

Is status-telecom.ru legit? TrustSniffer's high-trust assessment: 80/100

status-telecom.ru

Verdict

80

OUT OF 100

HIGH TRUST

status-telecom.ru appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-08-03 by automated analysis. Classification confidence 70%.

What this site appears to be

Русскоязычный коммерческий сайт компании «Статус-Телеком», предлагающей разработку и продвижение сайтов, внедрение CRM, хостинг, VPS, тестирование и лицензии 1С-Битрикс. Представлены цены, корзина, контакты и статьи, но часть страницы содержит английский Lorem Ipsum и повторяющийся демонстрационный текст, что указывает на незавершенную настройку шаблона.

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2001.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a Russian-language corporate and ecommerce presence for Status Telecom, offering website development, Bitrix24 CRM implementation, software licensing, digital marketing, testing, hosting, VPS services, and data-centre infrastructure through one-off product sales and recurring service fees.

Scam/Impersonation Risk

No phishing, impersonation, conflicting legal identity, or other identity contradiction was observed. The site's long operating history, established traffic footprint, clean external reputation, and consistent Status Telecom branding support its legitimacy. The homepage does contain unfinished English placeholder text and an absolute claim that Bitrix-based sites are "invulnerable," supported by a claim of no compromises during five years of company work; these are content-quality and marketing-precision weaknesses, not evidence of fraudulent conduct.

- The homepage consistently presents the Status Telecom name and describes a coherent portfolio of IT, hosting, CRM, and software-reselling services.
- The homepage exposes no hidden form, external password form, suspicious inline script, wallet interaction, clipboard hijacking, cloaking, or brand-impersonation behavior.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no reported malicious browsing status, no abuse reports, and no signature matches; the domain holds a global traffic rank of 61,602.
- Archive records contain 152 snapshots spanning 2001–2026, representing 26 years of tracked history, with no detected suspicious repurposing or semantic drift.

Regulatory Verification Notes

The captured homepage identifies a commercial IT-services brand, publishes pricing and contact information, and presents a standard ecommerce model. It does not make a regulated financial-services claim, and the available material does not establish that sector-specific licensing is applicable. The homepage does not, however, provide sufficient legal-page evidence to confirm the contracting entity's formal registration particulars; this is a limited procurement-transparency matter rather than a scam indicator.

- The homepage advertises 1C-Bitrix and Bitrix24 licenses alongside web development, CRM implementation, testing, marketing, hosting, and VPS services.
- The homepage includes catalogue, cart, login, registration, pricing, contact, and article functions consistent with a commercial service provider.

- WHOIS records show registration on 16 July 2011 through REGRU-RU, approximately 15.06 years old, with expiration on 16 July 2027.
- The hosting infrastructure is served from AS59557 (ASSTATUSTELECOM — Status Telecom Ltd., RU); the site's DV TLS certificate was issued by YE1 and is valid until 4 October 2026.

What to Verify Next

Prospective enterprise customers should confirm the legal contracting name, registration particulars, billing entity, service-level commitments, data-processing terms, backup arrangements, and incident-response obligations in the formal quotation or contract. Software-license purchasers should also confirm entitlement delivery and vendor-support terms, while hosting customers should establish applicable data location, retention, recovery, and availability commitments through the normal procurement process.

- The homepage provides a telephone number and a domain-based administrative contact address, enabling independent commercial confirmation before contracting.
- The homepage promotes hosting, VPS, CRM, and software-license services for which contractual service scope, support responsibility, and data-handling terms are operationally material.
- The captured page includes some Lorem Ipsum and repeated demonstration content, making formal contractual documentation a more reliable source for detailed service terms than marketing copy alone.

Summary Verdict

The site is a legitimate, established, and trustworthy commercial IT-services website. Its durable provenance, coherent business identity, substantive commercial content, established usage footprint, clean threat reputation, and benign observed behavior converge on a high-confidence posture with no contradictory risk signals.

Infrastructure Integrity

The site resolves directly to a single likely origin in Russia and does not use a detected CDN or WAF. This direct-hosting architecture provides no edge-layer masking or mitigation, but the infrastructure is internally consistent with the operator's telecommunications and hosting identity and presents no confirmed infrastructure risk signal.

Closing Assessment

Normal interaction, including account login and standard use, is appropriate; organizations considering paid or managed services should apply routine vendor-onboarding and contractual due diligence.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

About this assessment

A trust score summarises the evidence TrustSniffer could collect about status-telecom.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
