

Is stackoverflow.co legit? TrustSniffer's high-trust assessment: 100/100

stackoverflow.co

Verdict

100

OUT OF 100

HIGH TRUST

stackoverflow.co appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Low Risk

Assessed 2026-08-17 by automated analysis. Classification confidence 55%.

What this site appears to be

Official Stack Overflow Business marketing/product page describing enterprise offerings (Stack Internal, data licensing, ads), customer testimonials, resources and blog content. Appears to be a legitimate corporate landing site.

Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
 - Module-level completeness metadata is unavailable for this legacy report.

At a glance

The page as captured

<https://stackoverflow.co/>

What stackoverflow.co served when TrustSniffer captured it on 2026-08-17. The page may look different now.

Key findings

- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.
- The operator behind the site could not be independently connected to a real-world brand or person.

Full analysis

Overview

This website is a corporate landing site for Stack Overflow Business, presenting enterprise knowledge solutions and related commercial services for organizations. Its apparent purpose is to market business offerings, explain enterprise use cases, and direct organizational prospects toward product, resource, support, and expert-contact journeys.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or other identity contradiction was observed. The page presents a coherent Stack Overflow Business corporate proposition, and the available evidence contains no credential-harvesting, hidden-form, wallet, or malicious-script indicators. A limited set of abuse reports relates to shared Amazon delivery infrastructure rather than being attributed to this website, with zero confidence in the site-level attribution; this signal is therefore materially discounted. The domain's brand-family similarity is consistent with a legitimate corporate variant, not a confirmed impersonation.

EVIDENCE

- The homepage is classified as a corporate/product landing page and records no content red flags.
- The homepage contains no login form, hidden sensitive form, password-external form, wallet interaction, or clipboard-hijacking behavior.
- Evaluated reputation checks recorded zero malicious and zero suspicious detections for the site.
- Five abuse reports concern IP address 3.33.186.135, identified as shared CDN infrastructure with confidence score 0; they are not attributed directly to the website.

Regulatory Verification Notes

Available evidence is consistent with an established, apparently legitimate enterprise software and licensing business, but the real-world operator identity is not independently verified. The homepage describes Stack Internal, Stack Data Licensing, and Stack Ads as commercial offerings, including claims concerning enterprise knowledge workflows, data licensing, advertising, ISO 27001, SOC 2 Type II, and GDPR compliance. These are business and assurance claims rather than proof of regulatory authorization. No financial-services license or license number is claimed in the reviewed content; for the stated enterprise model, this is a transparency and scope-verification point rather than evidence of a scam. Legal policies are visibly provided in the site navigation, and an external broker-reference check returned no match.

EVIDENCE

- Registration records show creation on 2017-09-28T18:02:39Z, making the domain approximately 8.89 years old; registrar: CSC Corporate Domains, Inc.
- Hosting telemetry identifies AS16509, Amazon.com, Inc., US.
- TLS uses issuer YE1 with DV validation and is valid to 2026-11-09 13:38:40 UTC.
- The homepage links to Legal policies and presents the business model as enterprise subscriptions, licensing, advertising, and related professional services.

What to Verify Next

Before credential or payment interactions, independently confirm the legal contracting entity named in the site's policies and commercial documentation against an authoritative corporate registry. For any subscription or licensing commitment, confirm the applicable terms, cancellation or refund provisions, billing entity, and payment protections through an independently verified channel. If regulated services are later offered beyond the current enterprise software and licensing presentation, confirm the relevant authorization directly with the applicable regulator.

EVIDENCE

- The homepage provides Legal policies and a "Talk to an expert" pathway that can be checked against independently sourced corporate contact details.
- The commercial presentation supports an enterprise contracting review covering service terms, billing, data use, and payment protections.
- The reviewed content does not present a financial-services authorization number, so any change in service scope should trigger a separate licensing check.

Summary Verdict

The website has a high-trust, low-risk posture, and the available evidence is consistent with an established, apparently legitimate corporate website. No contradictions were observed, although the connection between the website and a specific real-world operating entity remains independently unverified.

Infrastructure Integrity

The website is protected by a CDN/WAF layer, which is a useful mitigating control against direct origin exposure and common delivery-layer abuse but is not, by itself, proof of legitimacy. Observed addresses are edge infrastructure, and no origin-server candidate was identified in the assessment.

EVIDENCE

- CDN/WAF edge addresses observed: 15.197.167.90 and 3.33.186.135.
- Both observed edge addresses resolve through AS16509.
- Origin candidate count: 0; edge IP count: 2.
- Hosting country: US; registry: ARIN.

Closing Assessment

Normal browsing is proportionate to the assessed posture, while independent confirmation of the contracting entity, commercial terms, and payment protections should precede credential submission or paid engagement.

Written analysis generated 2026-08-17 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Signals weighed against the site

- AbuseIPDB: 5 reports on hosting IP 3.33.186.135 (Amazon Technologies Inc., Content Delivery Network), 0% confidence. The reports are attributed to shared infrastructure, not specifically to this website.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of stackoverflow.co.

- The request stayed on stackoverflow.co. It was not redirected to another domain.

CLEAR
- Registration is published under CSC Corporate Domains, Inc..

CLEAR

- DNS for this domain is served by nsone.net, across 4 name servers. NOTED
- The registration is paid up to 2026-09-27. NOTED
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about stackoverflow.co at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
