

Is swapcard.com legit? TrustSniffer's high-trust assessment: 100/100

swapcard.com

Verdict

100

OUT OF 100

HIGH TRUST

swapcard.com appears legitimate.

Our checks found nothing pointing to fraud. Ordinary care still applies when you pay or sign in.

Not Scam

Safe for Login

Low Risk

Assessed 2026-07-31 by automated analysis. Classification confidence 75%.

What this site appears to be

Swapcard markets an enterprise event-management platform that combines registration, attendee engagement, exhibitor operations, monetization, AI-assisted matchmaking, onsite access, and analytics. The page targets professional event organizers and promotes demonstrations and free trials while presenting customer case studies, integrations, support, legal resources, and security credentials.

Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2001.
- VirusTotal and Google Safe Browsing had no flags for this domain; its hosting IP carries AbuseIPDB reports below the confidence level TrustSniffer treats as a flag.

Full analysis

Overview

Swapcard is an enterprise event-management software platform for trade shows, conferences, associations, media companies, nonprofits, and professional communities. It presents registration, ticketing and payments, onsite access, attendee networking, exhibitor and sponsor operations, monetization, AI-assisted matchmaking, analytics, integrations, and professional services, with demonstrations and free trials supporting a subscription and enterprise-contract business model.

Scam/Impersonation Risk

No identity contradictions, brand impersonation, phishing indicators, deceptive financial-return claims, or other fraud signals were observed. The domain has a long-established registration and substantial historical continuity, while evaluated threat-reputation sources returned no malicious or suspicious classifications. The homepage's newsletter form did not request sensitive information or submit to an untrusted destination, and interactive testing found no cloaking, hidden forms, credential forwarding, clipboard interference, or wallet-related activity.

- Domain registration records show registration in 1999 (~27.42 years old) through Amazon Registrar, Inc., with expiry on 6 March 2027.
- The web archive contains 559 snapshots spanning 24 February 2001–28 July 2026 (26 years tracked), with no suspicious repurposing or semantic drift confirmed.
- External reputation telemetry recorded 0 malicious and 0 suspicious classifications, no safe-browsing threat finding, and no external threat-list hit for the assessed domain.
- The homepage contained one newsletter-signup form; page inspection found no sensitive fields, hidden forms, untrusted submission destination, or login-form impersonation.

Regulatory Verification Notes

The website represents a conventional B2B SaaS offering rather than a financial, investment, brokerage, or cryptocurrency service; no regulated-finance licensing claim is made, and the observed business model does not inherently require such a claim. The homepage references legal resources, data privacy, account security, and security certifications, but the supplied page evidence does not establish the exact contracting entity, certification identifiers, or jurisdiction-specific terms. These are procurement and disclosure-validation matters, not evidence of illegitimacy, and no adverse broker-profile match was identified.

- The homepage identifies the service as event-management software and presents legal, support, privacy, account-administration, and security resources.
- The homepage states that security credentials are available, but the assessed content does not provide their names, scope, audit period, or certificate identifiers.
- The assessed pages make no brokerage, investment, token, yield, or financial-regulatory claim.
- The third-party broker-intelligence dataset produced no matching broker profile for the website.

What to Verify Next

Enterprise onboarding should include confirmation of the legal contracting party, applicable terms, privacy documentation, data-processing arrangements, subprocessor coverage, and the scope and currency of any claimed security certifications. Procurement teams should also validate whether the proposed deployment supports required access controls, integrations, payment handling, retention policies, and service commitments through the formal sales and contracting process.

- The homepage offers demonstrations and free trials, providing an established route for validating the proposed deployment before contracting.
- The product materials advertise enterprise integrations and account-administration and security capabilities, making configuration-specific review appropriate.
- The platform handles registration, ticketing, payments, attendee information, access control, and reporting, creating a legitimate need for privacy, payment-flow, and retention review.
- Customer case studies, support resources, and professional-services materials are presented on the homepage as sources for operational due diligence.

Summary Verdict

The website is a legitimate, established, and trustworthy enterprise software presence. Its longstanding provenance, clean threat reputation, mature commercial presentation, coherent service model, and benign observed behavior converge strongly, with no contradictory risk indicators. Normal interaction, including account login and standard platform use, is appropriate.

Infrastructure Integrity

The website is protected by Cloudflare's CDN/WAF, and the observed address was an edge server rather than a confirmed origin host. This reduces direct origin exposure and provides a mainstream protective layer, although infrastructure protection is a mitigating security control rather than independent proof of business legitimacy.

- The hosting infrastructure served the site from AS209242 (CLOUDFLARESPECTRUM – Cloudflare London, LLC, US), with observed edge address 198.202.211.1.
- The site's transport encryption used a WE1-issued domain-validated TLS certificate, valid to 20 October 2026.
- All observed addresses were classified as Cloudflare edge infrastructure; no origin candidate was identified.

Closing Assessment

Prospective users may proceed with ordinary access and account use, while organizations considering enterprise adoption should complete their standard security, privacy, and contractual due-diligence process.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of swapcard.com.

- The request stayed on swapcard.com. It was not redirected to another domain. CLEAR
- Registration is published under Amazon Registrar, Inc.. CLEAR
- DNS for this domain is served by awsdns-47.org, across 4 name servers. NOTED
- The registration is paid up to 2027-03-06. NOTED
- The earliest public archive of this site is from 2001-02-24. CLEAR
- It is hosted on CLOUDFLARESPECTRUM, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about swapcard.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
