Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2018.
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.

Full analysis

Overview

Session Telecoms is a South African business-to-business telecommunications provider offering VoIP, FTTX connectivity, billing infrastructure, customer support, and reseller enablement through a zero-capital-expenditure model intended to let partners begin selling services using the company's platform and training.

Scam/Impersonation Risk

No identity contradictions, phishing indicators, brand impersonation, or confirmed malicious reputation findings were observed. The homepage consistently identifies Session Telecoms (Pty) Ltd and presents a coherent corporate service model rather than deceptive financial, cryptocurrency, or consumer-investment mechanics. The long-established domain and sustained historical record further support continuity of identity, with no evidence of suspicious repurposing or material semantic drift.

- The homepage identifies the business as "Session Telecoms (Pty) Ltd" and provides corporate service, support, policy, ticketing, contact, and login navigation.
- The domain was registered in 2016 and is approximately 10.15 years old; GoDaddy.com, LLC is the registrar, with registration valid through 2027-06-10.
- The web archive contains 68 snapshots spanning 2018-06-20 to 2026-05-12, covering 9 tracked years with no suspicious repurposing detected.
- Independent threat screening recorded no malicious or suspicious detections, and the domain holds an established top-one-million traffic presence.

Regulatory Verification Notes

The site provides a clear legal company name and links to general terms, data-service terms, a privacy policy, an acceptable-use policy, and PAIA/access-to-information material. These disclosures are consistent with an operating South African telecommunications business. The supplied pages do not establish whether any sector-specific authorization is claimed or required; this is a limited due-diligence point rather than evidence of illegitimacy. No matching third-party broker record was identified, but broker-oriented intelligence is not materially relevant to the stated telecommunications model.

- The homepage's legal and policy navigation includes general terms, data-service terms, privacy, acceptable-use, child-safety, and access-to-information pages.
- The homepage describes almost a decade of market experience and a business model based on connectivity, billing, infrastructure, consulting, and reseller support.

- The site is served from AS58182 (Wix.com Ltd., IL).
- The site’s transport encryption uses a valid YR1-issued domain-validated certificate, expiring 2026-09-07.

What to Verify Next

Standard institutional onboarding should confirm the legal entity against the applicable South African company register, determine whether the contracted telecommunications services require sector-specific authorization, and reconcile the resulting entity details with the proposed agreement and billing account. Official commercial and support channels should also be confirmed through an independently obtained corporate contact before establishing material contractual commitments.

- The homepage supplies the legal name needed for an independent corporate-registration search.
- The site provides dedicated contact, ticketing, online-application, and account-login pathways that can be reconciled during onboarding.
- The policy navigation provides documentary starting points for reviewing service terms, privacy handling, acceptable use, and information-access obligations.

Summary Verdict

The website is legitimate, established, and trustworthy, supported by consistent corporate identity, sustained operational provenance, professional disclosures, clean external reputation, and coherent business content. No contradictory evidence was observed, and normal interaction—including account login and standard use—is appropriate.

Infrastructure Integrity

The website resolves to a Wix-hosted address without a separately identified CDN edge or concealed-origin arrangement. Its valid encrypted transport and mainstream managed hosting are positive operational safeguards, although infrastructure controls are supporting factors rather than independent proof of corporate legitimacy.

Closing Assessment

Prospective customers and partners may proceed under routine enterprise procurement, contracting, and account-security controls.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of sessiontelecoms.co.za.

- The request stayed on sessiontelecoms.co.za. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by domaincontrol.com, across 2 name servers. NOTED
- The registration is paid up to 2027-06-10. NOTED
- The earliest public archive of this site is from 2018-06-20. CLEAR
- It is hosted on wix_com, from a server in IL. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about sessiontelecoms.co.za at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
