

# Is togethers.tv a scam? TrustSniffer's high-risk assessment: 5/100

togethers.tv

## Verdict

5

OUT OF 100

CRITICAL RISK

togethers.tv shows high-risk / scam indicators.

This assessment found strong scam indicators. Do not pay, sign in, or share personal details with this site.

Sensitive Interaction Risk

Governance Risk

Assessed 2026-09-21 by automated analysis. Classification confidence 55%.

What this site appears to be

Landing page for Togethers Watch Party, a service/app that offers multiplayer web browsing and synchronized watch parties with features like private rooms, chat, and invite links. Content focuses on product benefits and user testimonials; no financial investment or credential-harvesting indicators present in the supplied HTML.

## Evidence status and limitations

- Evidence completeness: UNKNOWN
- The real-world operator identity was not independently verified.
  - Module-level completeness metadata is unavailable for this legacy report.

## At a glance

## The page as captured

<https://togethers.tv/>

What togethers.tv served when TrustSniffer captured it on 2026-09-21. The page may look different now.

## Key findings

- Automated classification: Sensitive Interaction Risk.
- Domain age: less than 1 year (registration continuity).
- Public web-archive history exists since 2026.
- At least one reputation service TrustSniffer consulted had flagged this domain at assessment time.

## Full analysis

### Security Alert

Fortinet, Kaspersky, Sophos flagged this site in external intelligence checks, indicating elevated compromise/scam exposure that requires immediate caution.

Togethers.tv presents itself as the landing page for Togethers Watch Party, a software service for synchronized online viewing and shared web browsing. It promotes multiplayer browser rooms, private sessions, chat, invite links, shared browser control, and app access for watching videos with friends or communities; the apparent business model is software adoption with possible subscription or premium features.

### Scam/Impersonation Risk

The site's apparent product presentation is coherent and does not, in the supplied homepage content, show credential-harvesting forms, financial-investment claims, wallet activity, or explicit brand impersonation. However, this benign page-level presentation is materially outweighed by confirmed external threat detections: the domain is blacklisted, and multiple security providers classified it as malicious or suspicious. The site's identity is also not independently verified. Accordingly, the principal risk is not the advertised watch-party concept itself, but the possibility that a superficially professional application landing page is associated with a

compromised, malicious, or otherwise unsafe web presence. Login, credential submission, downloading software, and financial interaction should be treated as sensitive actions requiring strong independent validation.

#### EVIDENCE

- External reputation telemetry recorded 14 malicious and 4 suspicious detections across 23 evaluated results; three security providers generated threat detections.
- The domain was confirmed on external blacklists; a separate major safe-browsing source did not report a malicious result, so the signals are not uniform but remain materially adverse.
- The homepage describes a watch-party and shared-browser application and contains no login form, sensitive submission form, or wallet-connection behavior in the supplied content.
- Domain registration telemetry records creation on 2026-07-19 and an age of approximately 0.17 years.

### Regulatory Verification Notes

The supplied homepage describes a SaaS application rather than a financial or regulated investment service, and no licensing claim or registration number is visible in the supplied content. That absence is a disclosure gap rather than, by itself, evidence of fraud; nevertheless, the operator's real-world identity remains unverified, so the product description cannot be treated as proof of a legitimate corporate entity. The visible presentation includes promotional statements such as "Over 1 Million" hours streamed and a Trustpilot reference, but the supplied page does not provide enough corporate, contractual, or pricing detail to independently substantiate those claims.

#### EVIDENCE

- The homepage identifies the product as "Togethers Watch Party" and describes a software service, but does not display a legal entity name, licensing statement, or registration number.
- The homepage includes promotional usage and trust statements, including "Over 1 Million" hours streamed and a Trustpilot reference, without supporting corporate or contractual detail.
- Domain registration is through Hosting Concepts B.V. d/b/a Registrar.eu; this registrar fact does not independently establish the operator's identity or legitimacy.

### What to Verify Next

Before any sensitive interaction, an independent source should confirm that the application, domain, and stated operator correspond to the same legitimate software publisher. Any downloadable component should be assessed by an enterprise security process before execution, and account, payment, privacy, refund, and support arrangements should be obtained from independently verified corporate channels rather than relying solely on the landing page. If the service is intended for organizational use, security review should include endpoint behavior, permissions, data handling, and the provenance of any installer.

#### EVIDENCE

- The homepage presents a “Download” and “Get started” pathway, creating a software-execution decision point that warrants endpoint review.
- Pricing details, subscription terms, and refund conditions are not visible in the supplied page content.
- The supplied content provides testimonials and product claims but does not independently verify the operating entity behind them.

### Summary Verdict

The overall posture is **critical trust risk**. The professional SaaS presentation does not overcome the confirmed blacklist and malicious-detection evidence, and the available material does not independently establish the operator's identity. Sensitive interaction should therefore be considered unsuitable absent separate, reliable validation.

### Infrastructure Integrity

The site resolves directly to a single hosting address rather than a detected CDN edge, with hosting attributed to KEYUBU – KEYUBU Internet ve Bilisim Tic. Ltd. Sti. in Türkiye and network identifier AS210538 under the RIPE NCC registry. Transport encryption is present, but it is domain-validated only; this provides channel encryption, not proof of operator legitimacy or content safety.

#### EVIDENCE

- Served from AS210538, hosted by KEYUBU – KEYUBU Internet ve Bilisim Tic. Ltd. Sti.; infrastructure data records country as US and one resolved IP address, 31.77.112.32.
- No CDN or WAF vendor was detected; one likely origin address was identified.
- TLS certificate issuer is YR2, validation level DV, valid to 2026-12-20T05:48:03+00:00.

### Closing Assessment

The proportionate course is to defer login, credential submission, software installation, and payment activity until the operator, distribution channel, and application security have been independently validated.

Written analysis generated 2026-09-21 by the TrustSniffer Analysis Engine from the evidence in this report.

### What the analysis found

2 findings contributed to this verdict, raised by registration and ownership, analysis engine, external reputation.

#### 01 Governance Risk

- The registration record withholds contact details for the operator.  
Registration and ownership rule:KF\_WHOIS\_HIDDEN
- Registration details are held behind a privacy service, so no operator is named publicly. This is common and legal, and it also means there is nobody to check.  
Registration and ownership rule:KF\_WHOIS\_PRIVATE

02 Sensitive Interaction Risk

- The analysis matched a pattern TrustSniffer treats as a direct threat to a visitor.  
*Analysis engine signal:direct\_threat*
- An external threat feed lists this domain: either Google Safe Browsing marked it malicious, or a significant number of malware engines flagged it.  
*External reputation rule:EXT\_BLACKLIST\_CRITICAL*

Identity verification

|                                  |            |
|----------------------------------|------------|
| Status                           | UNVERIFIED |
| Identity score                   | 30/100     |
| Identity verification confidence | 25%        |

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of togethers.tv.

- The request stayed on togethers.tv. It was not redirected to another domain. CLEAR
- Registration is published under Hosting Concepts B.V. d/b/a Registrar.eu. CLEAR
- DNS for this domain is served by dns-parking.com, across 2 name servers. NOTED
- The registration is paid up to 2027-07-19. NOTED
- The earliest public archive of this site is from 2026-08-10. CLEAR
- It is hosted on KEYUBU, from a server in US. NOTED

## About this assessment

A trust score summarises the evidence TrustSniffer could collect about togethers.tv at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
