documentation.
- The business model described in the site evidence involves subscriptions, dedicated hosts, managed services, and support or consulting contracts, making contract-entity and payment-term checks material.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website. Its overall posture is high trust and low risk, with the principal qualification being that the real-world operator identity is not independently verified. No scam or impersonation contradiction was observed.

Infrastructure Integrity

The website is served directly from a resolved UCLOUD infrastructure endpoint in Hong Kong, with no CDN or WAF detected and one likely origin IP identified. This direct hosting arrangement does not itself indicate malicious activity; it provides less intermediary shielding than a conventional edge-delivery architecture but remains compatible with the site's positive overall assessment.

Closing Assessment

Normal business engagement may proceed in proportion to the value and sensitivity of the proposed interaction, subject to independent confirmation of the contracting entity, service terms, and payment protections before credentials or funds are committed.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of scloud.sg.

- The request stayed on scloud.sg. It was not redirected to another domain. CLEAR
- Registration is published under Key-Systems GmbH. CLEAR
- DNS for this domain is served by dnspod.net, across 2 name servers. NOTED
- The registration is paid up to 2028-03-27. CLEAR
- The earliest public archive of this site is from 2015-02-22. CLEAR
- It is hosted on UCLOUD-HK-AS-AP, from a server in HK. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about scloud.sg at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
