- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2013.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

This website is TechInsider, a Russian-language technology and science news publication covering technology, science, space, automobiles, gadgets, artificial intelligence, and related current affairs. Its apparent business model is an ad- and content-supported editorial publication, with articles, news updates, newsletters, community rules, privacy information, and contact facilities presented to visitors.

Scam/Impersonation Risk

No scam, phishing, impersonation, blacklist, or conflicting-identity indicators were observed. The site's editorial content, publisher disclosures, sustained historical presence, clean external reputation, and established traffic footprint converge on an apparently legitimate publication rather than an abuse-oriented site. Behavioral testing did observe external network activity, but it did not identify hidden forms, credential collection, wallet-drainer behavior, clipboard manipulation, or cloaking; the activity therefore does not constitute a contradiction to the overall assessment. The real-world operator connection remains independently unverified, so the site's legitimacy is evidence-consistent rather than proven.

EVIDENCE

- The homepage presents current Russian-language articles under the TechInsider brand, with science, technology, space, automotive, gadget, and AI coverage.
- Domain registration: created 2018-12-29T14:02:17Z; registered 2018 (~7.62 years old).
- Web-archive record: 1,075 snapshots spanning 2013–2026 (14 years tracked); no suspicious repurposing or semantic drift was detected.
- External reputation checks recorded 0 malicious detections, 0 suspicious detections, and no phishing or blacklist hit; the domain is within the global top 1 million by traffic.

Regulatory Verification Notes

The reviewed pages identify the publication as “Сетевое издание TechInsider” and name ООО «Фэшн Пресс» as the founder, alongside Moscow address information and links to community rules, privacy information, and contacts. No financial-services license or registration number is presented, but the observed business model is editorial news rather than a financial service; this is therefore a transparency and scope-check item, not evidence of a scam. A third-party broker-context check produced no match, which provides limited contextual support but is not a licensing or regulatory determination. Transport security is present through a valid domain-validated TLS certificate, while the registration record identifies RU-CENTER-RU as registrar.

EVIDENCE

- The homepage/footer identifies “Сетевое издание TechInsider” and ООО «Фэшн Пресс» as founder, with publisher and editorial address information.
- Domain registrar: RU-CENTER-RU; expiration date: 2026-12-29T14:02:17Z.
- TLS certificate: issuer YR1, validation level DV, valid to 2026-11-06.
- The reviewed legal and contact pages contain publication, privacy, community, and contact references but no financial license number.

What to Verify Next

Before any credential or payment interaction associated with the publication, an independent check should confirm that the named publisher and address correspond to the relevant corporate record and that any applicable consumer, subscription, or advertising terms are clearly stated. Official contact channels should be confirmed through an independently sourced route, and payment-protection options should be established before a transaction is initiated.

EVIDENCE

- The homepage provides publisher and editorial identity details that can be compared with an independent corporate registry.
- The site exposes separate links for contacts, privacy information, and community rules, providing reference points for reviewing operational terms.
- No login form or sensitive form was observed on the reviewed homepage; any later request for credentials or payment should therefore be assessed as a distinct interaction.

Summary Verdict

Available evidence supports a **high-trust, low-risk posture** consistent with an established, apparently legitimate website. No contradictory scam or impersonation signals were identified. The operator's real-world identity is not independently verified, so the positive assessment should be understood as evidence-based confidence rather than proof of ownership.

Infrastructure Integrity

The site is hosted by YandexCloud – Yandex.Cloud LLC in Russia and does not use a detected CDN or WAF edge layer. Direct hosting provides a clear infrastructure attribution but less intermediary shielding than a mainstream edge network; this is a technical characteristic and neither establishes nor undermines legitimacy on its own.

EVIDENCE

- Hosting infrastructure: AS200350, YandexCloud – Yandex.Cloud LLC, RU; resolved IP 51.250.102.195.
- Infrastructure resolution identified 1 unique IP, 0 edge IPs, and 1 likely origin IP; no CDN vendor was detected.

Closing Assessment

Ordinary browsing and editorial use are proportionate to the assessed posture; before credential or payment interactions, independent publisher-identity, terms, contact-channel, and payment-protection checks should be completed.

Written analysis generated 2026-08-11 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	60%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of techinsider.ru.

- The request stayed on techinsider.ru. It was not redirected to another domain. CLEAR
- Registration is published under RU-CENTER-RU. CLEAR
- DNS for this domain is served by ru., across 3 name servers. NOTED
- The registration is paid up to 2026-12-29. NOTED
- The earliest public archive of this site is from 2013-10-08. CLEAR
- It is hosted on YandexCloud, from a server in RU. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about techinsider.ru at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
