Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 1996.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Tradepage – Evolve Online is a South African B2B technology provider offering IT support, cybersecurity, cloud and productivity software, connectivity, CRM, marketing, development, hosting, voice, and backup services through quoted and subscription-style commercial offerings.

Scam/Impersonation Risk

No contradictions were observed. The site presents a coherent corporate identity, a conventional B2B service model, physical office locations, customer testimonials, legal-policy pages, and no detected phishing, impersonation, malicious, or suspicious-content indicators. Its long-running archival continuity and established registration history materially support the conclusion that this is a genuine operating website rather than a recently created deceptive property.

EVIDENCE

- Registered 1996-04-02; approximately 30.35 years old.
- 621 archive snapshots spanning 1996–2026, tracked across 31 years.
- The homepage identifies Tradepage – Evolve Online and presents a consistent corporate IT-services profile.
- External reputation checks recorded 0 malicious and 0 suspicious detections, with no blacklist or phishing hit.

Regulatory Verification Notes

The site provides legal and operational documentation, including terms and conditions, acceptable-use, complaints, privacy, minors-protection, and access-to-information pages. It also identifies business services with indicative pricing, including email from R30 per user, uncapped LTE from R299, uncapped 5G from R449, uncapped fibre from R395, website hosting from R150, and voice from R65 per user. No specific licensing claim or license number is identified in the supplied content; this is a limited regulatory-transparency point requiring ordinary commercial verification, not evidence of misconduct. The site's clean external reputation and absence of a broker-dataset match provide supportive contextual signals, not a regulatory determination.

EVIDENCE

- Served from AS16509, Amazon.com, Inc. (AMAZON-02), United States.
- TLS certificate issued by YE1, domain validation (DV), valid to 2026-10-13.
- The homepage links to legal policies and identifies offices in Johannesburg, Cape Town, and Durban.
- The page describes B2B IT, connectivity, cloud, communications, development, hosting, and marketing services.

What to Verify Next

For institutional onboarding, confirm the contracting legal entity, service-level commitments, and any sector-specific authorizations directly against the applicable South African registry or regulator. Procurement should also validate the quoted pricing, support obligations, and official contact channels through an independently sourced business record before executing a material agreement.

EVIDENCE

- The site provides a Contact Us pathway, telephone contact, and stated offices.
- Service pages identify specific offerings and indicative prices suitable for comparison with a formal quotation.
- The legal section includes terms, complaints, privacy, and access-to-information documentation.

Summary Verdict

The site has a legitimate, established, high-trust posture supported by strong identity continuity, coherent business content, clean reputation signals, and stable technical operation. Normal interaction, including account login and standard use, is appropriate.

Infrastructure Integrity

The website is protected by Cloudflare CDN/WAF infrastructure, with the observed address operating as an edge endpoint rather than an exposed origin. This provides a meaningful layer of traffic filtering and origin protection, while remaining a mitigating control rather than proof of legitimacy.

Closing Assessment

The website is suitable for normal business engagement, subject to standard procurement, contractual, and regulatory checks proportionate to the value and nature of the proposed service.

Written analysis generated 2026-08-01 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100

Identity verification confidence	50%
----------------------------------	-----

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of tradepage.co.za.

- The request stayed on tradepage.co.za. It was not redirected to another domain. CLEAR
- Registration is published under Register Domain SA. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-04-02. NOTED
- The earliest public archive of this site is from 1996-05-10. CLEAR
- It is hosted on AMAZON-02, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about tradepage.co.za at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
