- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2001.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is an established Portuguese-language local news and community portal serving Toledo, Paraná, presenting current reporting, employment listings, events, cinema schedules, public-service information, local promotions, lost-and-found notices, pet adoption listings, and market quotations through an advertising- and promotion-supported publishing model.

Scam/Impersonation Risk

No identity contradictions, phishing behavior, brand impersonation, or other scam indicators were observed. The homepage contained no login or sensitive-data form, and behavioral testing found no hidden forms, credential forwarding, wallet interaction, clipboard manipulation, cloaking, or suspicious inline scripts. Its extensive historical record and continuing news-oriented presence further support genuine operation rather than a recently created impersonation property.

- Domain provenance records show an archive-derived age of approximately 25.04 years, while the current WHOIS registration record was created on 22 June 2014 and reports an age of approximately 12.12 years.
- The web archive contains 770 snapshots spanning 20 July 2001–3 August 2026, covering 26 tracked years; the historical samples provide no evidence sufficient to establish suspicious repurposing.
- The homepage presented current, Toledo-specific reporting and community material without detected brand-impersonation elements.
- Two completed behavioral test runs detected no hidden forms, external password forms, cloaking, wallet-drainer activity, or clipboard hijacking.

Regulatory Verification Notes

The site presents itself as a local publisher rather than a financial, brokerage, investment, or deposit-taking service. Its navigation includes “Quem Somos,” “Expediente,” “Fale Conosco,” and a privacy-policy page, providing appropriate institutional routes for a community-news operation. No financial licence is claimed, and none is expected from the business model evidenced here; the supplied page material does not establish the precise legal-entity details contained within those institutional pages. No relevant broker-profile match was identified, which is neutral in this non-financial context.

- The homepage identifies the property as “Toledo News” and categorizes its material across local affairs, policing, sport, employment, events, commerce, adoption, cinema, and public services.
- The site’s navigation exposes institutional, editorial-staff, contact, and privacy-policy pages.

- WHOIS identifies Gilmar Angelo Severino as the registrant and records expiration on 22 June 2031.
- The site is served from AS270517 (tryideas ltda, Brazil); its DV TLS certificate was issued by YR1 and is valid until 9 October 2026.

What to Verify Next

For enterprise onboarding, advertising purchases, sponsored-content placements, or reliance on published notices, the contracting party should be matched to the identity and billing details presented through the site's institutional channels. Editorial accountability, privacy handling, and the distinction between journalism and paid promotion should also be reviewed against the relevant site pages.

- The homepage visibly distinguishes community reporting from commercial promotions, including local retail, restaurant, media, towing-service, and event offers.
- The homepage links to Facebook, Instagram, and WhatsApp presences that can be cross-checked as independently controlled public channels.
- No sensitive-input form or untrusted form destination was present on the assessed homepage.
- The captured homepage contained substantial current material across ten identified community-topic areas rather than parked-domain or placeholder content.

Summary Verdict

The evidence supports a legitimate, established, and trustworthy local-media website with no observed contradictions or material fraud indicators. Its historical continuity, identifiable operating context, clean external reputation, substantive current content, and benign tested behavior converge on a high-confidence trust posture. Normal interaction, including account login and standard use where offered, is appropriate.

Infrastructure Integrity

The website uses Cloudflare CDN/WAF protection, with the observed address operating as an edge endpoint and no origin candidate exposed during the assessment. This architecture reduces direct origin exposure and provides a meaningful defensive control, although infrastructure protection alone is not evidence of organizational legitimacy.

Closing Assessment

Prospective users may engage with the site normally; organizations entering a commercial or editorial relationship should apply their standard counterparty and content-governance checks.

Written analysis generated 2026-08-03 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	LIKELY
Identity score	76/100
Identity verification confidence	76%

- Trusted social count=2

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of toledonews.com.br.

- The request stayed on toledonews.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2031-06-22. CLEAR
- The earliest public archive of this site is from 2001-07-20. CLEAR
- It is hosted on AS270517, from a server in BR. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about toledonews.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
