- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2020.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Telecom Foz is a Brazilian commercial telecommunications provider offering fiber-optic internet, fixed-line telephone services, and premium television packages to residential and business customers in Paraná, supported by published pricing, promotions, service conditions, branch information, and customer-support channels.

Scam/Impersonation Risk

No phishing, impersonation, blacklist, or conflicting-identity indicators were observed. The homepage presents a coherent telecom subscription business with detailed plans, prices, connection speeds, television channel packages, support information, and customer-service pathways. The domain also has established historical continuity and clean external threat findings, supporting the conclusion that it is a legitimate operating website.

- The homepage identifies Telecom Foz and presents fiber, digital telephony, and premium-TV subscriptions with residential and business pricing.
- The homepage provides support details, branch addresses, contracts, customer-portal access, and service-related navigation.
- The domain has 50 archive snapshots spanning 2020–2026, with 7 years tracked.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no blacklist or phishing finding.

Regulatory Verification Notes

The site provides commercial terms, contracts, privacy information, customer support, and business contact details. No specific licensing or registration number was identified in the supplied website content; this is a transparency item for independent confirmation, not evidence of impersonation or fraud. The available third-party broker context contains no match, and the site's established commercial presentation is consistent with a conventional telecom provider.

- The site's contracts and service-condition pages provide customer-facing commercial documentation.
- The homepage and contact content identify support channels and branch locations in Paraná, Brazil.
- The domain was registered on 2018-11-30 and is approximately 7.68 years old.
- Hosted on AS53107 (EVEO S.A., Brazil); TLS certificate issued by YR2 at DV validation level, valid to 2026-09-28.

What to Verify Next

For regulated procurement or enterprise onboarding, confirm the provider’s legal and telecommunications authorization details through the relevant Brazilian registry and validate the published branch and support channels independently. Standard account login and ordinary service use are appropriate.

- Confirm licensing or registration details against the relevant Brazilian telecommunications authority.
- Match the contractual entity and service terms against the information supplied during onboarding.
- Validate support and branch details through an independently obtained contact route.

Summary Verdict

Telecom Foz presents as a legitimate, established, and trustworthy commercial website with a coherent business model, sustained web presence, clean reputation, and no observed contradiction signals. The overall posture supports normal interaction, including account login and standard account actions.

Infrastructure Integrity

The site resolves directly to infrastructure operated by EVEO S.A. in Brazil on AS53107, with no CDN or WAF identified. A valid DV TLS certificate provides transport protection, while the directly resolved hosting arrangement should be understood as a normal infrastructure characteristic rather than proof of legitimacy.

Closing Assessment

Prospective customers and enterprise counterparties may proceed with normal engagement, subject to routine confirmation of contractual and regulatory details appropriate to the transaction.

Written analysis generated 2026-08-02 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

About this assessment

A trust score summarises the evidence TrustSniffer could collect about telecomfoz.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
