- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2019.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Techeconomy.ng is a Nigerian technology, business, and economy news portal presenting breaking news, editorial analysis, interviews, branded content, video programming, and newsletter engagement for an audience interested in technology, business, and economic developments.

Scam/Impersonation Risk

No contradictions were observed. The homepage presents a coherent news-media identity, with named editorial sections and stories covering technology, fintech, business, cybersecurity, and the African technology ecosystem. It does not present phishing forms, wallet-connect flows, financial-return promises, or deceptive interaction patterns. External reputation checks were clean, and the site showed no confirmed malicious, phishing, impersonation, or blacklist indicators.

- The homepage identifies the service as “Tech | Business | Economy Portal” and displays breaking stories, features, branded content, and video programming.
- The homepage contained no login form, hidden form, sensitive data form, or untrusted submission destination.
- The domain was registered on 2017-09-28 and is approximately 8.85 years old.
- Historical coverage records 262 snapshots across 2019–2026, spanning 8 tracked years.

Regulatory Verification Notes

The site operates as an editorial, advertising, sponsored-content, and video-media publication rather than a platform primarily requesting deposits or promising financial returns. Its company and policy links support a conventional publishing presence, although no specific regulatory licence or licence number is presented for verification. Any commercial, advertising, or content-partnership engagement should therefore be assessed under the relevant contractual and organizational requirements; this is a transparency matter, not an identity contradiction. The registrar is TRUEHOST CLOUD.

- The homepage presents technology, business, economy, features, brand-content, and television sections rather than regulated financial products.
- The site’s content model is editorial publishing supported by advertising, sponsored or branded content, video media, and possible newsletter engagement.
- The domain is registered through TRUEHOST CLOUD; the recorded registration date is 2017-09-28.

- The site is hosted on AS13335, Cloudflare, Inc.; its TLS certificate is issued by WE1 using DV validation and is valid through 2026-10-29.

What to Verify Next

For any formal commercial engagement, confirm the contracting entity, invoicing details, and applicable publishing or advertising terms through the site's company and policy pages. Where a transaction involves regulated services supplied by a third party, verify that third party’s authorization independently with the relevant authority.

- The homepage provides company and policy navigation suitable for confirming operational terms.
- The site identifies itself as a news and media publication, making the relevant verification focus contractual and commercial rather than deposit-taking authorization.
- The homepage offers article-submission and branded-content pathways that can be reviewed before engagement.

Summary Verdict

The website presents as a legitimate, established, and trustworthy news-media organization with a coherent identity, sustained editorial purpose, and no observed contradiction or abuse signal. Normal interaction, including account login where offered and standard use of the site, is appropriate.

Infrastructure Integrity

Cloudflare CDN/WAF protection provides a meaningful mitigating control for edge exposure and traffic handling. All observed addresses were CDN edge infrastructure, and no origin-server candidate was identified in the analysis; this supports infrastructure resilience but is not, by itself, proof of legitimacy.

Closing Assessment

Normal browsing and standard site interaction are appropriate, with ordinary organizational due diligence retained for consequential commercial engagements.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of techeconomy.ng.

- The request stayed on techeconomy.ng. It was not redirected to another domain. CLEAR

About this assessment

A trust score summarises the evidence TrustSniffer could collect about techeconomy.ng at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
