

Is sitehosting.nl legit? TrustSniffer's high-trust assessment: 100/100

sitehosting.nl

Verdict

100

OUT OF 100

HIGH TRUST

sitehosting.nl appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 70%.

What this site appears to be

Dutch-language commercial hosting site advertising domain registration, managed hosting and email packages with pricing and feature lists. Emphasizes WordPress performance, backups, SSL and developer features like Git and Node.js support.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2002.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This is a Dutch-language commercial hosting provider website presenting domain registration, web hosting, email hosting, managed WordPress services, technical documentation, and subscription-based service packages for websites, webshops, and web applications.

Scam/Impersonation Risk

No contradictions were observed: the available evidence shows no phishing, impersonation, blacklist, or malicious-reputation indicators. The website's commercial purpose is coherent with its content, which describes hosting and email services rather than an investment, cryptocurrency, or credential-harvesting scheme. Dynamic browser activity included suspicious inline scripts and substantial page-structure changes, but the same observation found no hidden sensitive forms, external password submissions, wallet activity, clipboard manipulation, or cloaking; this is therefore best treated as an implementation-quality signal rather than evidence of impersonation. The operator's real-world identity remains independently unverified, so the apparent legitimacy of the site should not be treated as proof of a particular legal entity.

EVIDENCE

- Domain registration record: Registered 1999 (~26.93 years old) through Registrar.eu.
- Web-archive record: 103 snapshots spanning 2002–2026 (25 years tracked), with no suspicious repurposing identified.
- Homepage and browser behavior: No login form, hidden sensitive form, phishing indicator, or malicious destination was observed; two suspicious inline scripts were present.

Regulatory Verification Notes

The site presents an ordinary hosting-service business model with published package pricing and feature descriptions, including managed hosting, domain registration, email hosting, Hosted Exchange, WordPress performance services, backups, SSL, Node.js support, Git-related developer functionality, and stated uptime and performance claims. It does not present itself as a financial or otherwise regulated service, and no license or registration number is claimed in the supplied site content; this is a transparency item to confirm if a contracting process requires a named corporate counterparty, rather than evidence of a scam. The apparent commercial legitimacy is supported by a long-established registration history, a meaningful traffic footprint, clean major reputation checks, and consistent service content. A domain-validation TLS certificate is technically valid, although domain validation alone does not establish the operator's legal identity.

EVIDENCE

- Homepage: Hosting and email packages, domain registration, managed WordPress services, pricing, feature lists, contact links, and policy-related links are presented.
- Hosting infrastructure: Served from AS60404, Liteserver – The Infrastructure Group B.V., Netherlands.
- Transport encryption: TLS certificate issued by YR1 at DV validation level, valid to 2026-09-12.

What to Verify Next

Before a business engagement, procurement should obtain the contracting entity's legal name, invoicing details, applicable terms, cancellation and refund provisions, data-processing commitments, and any service-specific regulatory or contractual disclosures required by the organization's policy. Payment teams should confirm that the checkout, invoice recipient, and payment-protection arrangements correspond to the intended supplier, while credential access should use the independently confirmed official contact and support channels.

EVIDENCE

- Homepage: A shopping cart and recurring service packages are available for commercial purchase.
- Homepage navigation: Contact and documentation/knowledge-base sections are provided for operational and service verification.
- Service presentation: Package features and prices are displayed directly on the site, enabling comparison with the formal order and contractual documentation.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for its stated hosting business. No scam or impersonation contradiction was identified, but the available evidence does not independently verify the real-world operator behind the site.

Infrastructure Integrity

The site resolves through direct hosting rather than a detected CDN or WAF, with two likely origin addresses identified; this provides less edge-layer shielding than a mainstream CDN deployment but is not, by itself, evidence of malicious intent. The hosting environment is attributed to Liteserver – The Infrastructure Group B.V. in the Netherlands, AS60404, and the site uses valid DV TLS protection.

EVIDENCE

- Hosting telemetry: AS60404, Liteserver – The Infrastructure Group B.V., Netherlands; two likely origin IP addresses and no detected CDN edge addresses.
- TLS telemetry: YR1 issuer, DV validation, expiry 2026-09-12.

Closing Assessment

Normal commercial evaluation is proportionate, provided that the contracting identity, contractual terms, payment recipient, and support channels are independently confirmed before credential or payment interactions.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of sitehosting.nl.

- The request stayed on sitehosting.nl. It was not redirected to another domain. CLEAR
- Registration is published under Registrar.eu. CLEAR
- DNS for this domain is served by sitehosting.nl, across 2 name servers. NOTED
- The earliest public archive of this site is from 2002-09-23. CLEAR
- It is hosted on Liteserver, from a server in NL. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about sitehosting.nl at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
