

Is sqlite.org legit? TrustSniffer's high-trust assessment: 100/100

sqlite.org

Verdict

100

OUT OF 100

HIGH TRUST

sqlite.org appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-16 by automated analysis. Classification confidence 55%.

What this site appears to be

Official SQLite project homepage providing description, documentation, downloads, and release information for the SQLite embedded SQL database engine. Content emphasizes public-domain licensing, features, and latest release.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

The page as captured

https://sqlite.org/

What sqlite.org served when TrustSniffer captured it on 2026-08-16. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- No flags from the reputation services TrustSniffer consulted at assessment time.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

SQLite.org presents a project homepage for SQLite, an embedded SQL database engine, offering technical documentation, source-code downloads, release information, feature references, and support-oriented resources for software developers and users.

Scam/Impersonation Risk

No scam or impersonation contradictions were observed. The homepage's content is coherent with an established open-source software project: it describes SQLite as a self-contained C-language database engine, provides documentation and download pathways, and does not solicit deposits, investments, or other high-risk financial activity. The site also presents no login form, sensitive submission workflow, wallet functionality, cloaking, or suspicious browser behavior. Available reputation and visibility signals are clean and consistent with a widely established public website.

EVIDENCE

- Homepage: describes SQLite as a small, fast, self-contained SQL database engine and provides documentation, downloads, release information, and technical references.
- Homepage behavior: no sensitive forms, external posts, wallet-provider activity, clipboard manipulation, hidden forms, or cloaking were detected across two successful runs.
- Registration record: registered 2002-08-06; domain age 24.04 years.
- External reputation: malicious detections 0, suspicious detections 0, and global traffic rank 5234; the domain is within the top 1,000,000.

Regulatory Verification Notes

The site's apparent model is software distribution and open-source project support rather than a regulated financial service. Its navigation and content include About, License, Support, Purchase, documentation, and download resources; the site states that SQLite source code is public-domain and free for use. No financial-services license or independently verified corporate registration is established in the supplied site content, so legal-entity and merchant disclosures remain a routine verification point rather than evidence of deception. The available evidence is consistent with an established, apparently legitimate website, while the real-world operator identity is not independently verified. A clean broker-context result provides additional reputational context but is not a licensing determination.

EVIDENCE

- Homepage: states that SQLite source code is in the public domain and free for anyone to use for any purpose.
- Domain registration: registrar is Domain.com - Network Solutions, LLC; creation date is 2002-08-06T14:57:52Z and expiration date is 2027-08-06T14:57:52Z.
- Hosting infrastructure: served from AS63949, AKAMAI-LINODE-AP - Akamai Connected Cloud, SG.
- Transport security: TLS certificate issued by YE1, validation level DV, valid to 2026-10-30.

What to Verify Next

Before any credential or payment interaction associated with support or purchase services, independently confirm the responsible legal entity, the applicable terms and refund arrangements, and the payment-protection or chargeback options. Any licensing question should be checked against the relevant jurisdictional registry only if the proposed service involves a regulated activity. Official contact channels should also be confirmed through an independently sourced route rather than relying solely on information encountered during a transaction.

EVIDENCE

- About and License pages: suitable sources for comparing the project's stated identity, licensing description, and any operator information with independent records.
- Support and Purchase pathways: relevant locations for confirming the merchant of record, service terms, refund conditions, and payment protections before a transaction.
- Technical download and documentation pages: appropriate locations for confirming that software-related activity remains consistent with the project's stated open-source purpose.

Summary Verdict

Available evidence supports a **high-trust, low-risk posture** for the website and is consistent with an established, apparently legitimate technical project. No contradictory scam, phishing, impersonation, or identity-inconsistency signals were identified, although the operator’s real-world identity is not independently verified.

Infrastructure Integrity

The site is protected by Akamai CDN/WAF infrastructure, with observed traffic associated with Akamai Connected Cloud. This provides a meaningful layer of network protection and reduces direct exposure of the service infrastructure, but remains a mitigating technical control rather than proof of organizational legitimacy.

Closing Assessment

Normal informational use is proportionate to the available evidence; any purchase or credential exchange should follow the ordinary independent identity, terms, and payment-protection checks described above.

Written analysis generated 2026-08-16 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of `sqlite.org`.

- The request stayed on `sqlite.org`. It was not redirected to another domain. CLEAR
- Registration is published under `Domain.com - Network Solutions, LLC`. CLEAR
- DNS for this domain is served by `linode.com`, across 2 name servers. NOTED
- The registration is paid up to 2027-08-06. NOTED
- It is hosted on `AKAMAI-LINODE-AP`, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about `sqlite.org` at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
