- Automated classification: Not Scam.
- Domain age: 3 to 10 years (registration continuity).
- Public web-archive history exists since 2017.
- No flags from the reputation services TrustSniffer consulted at assessment time.

Full analysis

Overview

Trigon Digipack is a corporate website for a B2B print-packaging provider, presenting packaging design, printing, sustainability, client relationships, and regional contact channels for businesses seeking pouches, labels, cartons, and related packaging solutions.

Scam/Impersonation Risk

No contradictions were observed. The site's stated business model is consistent with an ordinary corporate supplier: it promotes packaging design and production services, client case studies, sustainability initiatives, and commercial engagement through regional offices rather than financial products or high-risk consumer schemes. Technical behavior also showed no login form, hidden sensitive form, wallet interaction, clipboard activity, or suspicious script activity. The available evidence therefore supports an apparently legitimate, low-risk corporate presentation, while independently connecting the website to a verified real-world operator remains incomplete.

EVIDENCE

- The homepage presents Trigon Digipack as a print-packaging company offering pouches, shrink sleeves, self-adhesive labels, in-mould labels, composite canisters, mono cartons, and rigid boxes.
- The site's observed behavior recorded no login form, hidden form, wallet-provider activity, wallet-drainer activity, or clipboard manipulation.
- The domain was registered on 2017-02-08 and is approximately 9.54 years old through the supplied registration record.
- Historical records show 53 archive snapshots spanning 2017–2025, with 9 years tracked.

Regulatory Verification Notes

The website presents a corporate identity and commercial service model rather than a regulated financial activity. Its apparent legitimacy is supported by substantive business content, client references, social-presence links, and consistent regional-office information; however, the operator's real-world identity is not independently verified. No license claim or license number is presented, and the available disclosure state is therefore insufficient for a formal regulatory conclusion. This is a verification matter rather than evidence of scam or impersonation. The domain's privacy-protected registration is an administrative limitation and does not constitute an identity contradiction.

EVIDENCE

- The site is categorized as a corporate/B2B services website and describes commercial packaging contracts and orders rather than regulated investment or payment services.
- Hosting resolves through AS394695, identified as PUBLIC-DOMAIN-REGISTRY - PDR, US.
- The site uses a DV TLS certificate issued by YR2, valid through 2026-10-11.
- The homepage and contact content reference offices in India and Dubai and include business-contact information.

What to Verify Next

Before a commercial order or payment, an independent counterparty check should reconcile the Trigon Digipack business identity, regional office details, and contracting entity through an applicable corporate registry or established business channel. The relevant order terms, delivery obligations, refund or remedy provisions, and payment protections should also be reviewed before funds or credentials are exchanged. Official contact channels should be confirmed through an independently sourced route rather than relying solely on information supplied by the website.

EVIDENCE

- The website provides business contact and regional-office information that can be cross-checked against independent corporate records.
- The stated business model involves client contracts and orders, making contractual terms and payment protections the relevant pre-engagement checks.
- The operator identity remains independently unverified despite the site's established corporate presentation.

Summary Verdict

Available evidence is consistent with an established, apparently legitimate website and supports a high-trust, low-risk posture for its stated corporate purpose. No scam, phishing, impersonation, or identity-conflict indicators were observed, but the positive assessment does not independently prove the real-world operator identity.

Infrastructure Integrity

The site resolves directly to one likely origin IP, with no CDN detected in the supplied infrastructure assessment and no CDN/WAF vendor identified. This infrastructure posture is technically coherent and does not present an identified abuse concern, but hosting configuration alone is a mitigating technical signal rather than proof of corporate identity.

Closing Assessment

The website is suitable for ordinary business review, with independent merchant-identity, contractual, and payment-protection checks completed before credential or payment interactions.

Written analysis generated 2026-08-21 by the TrustSniffer Analysis Engine from the evidence in this report.

What the analysis found

No rule findings contributed to this verdict.

Identity verification

Status	UNVERIFIED
Identity score	55/100
Identity verification confidence	30%

- No on-site identity signals detected

Identity verification measures whether the site can be independently connected to a real-world brand or person. It is separate from the classification confidence.

What TrustSniffer observed

First-party facts recorded during the assessment of trigonds.com.

- The request stayed on trigonds.com. It was not redirected to another domain. CLEAR
- Registration is published under GoDaddy.com, LLC. CLEAR
- DNS for this domain is served by jupiterindia.com, across 2 name servers. NOTED
- The registration is paid up to 2027-02-08. NOTED
- The earliest public archive of this site is from 2017-06-10. CLEAR
- It is hosted on PUBLIC-DOMAIN-REGISTRY, from a server in AE. NOTED

About this assessment

A trust score summarises the evidence TrustSniffer could collect about trigonds.com at assessment time. It is a starting point for your own judgement, not a guarantee: a high score means the signals were consistent with a legitimately operated site, a low or critical score means several risk patterns were present.

TrustSniffer assesses a website from the evidence it can collect at a point in time: domain registration and age, hosting and certificate, the content the site served, and third-party reputation feeds. A score is a summary of that evidence, not a guarantee and not a legal finding. There is no human rating and no user review in it. A site can change after it is assessed.
