

Is sharethis.com legit? TrustSniffer's high-trust assessment: 100/100

sharethis.com

Verdict

100

OUT OF 100

HIGH TRUST

sharethis.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-13 by automated analysis. Classification confidence 55%.

What this site appears to be

ShareThis marketing/product page describing website tools (share buttons, consent management), data solutions, analytics, and integrations. Focus on privacy controls and publisher/vendor settings; contains marketing copy and links to product pages and developer APIs.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

ShareThis is a corporate SaaS and data-solutions website presenting social-sharing tools, consent-management and privacy products, audience and analytics services, developer integrations, and enterprise data offerings for publishers and advertisers.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent corporate/product model built around share buttons, follow and reaction tools, image sharing, a privacy policy generator, consent management, audience segments, curated data feeds, identity solutions, and developer APIs. Its content is consistent with a conventional software and data-services business rather than a phishing or impersonation operation; no deceptive red flags, malicious detections, suspicious redirects, hidden forms, or wallet-related behavior were identified. The available evidence therefore supports an apparently legitimate, established website, while not independently proving the real-world operator's identity.

EVIDENCE

- The homepage is classified as a corporate/product marketing page and describes SaaS tools, privacy controls, data products, analytics, and integrations.
- The homepage contains no login form, sensitive form, hidden form, or untrusted form destination; the observed behavior recorded zero wallet-connection, wallet-drainer, clipboard-hijacking, and cloaking events.
- Domain registration: 1999-03-02 (~27.47 years old), with Amazon Registrar, Inc. listed as registrar.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no confirmed phishing or blacklist contradiction.

Regulatory Verification Notes

The site appears to operate as a software, advertising-technology, data, and privacy-tools provider rather than presenting itself as a regulated financial service. No license or regulatory registration is claimed in the supplied business content, so licensing is not a substantive concern for the stated SaaS model but remains a disclosure point for any enterprise procurement, data-processing, or commercial engagement. The available material does not independently verify the legal entity behind the website; legitimacy is consequently evidence-consistent rather than proven. The site's established domain history, clean reputation, prominent traffic footprint, coherent

business description, known certificate issuer, and mainstream hosting arrangement collectively support a reassuring assessment.

EVIDENCE

- The homepage identifies business areas including Website Tools, Data Solutions, Privacy, Company, About Us, Careers, News, and Contact Us.
- The site's transport encryption uses a DV certificate issued by Amazon RSA 2048 M04, valid until 2027-03-17 23:59:59 UTC.
- The site's hosting infrastructure is associated with Amazon Registrar, Inc. for registration and Amazon's commercial web infrastructure for delivery.
- The website has a global traffic rank of 2251 and is within the top 1 million sites.

What to Verify Next

Before credential or payment interactions, an enterprise or prospective customer should independently confirm the contracting legal entity through the relevant corporate registry, review the site's privacy, terms, data-processing, and return or cancellation provisions, and confirm that the intended support and contracting channels are official. Payment arrangements should use protections appropriate to the transaction and should be reconciled with the independently confirmed entity.

EVIDENCE

- The homepage provides navigational routes to About Us, Contact Us, Privacy, Company, and Support content for use in that review.
- The site advertises developer APIs and integrations, making confirmation of data-use, security, and contractual terms relevant to procurement.
- The supplied page analysis recorded no sensitive input form or untrusted destination, so credential and payment verification should be performed at the intended official endpoint rather than inferred from marketing content.

Summary Verdict

ShareThis presents a **high-trust, low-risk posture** and is apparently legitimate on the evidence available. Its long-established presence, coherent commercial purpose, clean external reputation, and stable technical presentation support normal consideration for ordinary business interaction, although the operator's real-world identity remains independently unverified.

Infrastructure Integrity

The site is delivered through AWS CloudFront CDN/WAF infrastructure, with all four observed addresses functioning as Amazon edge servers and no origin candidate exposed in the analysis. This is a meaningful exposure-mitigation measure, but it is treated as infrastructure protection rather than proof of corporate legitimacy.

EVIDENCE

- Served from AS16509 (Amazon.com, Inc., US); four observed edge addresses were associated with the CDN.
- CDN/WAF provider: AWS CloudFront; observed edge IP count 4 and likely origin IP count 0.

Closing Assessment

Credential or payment use should proceed only after the ordinary independent checks of entity identity, commercial terms, and payment protection have been completed.

Written analysis generated 2026-08-13 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of sharethis.com.

- The request stayed on sharethis.com. It was not redirected to another domain. CLEAR
- Registration is published under Amazon Registrar, Inc.. CLEAR
- DNS for this domain is served by awsdns-63.org, across 4 name servers. NOTED
- The registration is paid up to 2027-03-02. NOTED
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about sharethis.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
