Key findings

- Automated classification: Not Scam.
- Domain age: more than 10 years (registration continuity).
- Public web-archive history exists since 2013.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

The website is a Portuguese-language regional news portal publishing current coverage of Três Passos and Rio Grande do Sul, including municipal affairs, politics, public safety, weather, traffic, health, employment, and community developments, with an apparent advertising- or sponsorship-supported media model.

Scam/Impersonation Risk

No identity contradictions, phishing behavior, brand impersonation, or confirmed malicious reputation signals were observed. The site presents substantial editorial material consistent with its regional-news identity, while its long-established domain and extensive, continuous archival record support provenance rather than opportunistic domain reuse. Interactive testing found no login form, hidden form, sensitive-data collection, wallet functionality, clipboard manipulation, or cloaking. Although external network activity and two inline scripts were flagged for closer behavioral inspection, these observations did not converge with any harmful user-facing mechanism or recognized threat activity.

- The domain record confirms registration in 2012 and an age of approximately 13.96 years; the recorded owner is Luis Carlos Pez.
- The domain's archive contains 5,000 snapshots spanning 2013–2025, representing 13 years of tracked history, with no supported finding of suspicious repurposing or semantic drift.
- External reputation checks recorded 0 malicious and 0 suspicious detections, no malicious safe-browsing classification, no abuse reports, and no signature matches.
- The homepage contained no login, hidden, sensitive, or externally submitted password forms and showed no detected impersonation or phishing indicators.

Regulatory Verification Notes

The site operates as a conventional regional publisher rather than a financial, investment, brokerage, or other regulated transactional service. No regulatory authorization is claimed, and none appears necessary for the business model evidenced by the supplied homepage. The page provides contact and location information and references a privacy policy, although the supplied content does not establish a clearly stated legal-entity name or detailed corporate registration particulars; this is a limited disclosure-quality consideration, not evidence of deception.

- The homepage identifies the service as “Três Passos News” and categorizes its content across local news, government, politics, traffic, police, weather, health, employment, and related public-interest topics.
- The homepage publishes a telephone number, an email address, a location, and a privacy-policy reference.

- The site is served from AS13335 (Cloudflare, Inc., US).
- The site’s transport encryption uses a WE1-issued domain-validated TLS certificate, valid until 2026-09-18.

What to Verify Next

For formal vendor onboarding or source-governance purposes, the publishing entity’s legal name and corporate particulars should be corroborated through the appropriate Brazilian business registry. The privacy policy should be reviewed to determine the controller identity, data-handling purposes, retention terms, and rights process. Official editorial and commercial contact channels may also be confirmed through an independent route before entering into advertising, sponsorship, syndication, or other contractual arrangements.

- The homepage displays a cookie-consent notice, establishing a basis for reviewing the associated consent and privacy terms.
- The assessed page contained no sensitive-data form, so any future commercial engagement would require a separately validated submission channel.
- The supplied homepage describes editorial subject areas but does not expose visible monetization terms or contractual information.

Summary Verdict

The website is a legitimate, established, and trustworthy regional news service. Its coherent editorial identity, durable provenance, clean external reputation, and absence of harmful interaction mechanisms provide mutually reinforcing evidence of legitimacy. Normal interaction, including account login where offered and standard use, is appropriate.

Infrastructure Integrity

Cloudflare provides the site’s CDN and WAF layer, with all four observed addresses operating as edge infrastructure and no origin candidate exposed during the assessment. This mainstream protective architecture reduces direct origin exposure and provides a meaningful security mitigation, although infrastructure protection alone is not proof of organizational legitimacy.

Closing Assessment

Prospective users may engage with the website normally under standard organizational browsing controls, with periodic reassessment if its ownership, business model, or interaction surface materially changes.

Written analysis generated 2026-07-31 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	30/100
Identity verification confidence	50%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of trespassosnews.com.br.

- The request stayed on trespassosnews.com.br. It was not redirected to another domain. CLEAR
- DNS for this domain is served by cloudflare.com, across 2 name servers. NOTED
- The registration is paid up to 2027-08-16. NOTED
- The earliest public archive of this site is from 2013-09-04. CLEAR
- It is hosted on CLOUDFLARENET, from a server in US. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about trespassosnews.com.br at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
