Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2006.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Смолтелеком is a regional telecommunications provider presenting business and residential internet, digital telephony, interactive television, video surveillance, VPN, interconnect, infrastructure, support, and account services. Its apparent business model is subscription-based connectivity and related telecommunications contracts for individuals, businesses, and network operators.

Scam/Impersonation Risk

No contradictions, phishing indicators, brand impersonation, or confirmed malicious reputation signals were observed. The homepage presents a coherent corporate telecommunications model, with ordinary contact, service-application, and account-login functionality consistent with that purpose. Normal account login and standard service interaction are therefore appropriate.

- The homepage identifies Смолтелеком and presents telecommunications services for businesses, households, and operators.
- Behavioral testing recorded no external posting activity, hidden forms, cloaking, wallet interaction, clipboard manipulation, or suspicious scripts.
- Independent reputation checks recorded zero malicious and zero suspicious detections, with no blacklist or phishing hit.
- The domain is registered from 2003 and is approximately 22.91 years old; 624 archive snapshots span 2006–2026, covering 21 tracked years.

Regulatory Verification Notes

The site provides company, documents, support, contacts, payment, and account sections, supporting an established operating identity. No license number or regulator-specific authorization is stated in the supplied content; this is a verification item for regulated services, not evidence of deception. The available third-party broker dataset contained no matching record.

- The homepage links to “About the company,” “Documents,” “Technical support,” “Contacts,” and “Payment for services.”
- The site’s transport encryption uses a DV certificate issued by YR1, valid through 2026-10-09.
- The domain registrar is RU-CENTER-RU.
- Hosting is provided through AS197695, AS-REGRU – REG.RU, Ltd.

What to Verify Next

For any service requiring regulated authorization, confirm the provider’s applicable license or registration directly with the relevant official registry and validate payment or contractual details through the published corporate channels.

- The site presents business contracts and operator-interconnection services on its homepage.
- The homepage includes dedicated application and account-login forms.
- The site provides separate company, documents, support, contacts, and payment areas.

Summary Verdict

The site is a legitimate, established, and trustworthy telecommunications website with a coherent business identity, sustained historical presence, clean external reputation, and no observed contradiction signals. Its overall posture supports normal interaction, including account access and standard service use.

Infrastructure Integrity

The site resolves directly to a single origin address without a detected CDN or WAF layer. This provides less perimeter shielding than an edge-protected deployment, but the resolved infrastructure is stable and attributable to an identified hosting provider; this is a mitigating technical observation, not a legitimacy determination.

Closing Assessment

Normal account access, service applications, and routine customer interactions are appropriate, with regulatory confirmation reserved for services where formal authorization is required.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of smoltelecom.ru.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about smoltelecom.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
