- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Shock Media is a Netherlands-based corporate website for a managed hosting provider serving business-critical websites, webshops, applications, and infrastructure. It presents managed cloud servers, Kubernetes, private and public cloud, Linux server management, security management, application-specific hosting, 24/7 support, certifications, customer references, and recruitment information as part of a business-to-business hosting and managed-services model.

Scam/Impersonation Risk

No contradictions were observed. The site's corporate presentation is consistent with its stated managed-hosting business: the homepage describes commercial services, customer references, certifications, careers, and 24/7 support rather than investment, cryptocurrency, or credential-harvesting activity. External reputation checks recorded no malicious or suspicious detections, no phishing or impersonation indicators, and no abuse reports; the available historical record also supports continuity rather than suspicious repurposing. Limited non-whitelisted external requests and posts were observed during behavioral testing, but they did not coincide with hidden forms, password collection, wallet activity, cloaking, or other abuse patterns.

EVIDENCE

- The homepage presents managed hosting, cloud servers, managed Kubernetes, private cloud, security management, customer references, careers, and 24/7 support.
- The domain was registered on 2000-02-21T15:35:23Z and is 26.48 years old.
- The site has 538 archive snapshots spanning 2005–2026, covering 22 tracked years.
- The homepage capture contained no login form, hidden form, password-external form, wallet connection, or brand-impersonation indicator.

Regulatory Verification Notes

The available evidence is consistent with an established, apparently legitimate commercial hosting provider, but it does not independently verify the real-world operator identity. The site identifies services and presents claims relating to ISO 27001, SOC 2, and ISAE 3402 certifications; those claims should be distinguished from independently confirmed certification scope. No regulatory license or license number is presented, which is a relevant disclosure gap only if a particular service or jurisdiction requires one. The site's business model is ordinary paid hosting and managed support, not an inherently regulated financial offering. A separate broker-

reputation comparison produced no match and should be treated only as contextual support, not as a legal or licensing determination.

EVIDENCE

- The homepage and service pages describe paid managed hosting, cloud, Kubernetes, security-management, and support services for businesses.
- The site cites ISO 27001, SOC 2, and ISAE 3402 certifications within its corporate and service material.
- The domain is registered through Shock Media B.V., and the site is served from AS20847, PREVIDER-AS – Previder B.V., NL.
- The site's TLS certificate is issued by PerfectSSL, uses DV validation, and is valid through 2026-10-01T23:59:59+00:00.

What to Verify Next

Before a material commercial engagement, independently confirm the contracting legal entity, the scope and current status of any claimed certifications, and the applicable registration or licensing position for the specific service and customer jurisdiction. Procurement should also reconcile the quotation, service-level commitments, data-processing terms, renewal conditions, termination rights, and payment-protection arrangements with the formal contract. Contact-channel details should be confirmed through an independently sourced corporate record or an offline business contact before sensitive credentials or payment information are exchanged.

EVIDENCE

- The contact page provides a business contact route and telephone number, while the assessed page contained one contact form and no sensitive form.
- The site includes dedicated About Us, Contact, Careers, References, and service-navigation areas that can be compared against contractual documentation.
- The homepage states that services support websites, webshops, and applications and that personal support is available continuously.

Summary Verdict

The website has a high-trust, low-risk posture and is apparently legitimate on the basis of convergent corporate content, long-term domain continuity, clean reputation findings, and stable technical operation. The evidence supports normal business consideration, while the operator's real-world identity remains independently unverified and therefore does not warrant an unqualified assumption that every identity claim is proven.

Infrastructure Integrity

The site resolves directly to infrastructure associated with Previder B.V. in the Netherlands rather than a detected CDN edge, with two likely origin addresses identified and no CDN or WAF vendor detected. This is a conventional hosting arrangement and provides useful infrastructure attribution, although the hosting arrangement itself is a mitigating technical signal rather than proof of legitimacy.

Closing Assessment

Proceed as with a credible established supplier, subject to ordinary independent merchant-identity, contractual, certification-scope, return or termination, and payment-protection checks before credential or payment

interactions.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of shockmedia.nl.

- The request stayed on shockmedia.nl. It was not redirected to another domain. CLEAR
- Registration is published under Shock Media B.V.. CLEAR
- DNS for this domain is served by shockmedia.nl, across 3 name servers. NOTED
- The earliest public archive of this site is from 2005-01-12. CLEAR
- It is hosted on PROVIDER-AS, from a server in NL. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about shockmedia.nl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
