

Is sensorsdata.cn legit? TrustSniffer's high-trust assessment: 80/100

sensorsdata.cn

Verdict

80

OUT OF 100

HIGH TRUST

sensorsdata.cn appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

What this site appears to be

Chinese-language corporate landing page for Sensors AI and enterprise data analytics products with product descriptions, use cases, certifications, customer claims and calls to action for demos and contact.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2015.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

sensorsdata.cn is a Chinese-language corporate website for Sensors Data, presenting enterprise data analytics, marketing-technology services, and the Sensors AI product as a SaaS offering supported by demonstrations, consulting, implementation, licensing, and ongoing support.

Scam/Impersonation Risk

No contradictions were observed: the available evidence shows no phishing, impersonation, malicious-content, or blacklist indicators. The homepage presents a coherent enterprise software proposition, including Sensors AI capabilities for analysis, strategy, automated execution, and performance review, together with use cases covering store operations, user lifecycle management, campaign operations, and brand operations. The site also uses a demonstration/contact workflow rather than a login or payment-collection form. Some outcome figures displayed on the homepage, such as increases in customer acquisition, recall, retention, and campaign performance, are marketing claims rather than independently validated results; this is a claims-verification issue, not evidence of impersonation. The overall evidence is therefore consistent with an established, apparently legitimate corporate website, while the real-world operator remains independently unverified.

EVIDENCE

- The homepage identifies a corporate enterprise-data and AI offering and describes Sensors AI as executing an end-to-end “analysis, strategy, action, review” workflow.
- The homepage contains one demo/contact request form, with no detected login form, hidden sensitive form, wallet connection, or password submission.
- Domain history records 471 archive snapshots spanning 12 tracked years, with first capture on 2015-07-03 and last capture on 2026-07-26.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no external blacklist or phishing result.

Regulatory Verification Notes

The business model presented is enterprise SaaS and professional services rather than a financial-investment or consumer-trading service. The available site content does not state a regulatory license or registration number, and the supplied evidence does not independently verify the legal entity operating the domain; this is a transparency and contracting-party verification gap, not an identity contradiction. The homepage refers to certifications, customer counts, and enterprise deployments, but those representations should be distinguished

from independently confirmed corporate or regulatory status. A separate broker-reputation dataset returned no match, which is a limited contextual signal and not a licensing determination.

EVIDENCE

- The homepage describes enterprise analytics, marketing technology, AI services, paid software licensing, implementation, and support.
- The homepage presents certifications and customer-related claims but does not state a license authority or license number.
- The site's page classification is a corporate/product landing page, with a low page-level risk assessment and no listed content red flags.

What to Verify Next

Before credential or payment interactions, the prospective counterparty should independently confirm the legal entity named in the contract, its registered business details, and the ownership of the domain through authoritative corporate records. Any claimed certifications, customer references, and performance figures should be validated through the issuing bodies or independently sourced customer contacts. Contract terms, data-processing responsibilities, support obligations, cancellation provisions, and payment-protection arrangements should also be reviewed before an enterprise engagement.

EVIDENCE

- The homepage provides demo and contact calls to action, creating a clear point at which the contracting entity and service terms should be confirmed.
- The site describes certifications and customer outcomes without supplying independent validation in the available page evidence.
- The available identity-verification status is unverified, so the website's corporate presentation is not by itself proof of the real-world operator.

Summary Verdict

The overall posture is high trust and low risk, with the evidence consistent with an established, apparently legitimate website and no observed scam or impersonation contradictions. This classification supports ordinary business interaction, but it should not be interpreted as independent proof of the operator's identity.

Infrastructure Integrity

The site is served from AS23724, CHINANET-IDC-BJ-AP operated by IDC, China Telecommunications Corporation, in China, with no CDN detected and one likely origin address identified. Transport encryption is provided by a valid RapidSSL TLS RSA CA G1 certificate using domain validation, currently valid through 2027-03-25; this supports secure transmission but is only a mitigating technical control and does not establish corporate legitimacy.

Closing Assessment

Proceed with proportionate ordinary diligence before submitting credentials or making payments, particularly by confirming the contracting counterparty, service terms, and available payment protections through independent channels.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of sensorsdata.cn.

- The request stayed on sensorsdata.cn. It was not redirected to another domain. CLEAR
- The earliest public archive of this site is from 2015-07-03. CLEAR
- It is hosted on CHINANET-IDC-BJ-AP, from a server in CN. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about sensorsdata.cn at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a

legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
