- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2008.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Smartcall Technology Solutions presents itself as an established South African wireless application and web technology provider, offering SMS, USSD, mobile-content, aggregation, web-development, and customised technology services to businesses, institutions, government departments, networks, and individuals.

Scam/Impersonation Risk

No contradictions, phishing indicators, brand-impersonation signals, or confirmed malicious-reputation findings were observed. The homepage describes a coherent corporate technology-services model, identifies Smartcall Technology Solutions as the operating entity, and states more than 18 years of industry experience. The site's historical presence is consistent with its current technology-services purpose, supporting an established identity rather than a recently repurposed or impersonating operation.

- The homepage identifies Smartcall Technology Solutions and describes SMS, USSD, mobile, content, aggregation, and web-application services.
- The site's archive contains 103 snapshots spanning 2008–2025, with 18 years tracked.
- The domain was registered in 2007 and is approximately 18.66 years old.
- External reputation checks recorded zero malicious and zero suspicious detections, with no blacklist or phishing hit.

Regulatory Verification Notes

The site presents a business-to-business technology provider rather than a financial or investment service. Its “About” content states that it operates as a Wireless Application Service Provider and follows the Wireless Application Service Providers’ Association code of conduct. The supplied pages do not show a specific licence number or formal regulatory registration, so that remains a limited disclosure point for administrative verification, not evidence of deception. The named legal entity, physical presence, service descriptions, and established operating history provide meaningful identity support.

- The “About” page states that the company serves corporates, SMEs, institutions, government departments, mobile networks, and individuals.
- The “About” page references compliance with the Wireless Application Service Providers’ Association code of conduct.
- The domain is registered through Register Domain SA to Smartcall Technology Solutions.

- The site is hosted on AS328366, FIRSTNET TECHNOLOGY SERVICES (PTY) LTD, ZA; its TLS certificate is issued by ZeroSSL RSA Domain Secure Site CA, uses DV validation, and is valid until 2027-02-18.

What to Verify Next

For procurement or regulated onboarding, the prospective counterparty should confirm the company's current corporate details and any applicable Wireless Application Service Provider registration directly with the relevant South African registry or association. Contracting parties should also validate the published business address and contact routes through an independently sourced company record before entering a material commercial agreement.

- The homepage provides corporate service descriptions and multiple contact channels.
- The “About” page identifies the operating business and its industry role.
- The site references the Wireless Application Service Providers' Association code of conduct.

Summary Verdict

The website presents as a legitimate, established, and trustworthy corporate technology-services provider. Its coherent business model, sustained historical presence, clean external reputation, and consistent technical operation support normal interaction, including account login and standard business use.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a mitigating layer around the website's network exposure. The observed infrastructure resolves through AS328366 and includes a potential origin candidate, but this does not undermine the otherwise stable technical posture.

- Cloudflare CDN/WAF protection was detected.
- The observed edge address is 102.218.53.13 on AS328366.
- The hosting provider is FIRSTNET TECHNOLOGY SERVICES (PTY) LTD, ZA.

Closing Assessment

Normal business interaction is appropriate, with ordinary supplier due diligence proportionate to the commercial value and regulatory requirements of any engagement.

Written analysis generated 2026-08-01 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of smartcalltech.co.za.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about smartcalltech.co.za at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
