- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2011.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is an Arabic-language news and media publication presenting current reporting, analysis, and feature content across regional, international, sports, technology, and cultural topics. Its apparent business model is advertising-supported publishing supplemented by audience-engagement services such as newsletters, notifications, mobile applications, and live radio.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent Sky News Arabia editorial service rather than a financial solicitation, credential-harvesting page, or impersonation site. External reputation checks found no malicious, suspicious, phishing, or blacklist indicators, and the site's established audience footprint is consistent with a mainstream publisher. Interaction testing did record dynamic hidden-form behavior, but no externally submitted password forms, wallet activity, clipboard manipulation, cloaking, or other confirmed abuse mechanism was identified; this is consistent with a content site using consent and engagement components rather than evidence of impersonation.

EVIDENCE

- The homepage displays Arabic editorial headlines and navigation covering Middle East, world, sports, artificial intelligence, science, technology, video, and feature content.
- Page analysis identified no red flags, no suspected brand impersonation, and no sensitive form requiring password submission.
- External reputation assessment recorded zero malicious and zero suspicious detections, with no confirmed blacklist or phishing hit.
- The domain was registered in 2010 and is approximately 16.2 years old; the site's archive contains 5,000 snapshots spanning 2011–2022, with 12 years tracked.

Regulatory Verification Notes

The site presents as a news publisher rather than a service offering regulated financial products. No regulated license claim or license number is evident in the supplied homepage content, so licensing verification is not material to ordinary news consumption but would become relevant if a separate commercial, advertising, data-partnership, or other regulated engagement were proposed. The privacy and cookie-consent references indicate that audience measurement and advertising-related processing are part of the operating model. The available

third-party broker context contains no match, and the broader identity and provenance signals support an established publication rather than a newly created or repurposed service.

EVIDENCE

- The homepage identifies a news/media service and includes privacy and cookie-policy references alongside audience-engagement functions.
- The domain registrar is MarkMonitor Inc.; registration records show creation on 2010-06-01 and expiration on 2028-06-01.
- The site is served on AS16509, Amazon.com, Inc. (US).
- The site's TLS certificate is issued by Amazon RSA 2048 M04 at DV validation level and is valid through 2026-11-12 23:59:59 UTC.

What to Verify Next

For any proposed commercial or institutional engagement beyond ordinary media use, the relevant contracting entity, privacy terms, advertising disclosures, and any sector-specific registration should be confirmed through the applicable official registry or contractual documentation. Standard organizational controls should also confirm that staff access the intended domain and approved publisher channels before establishing partnerships or exchanging non-public information.

EVIDENCE

- The supplied page evidence establishes a public editorial service but does not show a regulated license claim or license number.
- The homepage includes privacy and cookie-consent materials, making those documents the appropriate source for reviewing data-use and advertising disclosures.
- The site has a valid transport-encryption configuration and a long registration record, supporting routine domain and connection checks for organizational access.

Summary Verdict

The overall posture is **high trust**. The site's consistent editorial identity, mature operating history, clean external reputation, and convergent technical signals support classification as a legitimate and established website. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The website is protected by an AWS CDN/WAF arrangement and resolves through AS16509 edge infrastructure operated by Amazon.com, Inc. The observed addresses are CDN edge endpoints, with no origin candidates identified in the supplied infrastructure assessment; this reduces direct exposure of the underlying service and is a mitigating infrastructure characteristic, not independent proof of legitimacy.

Closing Assessment

Prospective users and organizations may proceed with normal interaction, applying ordinary enterprise controls for account management, privacy review, and any higher-value commercial engagement.

Written analysis generated 2026-08-10 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of skynewsarabia.com.

- The request stayed on skynewsarabia.com. It was not redirected to another domain. CLEAR
- Registration is published under MarkMonitor Inc.. CLEAR
- DNS for this domain is served by ultradns.biz, across 4 name servers. NOTED
- The registration is paid up to 2028-06-01. CLEAR
- The earliest public archive of this site is from 2011-05-16. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about skynewsarabia.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
