Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Shopsy.in presents an Indian online retail marketplace offering a broad catalogue across fashion, footwear, beauty, home furnishings, appliances, sports, toys, and electronics, with shopping, seller, support, and app-oriented functionality consistent with a consumer e-commerce business associated with the Flipkart Group.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence: there was no phishing, impersonation, blacklist, or malicious-reputation finding. The homepage has a coherent retail structure, established product categories, corporate contact content, and links to mainstream social platforms, while the captured interaction showed no login form, hidden sensitive form, wallet activity, clipboard manipulation, or cloaking. Some behavioral telemetry recorded substantial external request activity and console errors, but these were not accompanied by a confirmed abuse pattern and are more consistent with implementation or integration behavior than with an identified scam mechanism.

EVIDENCE

- Homepage: no content red flags or suspected brand impersonation; page classified as an e-commerce storefront with a low page-risk assessment.
- Homepage interaction capture: 14 external XHR requests, 3 non-whitelisted XHR requests, 24 console errors, 0 hidden forms, 0 wallet-connect runs, and 0 wallet-drainer runs.
- External reputation checks: 0 malicious detections, 0 suspicious detections, no phishing or blacklist hit, and traffic rank 8483.
- Domain registration record: registered 2016-11-23 and approximately 9.73 years old.

Regulatory Verification Notes

The available corporate and support content is consistent with a retail marketplace rather than a financial-services operation. It presents a corporate address and support pathways, and the apparent connection to Flipkart Group is supported by technical certificate and hosting details; however, the real-world operator identity remains likely rather than independently verified. No license or registration number is presented in the supplied site content, which is a disclosure point for ordinary merchant-identity and consumer-protection checks, not evidence of scam activity. Available external reputation context is clean, and no broker-related match was identified.

EVIDENCE

- Registration record: registrar GoDaddy.com, LLC; registrant organization recorded as Flipkart Group; creation date 2016-11-23T20:00:21Z and expiration date 2026-11-23T20:00:21Z.
- Hosting telemetry: served from AS9752, FKNET-IN - Flipkart Internet Pvt Ltd, IN; registry APNIC; country India.
- Transport security: GlobalSign RSA OV SSL CA 2018 issued an OV certificate for Flipkart Internet Private Limited, valid through 2027-02-11.
- Homepage and corporate/support content: provides a corporate address and support links but no stated license authority or license number.

What to Verify Next

Before credential or payment interactions, an independent check should match the merchant identity, seller terms, returns and refund process, and payment-dispute route against information obtained outside the website. The official application and account pathways should also be reached through a separately authenticated source, with support channels confirmed through an independent corporate route.

EVIDENCE

- Terms and policy pages: use these to confirm seller obligations, returns, refunds, cancellations, and dispute escalation before completing a purchase.
- Account and application pathways: confirm that the intended app and login destination are reached through an independently trusted distribution or corporate channel.
- Seller-facing pages: review the identity and transaction responsibilities of individual marketplace sellers before relying on marketplace-level assurances.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for ordinary e-commerce interaction. The assessment does not independently prove the real-world operator identity, so legitimacy should be understood as evidence-consistent rather than conclusively established.

Infrastructure Integrity

The site resolves directly to infrastructure operated by Flipkart Internet Pvt Ltd, with one identified address and no CDN edge layer or WAF vendor identified in the supplied resolution data. This reduces the amount of intermediary protection visible at the network edge but does not constitute an adverse legitimacy finding.

Closing Assessment

Standard browsing and commerce are proportionate to the observed posture, subject to the ordinary independent merchant-identity, return-policy, and payment-protection checks required before submitting credentials or payment details.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	80/100
Identity verification confidence	80%

- Trusted social count=4

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of shopsy.in.

- The request stayed on shopsy.in. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by ultradns.org, across 2 name servers. NOTED
- The registration is paid up to 2026-11-23. NOTED
- It is hosted on FKNET-IN, from a server in IN. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about shopsy.in at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
