

Is star-domain.jp legit? TrustSniffer's high-trust assessment: 80/100

star-domain.jp

Verdict

80

OUT OF 100

HIGH TRUST

star-domain.jp appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-11 by automated analysis. Classification confidence 75%.

WHAT THIS SITE APPEARS TO BE

Japanese domain registration and hosting provider landing page (スタードメイン) advertising low-cost domain pricing, free bundled hosting, SSL services, support resources, and corporate trust certifications. Contains marketing copy, pricing examples, and links for account login and ordering.

Evidence status and limitations

Evidence completeness: UNKNOWN

- The real-world operator identity was not independently verified.
- Module-level completeness metadata is unavailable for this legacy report.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2009.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a Japanese commercial domain-registration and hosting service presenting low-cost domain names, bundled high-performance hosting, SSL certificates, support resources, account access, and online ordering. Its apparent business model is revenue from domain registrations, transfers, hosting, and related SSL services, with standard ecommerce and customer-account functionality.

Scam/Impersonation Risk

No contradictions were observed across the supplied evidence. The homepage presents a coherent domain-services business, with no detected phishing, impersonation, malicious-content, or other page-level fraud indicators. Automated interaction testing identified limited anomalous network and page-change signals, including one non-whitelisted post, but it found no hidden forms, externally submitted password fields, wallet activity, clipboard manipulation, or cloaking; these low-level signals do not establish deceptive behavior. The site's historical continuity and external reputation are consistent with an established website, although the real-world operator identity remains independently unverified.

EVIDENCE

- The homepage describes domain registration, hosting, SSL, support, login, and ordering services and contains no reported red flags or brand-impersonation indicators.
- The domain was registered on 2009-02-12 and is approximately 17.5 years old.
- Historical records show 602 snapshots spanning 2009–2026, covering 18 years with a maximum recorded gap of 1 year.

Regulatory Verification Notes

The service presented is commercial domain registration and hosting rather than a regulated financial product. The available page content describes pricing, hosting benefits, SSL services, support, and corporate trust certifications, but does not provide a license number or regulatory authorization; this is a disclosure point for ordinary commercial due diligence, not evidence of a scam. The site appears legitimate and established on the available evidence, but the operator's legal identity is not independently verified. External reputation checks were clean, and no relevant broker-dataset match was identified.

EVIDENCE

- The homepage advertises domain names from 100 yen per year, bundled hosting, SSL certificates, customer support, and account-ordering functions.
- Confirmed technical evidence identifies hosting on AS131965 operated by XSERVER - Xserver Inc., JP.
- Confirmed technical evidence records a DV TLS certificate issued by CloudSecure RSA Domain Validation Secure Server CA 3, valid through 2027-01-02.
- The domain appears within the top 1 million of the observed global traffic ranking, with a recorded rank of 29832.

What to Verify Next

Before credential or payment interactions, an organization should independently confirm the site's legal operator and applicable business terms through an authoritative corporate or domain-industry source. The renewal prices, cancellation and transfer conditions, refund policy, support escalation route, and payment-protection arrangements should be reviewed before placing an order. If a regulated service is contemplated beyond ordinary domain and hosting provision, any claimed authorization should be checked directly with the relevant regulator.

EVIDENCE

- Independent operator identity verification is recorded as incomplete, despite strong continuity and service-content evidence.
- The supplied page assessment classifies the site as an established, low-risk ecommerce service with no detected sensitive-form or untrusted-destination behavior.

Summary Verdict

The overall posture is **high trust and low risk**, and the available evidence is consistent with an established, apparently legitimate website. No scam, phishing, impersonation, or identity-conflict indicators were observed, while independent confirmation of the real-world operator remains outstanding.

Infrastructure Integrity

The site has no detected CDN or WAF and resolves to one likely origin IP, so no edge-layer protection or origin-masking benefit is evident. Automated DNS heuristics indicated fast-flux-like behavior and infrastructure fragmentation, but these are unconfirmed network characteristics and are not, on their own, evidence of malicious infrastructure.

Closing Assessment

Ordinary browsing and standard service evaluation are proportionate; before submitting credentials or payment details, independent confirmation of the merchant identity, contractual terms, and payment protections should be completed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of star-domain.jp.

- The request stayed on star-domain.jp. It was not redirected to another domain. CLEAR
- DNS for this domain is served by star-domain.jp, across 3 name servers. NOTED
- The registration is paid up to 2027-02-28. NOTED
- The earliest public archive of this site is from 2009-07-25. CLEAR
- It is hosted on XSERVER, from a server in JP. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about star-domain.jp at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
